PREFACE.

THE Editors cannot ſend the following work into the world, without acknowledging their many obligations to Gentlemen of the Medical Profeſſion, in different parts of Great Britain, who have favoured them with their aſſiſtance, and ſo kindly contributed to render it uſeful. It is, indeed, a very flattering circumſtance to them, that of upwards of one hundred Practitioners, who have honoured them with their correſpondence, only three letters have been received objecting to the propriety and utility of the plan. All the reſt have contained uſeful information, and have in general expreſſed the fulleſt approbation of a work, which, to uſe the expreſſions of one of theſe obliging correſpondents, "promiſes to "be both uſeful and intereſting; uſeful, by facilitating me-"dical correſpondence, and intereſting, by gratifying pro-"feſſional curioſity."

The chief objections made to the work have been grounded on the Editors not making themſelves known, and a fear leſt ſome improper uſe might be made of the information ſent to them. But the Editors, who are influenced by no other motive than a deſire of teſtifying their zeal and reſpect for their profeſſion, have been anxiouſly careful, in the courſe of their work, to avoid giving cauſe of diſguſt to any individual, or to any body of men. Even in their Catalogue of Books the reader may obſerve, that although they have praiſed many, they have cenſured none. Their future publications will be conducted on the ſame liberal plan.

With regard to the preſent Regiſter, the Editors beg leave to obſerve, that the variety of information they have been favoured with, from different counties at home, has made it neceſſary for them to defer ſeveral Foreign Liſts till another year; it is for the ſame reaſon, likewiſe, that very few publications are mentioned after the names of authors in any of the Foreign Liſts, excepting that of Holland.

If this volume ſhould be favourably received, the Medical Regiſter will be made an annual publication; and neither induſtry nor attention ſhall be wanting to render it every year more and more perfect. But as it is from the aid of others that their work muſt derive its chief excellence, the Editors flatter themſelves, that the Gentlemen who have already favoured them with communications, will continue their correſpondence; and that others will be induced to follow their example. They are requeſted to tranſmit their letters to J. MURRAY, Bookſeller, at N° 32, Fleet-ſtreet, on or before the 1ſt of November next.

April 13, 1779.

Grignon, M. sur les epizooties contagieuses, 238

H.

Hampe, J. H. M. D. system of metallurgy, 223
Hardy, James, M. D. on the Devonshire colic, 215
Hazon, M. notice des hommes celebres de la faculté de Paris, 231
Harhvany, Stephen, M. D. de Thermis Varadiensibus, 230
Hauffmann, J. S. de morbis venereis larvatis, 235
Haller, Albert de, bibliotheca medicinæ practicæ, 235
——— elementa physiologiæ corporis humani, 236
——— eloges de, ibid.
Havniensis, acta societatis medicæ, 235
Hudson, Gul. flora Anglica, 216
Hulme, Nathaniel, M. D. his remedy for the stone and gravel, 214
Hunter, John, on the diseases of the teeth, 224
———, William, M. D. his account of Dr. Maty's illness, 226
——— on the section of the symphysis pubis, 228
Hutton, James, M. D. on coal and culm, 216
——— remarks on his pamphlet, ibid.

J.

Jacquin, Nic. Jos. miscellanea Austriaca, 235
Johnson, James, on the internal use of vitriolum album, 221
Johnstone, Edward, case of an obstinate obstipatio, ibid.
Joubert, Nicolaus, circa tres quæstiones ab academia Divon. propositas, 236

K.

Kr'zowitz, Wenceslaus, de tetano, 231

L.

Leslie, P. Dugud, M. D. on the flowers of zinc, 220
Lettsom, John Coakley, M. D. on general inoculation, 226
——— the origin of medicine, 229
Loder, A. de sectione pubis, 235
Levison, G. M. D. on the epidemical sore throat, 215
Lotti, Ignatio, de l'idrofobia, 231
Lyon, avis du college des med. au sujet des cimetieres, 229

M.

Magenise, Daniel, M. D. on the reformation of physic, 223
Marum, M. Van, on electricity, 233
Mills, Samuel Gillam, his account of an extraordinary tumour, 222
Monti, Signor, apologia, 229
Mudge, John, his cure for a recent catarrhous cough, 218
Margraaf, M. on the stone in the bladder, 234
Moreau, M. sur la population de la France, 230
Mingoni, Josephus, de Thermis Patavinis, 231

N.

Navier, M. sur les contrepoisons de l'arsenic, &c. 233

P.

Percival, Thomas, M. D. miscellaneous practical observations, 221
Perfect, W. cases of insanity, &c. 215
Pew, Richard, his account of a wound through the lungs, 221
Pimbiolo, Antonio, delle effluvi de baco de Seta, 232
Poignand, Lewis, his translation of M. Le Roy's account of the section of the pubis, 216
Pryce, William, mineralogia Cornubiensis, 222

ADVER-

ADVERTISEMENT.

THE Reader is requeſted to take notice that in the Home Liſts, the names of the towns and villages, of which the Editors have received accounts from their Correſpondents, are printed in *Italics*, to diſtinguiſh them from thoſe places of which their account is perhaps incomplete, and which are therefore printed in Roman letters. The Editors have not printed the name of any of the counties in Italics, but they believe their Liſts of the following to be complete, viz. CUMBERLAND, DERBY, DORSET, DURHAM, HEREFORD, LEICESTER, NORTHUMBERLAND, SALOP, STAFFORD, WARWICK, WESTMORELAND, WORCESTER, CARDIGAN, CAERMARTHEN, GLAMORGAN, and PEMBROKE. They likewiſe believe that only a very few places are omitted in the following, viz. CORNWALL, DEVON, HANTS, KENT, LANCASTER, LINCOLN, MIDDLESEX, NORTHAMPTON, NOTTINGHAM, OXFORD, SOMERSET, SUFFOLK, SUSSEX, and YORK.

For the ſake of brevity, this mark § is prefixed to the names of ſuch Practitioners as are Members of the Corporation of Surgeons of London.

MEDICAL REGISTER

For the YEAR 1779.

SECT. I.

GREAT BRITAIN.

BOSTON MEDICAL LIBRARY AUG 17 1927

LONDON.

The Royal College of Phyſicians.

BEFORE the reign of Henry VIII. there was no legal reſtraint on the practice of phyſic. In the third year of that reign an act was paſſed, the preamble to which ſets forth that "Foraſmuch as the "ſcience and cunning of phyſic and ſurgery (to the perfect knowlege "whereof be requiſite both great learning and ripe experience) is "daily within this realm exerciſed by a great multitude of ignorant "perſons, of whom the greateſt part have no manner of inſight in "the ſame, nor in any other kind of learning; ſo far forth, that "common artificers, as ſmiths, weavers, and women, boldly and "accuſtomably take upon them great cures, and things of great dif-"ficulty, in the which they partly uſe ſorcery and witchcraft, partly "apply ſuch medicines unto the diſeaſe as be very noxious, and "nothing meet therefore, to the high diſpleaſure of God, great in-"jury to the Faculty, and the grievous hurt, damage, and deſtruction "of many of the king's liege people, moſt eſpecially of them that "cannot diſcern the uncunning from the cunning." The act then goes on to enact that no perſon, ſhall practiſe phyſic or ſurgery within the city of London, or ſeven miles thereof, without being firſt examined and approved by the biſhop of London, or the dean of St. Paul's, (who ſhall call to their aſſiſtance four doctors of phyſic; and for ſurgery, other expert perſons in that faculty) upon pain of being fined five pounds for every month ſuch perſons ſhall practiſe without being thus admitted. By this act ſimilar powers were given to the biſhop of every dioceſe for the examination of perſons practiſing in the country.

Seven years after this, that is in the 10th of Henry VIII. the phyſicians were incorporated into a college, with a power to elect a preſident, to have a common ſeal, to purchaſe lands, and to make ſtatutes and ordinances for the government and correction of the college, and of all perſons practiſing phyſic within ſeven miles of the city. By this charter it is likewiſe enacted, that no perſon ſhall be permitted to practiſe in any county of England or Wales, without having firſt been examined by, and received letters teſtimonial from

the preſident and three or more of the elects, unleſs he be a graduate of Oxford or Cambridge; but even a graduate of Oxford or Cambridge has no right to practiſe within ſeven miles of the city, until he has been admitted of the college. The letters teſtimonial are granted after a ſingle examination, which is in Latin, and commonly on different ſubjects of anatomy, phyſiology, and medicine; and then the name of the perſon to whom they are granted, and the county he means to practiſe in, are regiſtered in the college books. The other privileges conferred by this charter have been confirmed and enlarged at different times ſince. In 1540, (32d of Henry VIII.) an act was paſſed to diſcharge the members of the college from ſerving pariſh offices, and to empower them to depute four of their body annually to inſpect the ſhops of apothecaries. In 1553, (1ſt of Mary) power was given to the preſident to commit to priſon offenders againſt that and former acts paſſed in favour of the college. And more lately ſtill, viz. in 1723, and the 12th of George I. an act was paſſed "for the better viewing, ſearching, and examining of all drugs, medicines, waters, oils, and compoſitions uſed, or to be uſed in medicine, in all places where the ſame ſhall be expoſed to ſale, or kept for that purpoſe, within the city of London and ſuburbs thereof, or within ſeven miles circuit of the ſaid city." This act, after recapitulating the former acts that had been paſſed, enacts that "the cenſors of the college, calling to their aſſiſtance the wardens of the apothecaries, may, in the day-time, enter into any apothecary's ſhop, within ſeven miles of London, to examine the medicines, and may deſtroy all drugs, &c. not meet to be uſed in medicine." Perſons reſiſting ſearch are to forfeit ten pounds.

It was in a great meaſure to the intereſt of the celebrated Linacre, who was phyſician to Henry VIII. and the ornament of the age in which he lived, that the college owed its inſtitution; and he was the firſt preſident after its erection. He continued in that office till his death, which happened ſeven years afterwards; when he bequeathed to the college his houſe in Knight-rider-ſtreet, in which the meetings had been held during his life-time. From this houſe, however, the college afterwards removed to Amen Corner, where the immortal Harvey erected a library and public hall for them in the year 1652, and ſome years after this, brought the deeds of his eſtate, and preſented them in perſon to the college *. This eſtate, which conſiſts of about forty-ſeven acres, is ſituated at Burmarſh in Kent, and is now called the Harvey-land. Dr. Harvey deſired that a part of the rents might go towards an anniverſary oration*, to be ſpoken on the 18th of October, in commemoration of their benefactors, and to promote a ſpirit of emulation in ſucceeding generations. The celebrated founder had the ſatisfaction to be preſent at the firſt meeting, which took place only a few months before his death.

Other members of the college have followed the example of Dr. Harvey. Caldwall, Croone, and Gulſton, at different times have

* This oration is delivered by each fellow in his turn, according to ſeniority.—The laſt, in 1775, was by Dr. Pepys.

bequeathed

bequeathed eſtates to the college, for the purpoſes of annual lectures. Thoſe founded by Caldwall are confined to ſurgery. The Cronian diſcourſes are to be on muſcular motion; the founder, Dr. Croone, who was a Greſham profeſſor, having publiſhed a volume on that ſubject. The Gulſtonian lectures are on any medical ſubject the lecturer chuſes to adopt. Each of theſe inſtitutions is for three lectures, which are to be delivered in Latin.

The college having been conſumed by the fire of London, and the ground being only upon leaſe, a new building was erected near the north-weſt corner of Warwick-lane. This edifice, which eminently deſerves to be conſidered among the noble ornaments of the city, is unlucky in its ſituation, which does not allow it to be ſeen to advantage. The entrance, which is grand, is under an octangular theatre, finiſhing in a dome. This was built by Sir Chriſtopher Wren. The central building, in which are the library and other rooms of ſtate and convenience, was deſigned by Inigo Jones. In this building the college have not been deficient in gratitude to the memory of their benefactors. Beſides an inſcription in honour of Dr. Harvey on the great ſtair-caſe, there is a picture and a buſt of that celebrated man in the principal apartment of the college. Here likewiſe are the buſts of Sydenham and Mead, together with the portraits of ſeveral preſidents of the college, and of many eminent phyſicians. Some of theſe were benefactors to the college; of this number was Dr. Baldwin Hamey, who, in 1728, bequeathed to it his manſion-houſe of Aſhlins, in Eſſex, together with three hundred and fifty-ſeven acres of land; and the ſon of this phyſician was ſo far from being diſpleaſed at his father's munificence, that we find him ſome years afterwards, contributing towards repairing and ornamenting the college. The other principal portraits are thoſe of Veſalius, Sir Theodore Mayerne, (who bequeathed his library to the college) Dr. Radcliffe, Dr. Tyſon, Sir Hans Sloane, and Dr. Freind.

The members of the college are diſtinguiſhed into three claſſes, of fellows, candidates, and licentiates. They all enjoy the ſame privileges in practice, but the two latter have no ſhare in the management of the college. Phyſicians, who have graduated at Oxford, or Cambridge, or at Trinity-college, Dublin, after going through the uſual examinations, are admitted into the claſs of candidates, and the year following are received fellows. Phyſicians who have graduated in any other univerſity are admitted as licentiates. But a member who has been ſeven years a licentiate may, with the approbation of the college, become a fellow. Formerly, bachelors of phyſic were admitted into the claſs of licentiates, but by a late regulation of the college, no perſon can henceforward be examined for a town licence who is not a doctor of Phyſic, of at leaſt twenty-ſix years of age, and who has not ſtudied two whole years in ſome reputable univerſity. Both fellows and licentiates, previous to their admiſſion, undergo three examinations in Latin, at three ſeveral monthly meetings, before the preſident and cenſors, and, if approved of by theſe, are uſually admitted at the next enſuing quarterly meeting.

Nothing can be more liberal and candid than these examinations. There are four ordinary and fixed meetings *(comitia majora et solennia)* of the college in the course of the year. One of these is on the day after St. Michael, for the election of a president, and the other officers of the college. It seldom happens, however, that a new president is appointed every year. The learned and worthy physician, who is now at the head of the college, has been deservedly continued in the chair several years, and this too was the case of his predecessors Dr. Lawrence, and Dr. Reeve: the other officers of the college are four censors, whose business it is, in conjunction with the president, to examine the physicians who present themselves to the college to be admitted as candidates or licentiates: seven elects, out of which number is elected the president, and which are likewise empowered, in conjunction with the president, to examine and grant testimonials to physicians practising in the country: a treasurer, and a register. All these officers are elected from among the fellows. The second meeting is on the day after St. Thomas; the third on the day after Palm Sunday, and the fourth on the day after St. John Baptist. No business can be transacted at either of these meetings, unless the president and twelve fellows are present. Besides these there are monthly, or lesser meetings, *(comitia minora)* which are composed of the president and censors, and are chiefly intended for the examination of physicians, who present themselves to be admitted of the college; or of the president and three or more elects, for the granting of testimonials to physicians practising in the country.

The college, as a body, have published a complete and elegant edition of Dr. Harvey's works; together with three volumes of *Medical Transactions*, a work which is so replete with learned and interesting observations, that it is greatly to be lamented that the publication is discontinued. The last edition of the college Pharmacopœia was published in 1745.

Before we close this account we think it right to observe, that several learned and celebrated physicians, who are members of the college, formed themselves some years ago into a society for the laudable purpose of collecting and publishing such useful facts and observations as might conduce to the advancement of medical science. To this society the public are indebted for the *Medical Observations and Inquiries*, of which five volumes have been published, and which are, or ought to be, in the hands of every practitioner.

A CAT-

A CATALOGUE

OF THE

PRESIDENT, FELLOWS, CANDIDATE, and LICENTIATES, with their Places of Reſidence, and the Dates of their Admiſſion.

President.

William Pitcairn, M. D. (Oxford) F. R. S. Muſ. Brit. Cur. Phyſician to St. Bartholomew's Hoſpital. Warwick-court, Warwick-lane. Admitted Fellow of the College in 1750.

1727 Sir Edward Wilmot, Bart. M. D. F. R. S. Phyſician to the King, and Phyſician-general to the army. Harrington, near Dorcheſter.

1737 Thomas Reeve, M. D. Elect. Throgmorton-ſtreet.

Ambrose Dawson, M. D. Langcliff-Hall, near Skipton, Yorkſhire.
" Obſervations on Human Calculi." Med. Tranſ. vol. II.
" Thoughts on the Hydrocephalus Internus." Vid. Letters and Eſſays by different Practitioners, Art. IX.
" Obſervations on the Hydatides in the Heads of Cattle, ibid. Art. X.

1739 Russel Plumptre, M. D. (Cambridge) King's Profeſſor of Phyſic at Cambridge.

1740 Matthew Morley, M. D. Vauxhall.

THE

The CORPORATION of SURGEONS.

IN our account of the Royal College of Phyſicians, mention was made of the act of parliament which firſt laid a reſtraint on the practice of phyſic and ſurgery in this kingdom. Soon after this, viz. in the 32d year of Henry VIII. the Surgeons were incorporated with the Barbers, under the united title of *Barbers and Surgeons*. There is a painting * extant in Barber's Hall, done by the famous Holbein, the ſubject of which is K. Henry VIII. giving the Surgeons their charter. In the fifth of Charles I. the Surgeons were by letters patent authoriſed to elect ten of their members to be examiners; and it was ordered that no perſon ſhould practiſe ſurgery within the liberties of London and Weſtminſter, or within ſeven miles thereof, without having been previouſly approved by two or more of theſe examiners. This ſanction was a ſufficient authority for practiſing ſurgery in any part of England. The Surgeons continued thus incorporated with the Barbers, till the year 1745, and having the ſame common hall, which was built by Inigo Jones. In this hall there was a ſpacious theatre for anatomical lectures. At that period the Surgeons applied to parliament for a ſeparation, which they ſet forth would greatly contribute to the improvement of ſurgery. An act was accordingly paſſed, making them diſtinct and ſeparate companies, and the Surgeons were incorporated anew by the name of the *Maſters, Governors, and Commonalty of the Art and Science of Surgeons of London.*

By this act they were confirmed in the poſſeſſion of all their former privileges, and empowered to elect a maſter, two wardens, and a court of aſſiſtants, conſiſting of twenty-one perſons, ten of whom are examiners: but the fine hall in Monkwell-ſtreet, and the eſtates of the united company were given to the Barbers, excepting the ſum of five hundred and ten pounds, and a rent-charge of ſixteen pounds, which had been given to the united company, the former by Edward Arris, for annual lectures on the muſcles, and the latter by John Gale, for one anatomical lecture. Both theſe were aſſigned over to the Surgeons. There were other clauſes in this act to enable the new company to make by-laws, and to elect a maſter and wardens annually, on the firſt Thurſday in July. They were likewiſe empowered to examine every candidate appointed to ſerve as a ſurgeon or ſurgeon's mate, either in the army or navy. The firſt maſter, wardens, examiners, and thirteen of the court of aſſiſtants were named in the act; and as this reformation, which conſtitutes ſo intereſting an epocha in the chirurgical hiſtory of this kingdom, was in a great meaſure due to

* An engraving from this picture was publiſhed in 1736, at the expence of the company. The names of the perſons whoſe portraits are introduced in the picture are given at the bottom of the print, with references to each. They are as follows, J. Alſop, W. Butts, J. Chambers, T. Vycary, J. Aylef, N. Symſon, E. Harman, J. Monforde, J. Pen, N. Alcoke, R. Fereis, W. Tylly, X. Samon.

the zeal and activity of thoſe gentlemen, the reader will perhaps not be diſpleaſed to ſee their names inſerted here.

John Ranby, Eſq. Serjeant-ſurgeon, Maſter.

Joſeph Sandford,
William Cheſelden, Eſq. } Wardens.

Examiners.

Ambroſe Dickins, Eſq. Serjeant-ſurgeon.
William Petty, Eſq.
John Shipton, Eſq.
John Freke,
William Pyle,
Legard Sparham,
James Hickes,
Peter Sainthill.

Court of Aſſiſtants.

All the above named perſons, together with

Noah Roul,
John Weſtbrook,
William Singleton,
James Phillips.

Soon after this the company erected a hall in the Old Bailey, which is an elegant, though not expenſive building. There is a meeting of the Court of Examiners on the firſt Thurſday of every month at five o'clock, for the purpoſe of admitting members; or for examining Surgeons for the army and navy. To be admitted of the company there is required only a ſingle examination in Engliſh, and perſons who mean to practiſe in the country pay only about half the fees of admiſſion, giving a promiſſory note to the clerk to pay the remainder whenever they may think proper to come and reſide in town.

A LIST

OF THE

MASTER, WARDENS, COURT of ASSISTANTS, and other MEMBERS of the CORPORATION *.

Maſter, Wardens, and Court of Aſſiſtants.

† Pennell Hawkins, Eſq. Serjeant Surgeon to his Majeſty, and Surgeon to the Queen. St. James's-palace. Maſter.

† Richard Grindall, F. R. S. Surgeon to the London Hoſpital. Auſtin-friars. Warden.

"A remarkable Caſe of the Efficacy of the Bark in a Mortification." Phil. Tranſ. vol. L. for 1757.

† Fleming Pinkſton. St. Alban's-ſtreet. Warden.

† John Belchier, F. R. S. Threadneedle-ſtreet.

"An Account of an uncommon Caſe of a Woman who died at the Age of 33 Years of a Dropſy of the Ovary, after having been tapped 57 Times." Phil. Tranſ. for 1732, N° 423.

"An Account of the Bones of Animals died red by Aliment alone." Phil. Tranſ. 1736, N° 442.

"A ſecond Paper on the ſame Subject ‡," ibid. 443.

"An Account of a Man who had his Arm and Shoulder torn off by a Wind-Mill," ibid. 1738, N° 449.

† Robert Young, Surgeon to St. Bartholomew's Hoſpital. Great Ruſſel-ſtr.

† Percival Pott, F. R. S. Surgeon to St. Bartholomew's Hoſpital. Hanover-ſquare.

"An Account of Tumours which ſoften the Bones." Phil. Tranſ. 1741. N° 459.

"A Treatiſe on Ruptures." 8vo. London, 1756.

"An Account of a particular Kind of Rupture." 8vo. ibid. 1757.

"A Treatiſe on the Hydrocele." 8vo. ibid 1762.

"——— Fiſtula lachrymalis." 8vo. ibid. 1763.

"An Account of an Hernia of the Urinary Bladder, including a Stone." Phil. Tranſ. vol. LIV. for 1764.

"Remarks on the Fiſtula in Ano." 8vo. ibid. 1767.

"Some few general Remarks on Fractures and Diſlocations. 8vo. ibid. 1768.

"Obſervations on the Nature and Conſequences of thoſe Injuries to which the Head is liable from external Violence." 8vo. ibid. 1768.

"Obſervations on Wounds of the Head." 8vo. ibid. 1760, and 1771.

"An Account of the Method of obtaining a perfect or radical Cure

* In this liſt the examining ſurgeons are diſtinguiſhed by this mark †. Our guide has been the liſt printed by the company in July, 1778, in which the names are placed, as is the caſe here, in alphabetical order. In ſo numerous a liſt it is hardly poſſible to avoid error; we have been enabled however to correct ſome few miſtakes in the company's liſt.

‡ Mr. Belchier received the Royal Society's prize Medal in 1737 for his experiments on the bones contained in the above two papers.

of the Hydrocele, or watery Rupture by Means of a Seton." 8vo. ibid. 1771.

" Chirurgical Obſervations relative to the Cataract, the Polypus of the Noſe, the Cancer of the Scrotum, the different Kinds of Ruptures, and the Mortifications of the Toes and Feet*." 8vo. London, 1775.

† Stafford Crane, Surgeon to St. Bartholomew's Hoſpital. Red-lion-ſquare.

† William Bromfeild, Eſq. Surgeon to the Queen's Houſhold, and to St. George's and the Lock Hoſpitals. Conduit-ſtreet.

" An Account of a Fœtus which remained nine Years in its mother's Belly." Phil. Tranſ. N° 460.

" Some Thoughts on Dr. Hales new Method of Diſtillation by the united Force of Air and Fire," ibid. vol. XLIX.

" Thoughts nn Inoculation." 8vo. London, 1757.

" An Account of the Engliſh Night-ſhades and their Effects. Alſo practical Obſervations on corroſive Sublimate, Sarſaparilla, and the Effects of Mercury, crude and prepared." 8vo. ibid. 1757.

" A Narrative of certain Facts relative to Mr. Aylett, Surgeon and Apothecary at Windſor." 8vo. 1759.

" Chirurgical Caſes and Obſervations." 8vo. ibid. 1778. two vols.

† John Pyle, Surgeon to the Weſtminſter Infirmary. Cecil-ſtreet.

† Joſeph Warner, F. R. S. Surgeon to Guy's Hoſpital. Hatton-ſtreet.

" An Account of the Operation of the Empyema ſucceſsfully performed." Phil. Tranſ. 1751, N° 66.

" Two ſingular Caſes of diſeaſed Knee-joints ſucceſsfully treated." Phil. Tranſ. 1756.

" Caſes in Surgery, with Remarks." 8vo. London, 1754, ibid. ſecond Edition, 1760.

" Experiments concerning the Uſe of Agaric in ſtopping Hæmorhages." Phil. Tranſ. vol. XLVIII.

" A remarkable Caſe of an Aneuryſm in the principal Artery of the Thigh," ibid. vol. L. part I.

" An Account of the Teſticles, their common Covering and Coats." 8vo. London, 1774. 2s.

" A Deſcription of the human Eye, and its adjacent Parts, together with their principal Diſeaſes, and the Methods of relieving them." 8vo. ibid. 1774. 2s.

† Matthew Spray. Warwick-court, Warwick-lane.

Robert Adair, Eſq. Surgeon to Chelſea Hoſpital. Argyle-ſtreet.

Peter Triquet. Craven-ſtreet.

" The Caſe of a Phagædenic Ulcer cured by the Sublimate and Sarſaparilla." Med. Obſ. and Inq. vol. II.

Henry Watſon, F. R. S. Surgeon to the Weſtminſter Infirmary. Rathbone-place.

" An Account of the Stomach of the Gillaroo Trout," Phil. Tranſ. vol. LXI. Part I.

" A ſhort Account of Dr. Maty's Illneſs, &c." ibid. vol. LXVII.

Thomas Smith, Surgeon to St. Thomas's Hoſpital. Suffolk-lane.

Archdall Harris. New Palace-yard.

* All theſe different works have been collected and publiſhed in one volume 8vo.

William

William Sharp, F. R. S. Old Jewry.
" An Account of a new invented Inſtrument for broken Legs." Phil. Tranſ. vol. LVII. part I.
Iſaac Minors, Surgeon to the Middleſex Hoſpital. Chancery-lane.
Joſeph Elſe, F. R. S. Surgeon to St. Thomas's Hoſpital, and Member of the Royal Academy of Surgery at Paris. Throgmorton-ſtreet.
" An Account of Tumours formed by ruptured Veins, ſometimes miſtaken for Aneuryſms." Med. Obſ. and Inq. vol. III.
" An Account of a ſucceſsful Method of treating ſore Legs," ibid. vol. IV.

The

The SOCIETY of APOTHECARIES.

THE Apothecaries were incorporated in 1617, at which time there were only an hundred and four Apothecaries' ſhops within the city and ſuburbs. This Company is governed by a Maſter, Wardens, and Court of Aſſiſtants, to whom belong a Livery of an hundred and forty-four Members, and an unlimited Yeomanry, the Members of which become Liverymen when vacancies happen, according to ſeniority, on paying the uſual fees. Their hall is in Blackfriars. In the great room is a portrait of king James I. and a buſt of Dr. Gideon Delaun, who was that king's Apothecary, and a conſiderable benefactor to the company. There are two ſpacious laboratories, one for chemical, and the other for Galenical preparations.

The Surgeons of the Navy are ſupplied with all their medicines from hence, and perſons may be ſure of meeting here with the beſt drugs and chemical preparations.

The Company have a botanical garden at Chelſea, which is, perhaps, excelled by no botanical garden in Europe, for the good order in which it is kept, and the number of exotics that are cultivated in it.

This ſpacious garden, which contains nearly four acres, was given to the Company by Sir Hans Sloane, Bart. on condition of their delivering annually to the Royal Society fifty ſpecimens of plants, the growth of this garden, until the number ſhould amount to two thouſand. A Botanical Lecture is occaſionally given here during the ſummer by the Company's Botaniſt. Mr. Hudſon, the ingenious author of the Flora Anglica, was for many years in this office. It is now filled by Mr. Curtis, who is well known by his Flora Londinenſis.

Mr. Rand, in 1739, publiſhed a compendious Catalogue * of the plants cultivated in the garden, and a ſmaller Catalogue ‡ of the officinal plants; but ſince that time ſo many improvements have been made in Botany, that a new and accurate Catalogue would certainly be an acceptable work to the public.

* "Horti Chelſeyani Index compendarius." 8vo. London, 1739.

‡ "Index Plantarum officinalium, quæ ad Materiæ Medicæ Scientiam promovendam in Chelſeyano Horto ali et demonſtrari curavit Societas Pharmac. Londini." 8vo. ibid. 1730.

A LIST

OF THE

HOSPITALS and other MEDICAL CHARITIES in London.

St. BARTHOLOMEW's HOSPITAL.

This Hoſpital, which formerly belonged to the Priory of St. Bartholomew, was, at the diſſolution of the monaſteries by Henry VIII. founded anew, and endowed by that monarch with the annual revenue of 500 marks, on condition that the city ſhould pay the ſame ſum. This propoſal was readily embraced, and the managers of this foundation were incorporated by the name of the *Hoſpital of the Mayor, Commonalty, and Citizens of London, Governors for the Poor called Little St. Bartholomew's, near Weſt Smithfield.* Since that time great benefactions have been received from private perſons; and in 1719, the Hoſpital being ruinous, it was begun to be rebuilt by ſubſcription, ſo as now to form a handſome ſquare, containing ſpacious apartments for the Treaſurer, Steward, Apothecary, and ſome of the other officers of the Hoſpital, and roomy airy wards for the reception of more than four hundred patients.

Phyſicians, William Pitcairn, M. D. Preſident of the Royal College of Phyſicians, F. R. S. and Muſ. Brit. Cur.
Richard Tyſon, M. D.
John Lewis Petit, M. D. F. R. S.

Surgeons,

Surgeons, Mr. Percival Pott, F. R. S.
Mr. Stafford Crane.
Mr. Robert Young.
Aſſiſtant Surgeons, Mr. Edmund Pitts, Mr. John Earle, Mr. C. Blicke.
Apothecary, Mr. William Robinſon.

St. THOMAS's HOSPITAL.

This Hoſpital, which is ſituated in Southwark, was founded by Edward VI. in 1553. The building at preſent conſiſts of three ſquare courts, in which are nineteen ſpacious apartments or wards, capable of containing in the whole upwards of four hundred and fifty patients. Theſe wards are well ventilated, and furniſhed with iron bedſteads. There is a light and roomy theatre for operations, and the anatomical theatre has been lately rebuilt in a very neat and commodious ſtyle.

Phyſicians, George Fordyce, M. D. F. R. S.
John Rawlinſon, M. D.
Henry Revel Reynolds, M. D.
Surgeons, Mr. Thomas Smith.
Mr. Joſeph Elſe, F. R. S.
Mr. George Martin.
Apothecary, Mr. George Whitfield.

BETHLEM HOSPITAL.

This Hoſpital, which was originally a Priory, was at the Reformation converted into an Hoſpital for Lunatics. The preſent building was begun in 1675, and finiſhed the following year. Two wings have ſince been added for the reception of Incurables. There are generally above two hundred lunatics maintained in this hoſpital. Patients are received from any part of the kingdom, but are diſcharged at the expiration of a year if not relieved before that time.

Phyſician, John Monro, M. D.
Surgeon, Richard Crowther.
Apothecary, John Gozna.

The HOSPITAL for FRENCH PROTESTANTS and their DESCENDANTS.

Was incorporated in 1718, and contains two hundred beds, beſides forty-two for lunatics in an adjoining houſe.

Phyſician, James Dargent, M. D. F. R. S.
Surgeon and Apothecary, Mr. Peter Girod.

GUY's HOSPITAL

Situated in the Borough of Southwark, was founded in 1721, by Mr. Thomas Guy, a bookfeller of London. Mr. Guy was feventy-fix years of age when he began this building, but before his death, which happened in December 1724, the whole of it was roofed in. The expence of erecting and furnifhing this hofpital, together with the fum Mr. Guy left for its endowment amounted in the whole to upwards of 240,000 l. It contains about four hundred and thirty beds, befides a ward for the reception of lunatics.

Phyficians, Henry Hinckley, M. D.
Robert Thomlinfon, M. D.
William Saunders, M. D.
Surgeons, Mr. Joſeph Warner, F. R. S.
Mr. James Frank.
Mr. William Lucas.
Apothecary, Mr. Benjamin Stead.
Aſſiſtant Apothecary, Mr. John Grant.

The WESTMINSTER INFIRMARY.

Situate in Petty France, Weſtminſter, was ſet on foot in 1719, and is ſupported by voluntary ſubſcription.

Phyſicians, Michael Morris, M. D. F. R. S.
James Dargent, M. D. F. R. S.
George Hicks, M. D.
Surgeons, Mr. John Pyle.
Mr. Henry Watſon, F. R. S.
Mr. John Obadiah Juſtamond, F. R. S.
Apothecary, Mr. Jabez Ward.

ST. GEORGE's HOSPITAL.

Which is in an airy ſituation near Hyde-Park Corner, was firſt opened for the reception of patients in 1734, and is ſupported by voluntary ſubſcriptions. This hoſpital is capable of accommodating upwards of two hundred and ſeventy patients. The Apothecaries, who are Governors, are appointed to attend as viſitors to ſee that the Houſe Apothecary takes due care of the medicines and patients.

Phyſicians, Thomas Giſborne, M. D. F. R. S.
Donald Monro, M. D. F. R. S.
Richard Wright, M. D. F. R. S.
John Burges, M. D.
Surgeons, William Bromfeild,
John Gunning.
John Hunter, F. R. S.
Charles Hawkins, Eſqrs.

Aſſiſtant

Assistant Surgeon, Mr. David Bayford, F. R. S.
House Apothecary, Mr. William Dampier.
Visiting Apothecaries, Mr. J. Truesdale, Mr. Matthew Yatman, Mr. Joseph Partridge, Mr. R. Halifax, Mr. G. Hailes, Mr. J. Devaynes.

The LONDON HOSPITAL

Was instituted by subscriptions in 1740, and incorporated in 1758. A house in Prescot-street, Goodman's-fields was made use of as a temporary hospital till the present building was erected in Whitechapel-road. The wards are large and airy, and contain in the whole about an hundred and sixty beds. All the Governors who practise physic, surgery, or pharmacy, form a physical committee, which is summoned every first Thursday in the month, to inspect the drugs and medicines used in the hospital.

Physicians, Thomas Dickson, M. D. F. R. S.
Thomas Healde, M. D. F. R. S.
James Maddocks, M. D.
Surgeons, Mr. Richard Grindall, F. R. S.
Mr. Henry Thomson.
Mr. George Neale.
Apothecary, Mr. Daniel Eldridge.

The MIDDLESEX HOSPITAL

Was erected in 1755, but the charity is of an older date, having been instituted in 1745. It is supported by voluntary subscription, and contains about one hundred and fifty beds for the reception of sick and lame patients, and lying-in women.

Physicians, Hugh Alexander Kennedy, M. D.
Robert Knox, M. D.
J. Carmichael Smyth, M. D.
Francis Milman, M. D. F. R. S.
Men Midwives, Henry Krohn, M. D.
Thomas Denman, M. D.
"Essays on the Puerperal Fever and Convulsions." 8vo. London, 1768.
Surgeons, Mr. Isaac Minors.
Mr. Samuel Howard, F. R. S.
Mr. James Chasy.
Mr. John Wyatt.
House Surgeon, Mr. Samuel Kelson.
Apothecary, Mr. Joseph Roper.

The LOCK HOSPITAL, near Hyde-park Corner,

For the cure of the venereal diſeaſe, began to receive patients in 1747, and contains about forty beds.

Phyſician, Sir Noah Thomas, Knt. M. D. F. R. S.
Surgeons, Mr. Thomas Williams.
William Bromfeild, Eſq.
Houſe Surgeon, Mr. R. Still.

The BRITISH LYING-IN HOSPITAL,

For married women, in Brownlow-ſtreet, Long Acre, inſtituted in 1749.

Phyſicians, Robert Bromfeild, M. D.
Maxwell Garthſhore, M. D. F. R. S.
Conſulting Phyſicians, William Hunter, M. D. F. R. S.
Chriſtopher Kelly, M. D.
Surgeons, Mr. William Graves.
Mr. Michael Underwood.
Apothecary, Mr. M. P. Julliott.

The CITY of LONDON LYING-IN HOSPITAL

Was inſtituted in 1750. The governors at firſt made uſe of Shafteſbury-houſe, in Alderſgate-ſtreet, but have lately erected a plain and convenient Hoſpital on the City Road. This charity, which is ſupported by voluntary ſubſcriptions, admits four or five hundred patients every year.

Phyſician in Ordinary, Nathaniel Hulme, M. D.
Man Midwife in Ordinary, Robert MacLaurin, M. D.
Man Midwife Extraordinary, David Orme, M. D.
Surgeon in Ordinary, Mr. William Lucas.
Surgeon Extraordinary, Mr. Richard Ball.
Apothecary, Mr. William Ball.

St LUKE's HOSPITAL, for the Reception of LUNATICS,

Is a very neat and plain ſtructure at the north end of Moorfields, built and ſupported by private ſubſcriptions. This charity has one great advantage over Bethlem Hoſpital, by admitting patients without any expence, and according to the order of time in which the petitions of their friends have been delivered to the ſecretary, without favour or partiality. The Governors, as is the caſe now at Bethlem Hoſpital, have very humanely ordered that no patient ſhall be expoſed to public view.

Phyſician, Thomas Brooke, M. D.

Surgeon,

Surgeon, Mr. John Waring.
House Apothecary, Mr. J. Meadows.

WESTMINSTER NEW LYING-IN HOSPITAL,

Situated near Weſtminſter-Bridge, on the Surry ſide, inſtituted in 1765, and ſupported by ſubſcriptions.

Phyſician and Man Midwife, John Leake, M. D.
——————————— *Extra*, James Ford, M. D.
Conſulting Phyſician, Richard Saunders, M. D.
Surgeon, Mr. Lewis Poignand.

The SMALL-POX HOSPITAL,

Inſtituted in 1746, is intended not only for the reception of patients labouring under the ſmall-pox, but for extending the benefits of inoculation. It conſiſts of two houſes at ſome diſtance from each other; one of theſe for preparing the patients for inoculation is ſituated at Pancras, and the other for receiving them when the diſeaſe appears, and for the reception of patients in the natural way is in Cold Bath Fields.

Phyſician, Edward Archer, M. D.
Apothecary in Cold Bath-fields, Mr. Richard Squirrel.
Apothecary at Pancras, Mr. Matthew Endenup.

DISPENSARY for the INFANT POOR,

Inſtituted in 1769, in Soho-ſquare. The deſign of this charity is to adminiſter remedies gratis to the children of the induſtrious poor, from the birth till the age of ten or twelve years. In the courſe of the laſt year upwards of four thouſand patients were admitted.

Phyſician, George Armſtrong, M. D.
" An Eſſay on the Diſeaſes of Children." 8vo. London, 1767; republiſhed in 1777, with Additions under the Title of " An Account of the Diſeaſes moſt incident to Children."

The GENERAL DISPENSARY,

In Alderſgate-ſtreet, was inſtituted in 1770, for the humane purpoſe of adminiſtring advice and medicines gratis, to the ſick poor, and of attending them at their own habitations. The Diſpenſary's fund for the firſt year did not exceed an hundred and fifty-eight pounds, but at preſent there are at leaſt fourteen hundred Governors, who, beſides having a conſiderable capital in the public funds, have been

been enabled lately to erect a convenient building for the use of the charity. The number of patients admitted from March 1777 to March 1778 amounted to five thousand eight hundred and twenty. The Physicians and Surgeon have each an annual salary of an hundred pounds.

Physicians, Nathaniel Hulme, M. D.
John Coakley Lettsom, M. D. F. R. S.
James Sims, M. D.
Surgeon, Mr. George Vaux.
Apothecary, Mr. William Slater.

The WESTMINSTER GENERAL DISPENSARY

Was established in 1774, in Gerrard-street, Soho, and has at present about seven hundred Governors. It extends its views not only to medical cases, but to those of surgery and midwifery. The Physicians, Surgeons, and Men-midwives attend gratis.

Physicians, Michael Teighe, M. D. F. R. S.
Charles E. Bagge, M. D. (Cambridge, 1778).
John Hunter, M. D.
Consulting Physician and Man Midwife, James Ford, M. D.
Man Midwife, Mr. Robert Bland.
Surgeon, Mr. Edward Ford.
Apothecary, Mr. John Marshall.

The GENERAL MEDICAL ASYLUM

Was instituted in Welbeck-street, Cavendish-square, in 1776, on a similar plan as that of the Westminster Dispensary. The number of Governors amounts to about three hundred.

Physicians, Andrew Wilson, M. D. Fellow of the Royal College of Physicians, Edinburgh.
G. Levison, M. D.
"An Essay on the Blood." 8vo. London, 1776. 1s.
"An Account of the Epidemical Sore Throat." 8vo. ibid. 1778.
Physician Man Midwife, William Lowder, M. D.
Surgeons, Mr. John Sheldon.
Mr. William Smart.
Apothecary, Mr. John Young.

The MISERICORDIA,

Or Hospital for the cure of indigent persons afflicted with the venereal disease, in Great Ayliffe-street, Goodmans-fields, was instituted in 1774.

Physician, William Grant, M. D.
Surgeons, Mr. William Blizard.
Mr. Alexander Maxwell.

The

The LONDON DISPENSARY,

Inſtituted in 1778, in Norton Falgate.

Phyſician, Dr. Kooſtray.
Surgeon and Accoucheur, Mr. White.

The SURRY DISPENSARY,

Inſtituted in the Borough of Southwark in 1778.

Phyſicians, Loftus Wood, M. D.
" Caſes Medical, Chirurgical, and Anatomical, ſelected and tranſlated from the Memoirs of the Academy of Sciences at Paris." 8vo. London, 1776.
John Sims, M. D. (Edinburgh).
" Diſſ. Inaug. de Uſu Aquæ frigidæ interno." 8vo. Edin. 1774.
Conſulting Phyſician, James Sims, M. D.
Surgeon and Accoucheur, Mr. Fearman.

The MIDDLESEX DISPENSARY,

Inſtituted in 1778, in Hounſditch.

Phyſician, John Watkinſon, M. D.
Conſulting Phyſician, James Sims, M. D.
Surgeon, Mr. Ogle.

The DISPENSARY for GENERAL INOCULATION.

Inſtituted in 1777.

Phyſician, John Watkinſon, M. D.
" An Examination of a Charge brought againſt Inoculation by De Haen, Raſte, Dimſdale, and other Writers." 8vo. London, 1777. 1s.
Conſulting Phyſicians, James Sims, M. D.
John Coakley Lettſom, M. D.
Surgeons, Mr. J. Crawford, Mr. T. Ogle.
Apothecary, Mr. H. French.

The CHARITY for Delivering Poor Married Women at their own Houſes. Inſtituted in 1760.

Phyſicians, John Ford, M. D.
Thomas Cogan, M. D. (Leyden).
William Cooper, M. D.
Treaſurer and Diſpenſer, Mr. Peter Sharp, Biſhopſgate-ſtreet, Without.

The

The HUMANE SOCIETY.

The recovery of perſons apparently dead, is perhaps one of the moſt ſtriking proofs of the ſuperiority of modern phyſic over that of the ancients. In the laſt century ſuch a recovery would have been conſidered as miraculous; in the preſent we are able to explain it on phyſiological principles. It is now well known that in man and other animals, life does not entirely ceaſe on the ceſſation of the action of the heart and lungs; and that although the circulation be neceſſary for the ſupport of life, yet that the living ſtate more eſpecially depends upon a certain condition of the nerves and muſcular fibres, by which they are ſenſible and irritable, and upon which the action of the heart itſelf depends. This may be called the vital principle in animals, and as long as it ſubſiſts to ſuch a degree that it may be again reſtored to its activity and vigour, the action of the heart and lungs, and all the other functions of life, although they have long ceaſed, may be again perfectly reſtored. We are not as yet able to determine how long the vital principle may ſubſiſt in the human ſyſtem after its ſeeming extinction, but from the analogy of other animals, and from many well atteſted facts it is certain that it may ſubſiſt very long. We ſhould therefore not be too raſh in ſetting bounds to the poſſibility of the recovery of drowned perſons. The ſame principles are equally applicable to perſons ſtrangled, frozen, or ſuffocated by noxious vapours.

The firſt eſtabliſhment for the recovery of drowned perſons was ſet on foot at Amſterdam in 1767. The views adopted by this benevolent ſociety were to inform the common people of the meaſures which may be moſt effectually employed in theſe caſes; to caution them againſt practices which have hitherto been frequently employed, but which experience has now ſhewn to be pernicious; to inſtigate them, by proper rewards, to the exertion of every endeavour for the recovery of life apparently loſt; and to defray any expences that might be incurred in ſuch humane attempts. This plan of the Dutch ſociety was firſt made known in this country by Dr. Alexander Johnſon * in 1773. And the year following the Humane Society was inſtituted in London, chiefly through the zeal and activity of Mr. William Hawes, Apothecary in the Strand. A ſimilar inſtitution at Paris was due to the benevolent exertions of Mr. Pia, who is likewiſe an Apothecary. Other Societies on the ſame plan have been formed at Vienna, Venice, Genoa, Lyons, Milan, Padua, Hamburgh, Edinburgh, and ſome other great cities. So great has been the encouragement of the inſtitution in England, that ſubſcriptions have been raiſed at Liverpool, Cheſter, Colcheſter, and other places, for co-operating with the London Society.

* In a work entitled "A ſhort Account of a Society inſtituted at Amſterdam "for the Recovery of Drowned Perſons; with Obſervations ſhewing the Utility "and Advantage which would accrue to Great Britain, from a ſimilar Inſtitu-"tion extended to Caſes of Suffocations by Damps in Mines, Choaking, Strang-"ling, Stifling, and other Accidents." 8vo. London, 1773.

We

We ſhall here add the plan of the Society, and the methods of treatment of drowned perſons, as given in their laſt annual reports.

The Plan.

I. The Society has undertaken to publiſh, in as extenſive a manner as poſſible, the proper methods of treating perſons in thoſe unfortunate circumſtances.

II. To diſtribute a premium of *Two Guineas* among the firſt perſons, not exceeding *four* in number, who will attempt to recover man, woman, or child, taken out of the water for dead, within thirty miles of the cities of London and Weſtminſter; provided they had not been longer than *two hours* under the water; and provided the aſſiſtants perſevere in the uſe of the means recommended, and no others, unleſs under the direction of a regular practitioner, for the ſpace of *two hours*. This reward to be given, though they may *not* prove ſucceſsful.

III. To diſtribute in like manner *Four Guineas* wherever the patient has been reſtored to life.

IV. To give to any publican, or other, who ſhall admit the body into his houſe without delay, and furniſh the neceſſary accommodations, the ſum of *One Guinea*; and alſo to ſecure them from the charge of burial, in unſucceſsful caſes.

V. A certain number of Medical gentlemen, ſtationed near to the places where diſaſters by water are moſt frequent, have engaged to give their aſſiſtance *gratis:* theſe gentlemen are to have a fumigator, and other neceſſaries, always in readineſs.

Methods of Treatment.

I. In removing the body to a convenient place, great care ſhould be taken that it be not bruiſed, nor ſhaken violently, nor roughly handled, nor carried over any one's ſhoulders, with the head hanging downwards, nor rolled upon the ground, or over a barrel, nor lifted up by the heels: for experience proves, that all theſe methods are injurious, and often deſtroy the ſmall remains of life. The unfortunate object ſhould be cautiouſly conveyed in the arms of two or more perſons, or in a carriage upon ſtraw, lying, as on a bed, with the head a little raiſed, and kept in as natural and eaſy a poſition as poſſible.

II. The body being well dried with a cloth, ſhould be placed in a bed or blanket properly warmed; but not too near a large fire. Bottles of hot water ſhould be laid to the bottoms of the feet, in the joints of the knees, and under the arm-pits; and a warming-pan, moderately heated, or hot bricks wrapped in cloths, ſhould be rubbed over the body, and particularly along the back. The natural and kindly warm of a healthy perſon lying by the ſide of the body, particularly by that of a child, has been found in many caſes very efficacious. The windows or door of the room ſhould be left open, and no more perſons be admitted into it than thoſe who are abſolutely neceſſary,

as

as the life of the patient greatly depends upon his having the benefit of a pure air. The ſhirt or cloaths of an attendant, or the ſkin of a ſheep freſh killed, may alſo be uſed with advantage. Should theſe accidents happen in the neighbourhood of a warm bath, brew-houſe, bake-houſe, glaſs-houſe, ſaltern, ſoap manufactory, or any fabrick where warm lees, aſhes, embers, grains, ſand, water, &c. can be eaſily procured, it would be very proper to place the body in any of theſe, moderated to a degree of heat, but very little exceeding that of a healthy perſon.

III. The body being placed in one or other of theſe advantageous circumſtances as ſpeedily as poſſible, various ſtimulating means ſhould next be employed. The moſt efficacious are:—Blowing with force into the lungs, by applying the mouth to that of the patient, cloſing at the ſame time his noſtrils with one hand, and gently expelling the air again by preſſing the cheſt with the other, imitating the ſtrong breathing of a healthy perſon; the medium of a handkerchief or cloth may be uſed to render the operation leſs indelicate:—Throwing the ſmoke of tobacco up the fundament into the bowels, by means of a pipe or fumigator, ſuch as are uſed in adminiſtering clyſters; a pair of bellows may be employed until the others can be procured:—Rubbing the belly, cheſt, back, and arms, with a coarſe cloth, or dry ſalt, ſo as not to rub off the ſkin; or with a flannel dipped in brandy, rum, or gin:—Applying ſpirits of hartſhorn, volatile ſalts, or any other ſtimulating ſubſtance, to the noſtrils, and rubbing them upon the temples very frequently: tickling of the throat with a feather, ſo as to excite a propenſity to vomit; and the noſtrils alſo with a feather, ſnuff, or any other ſtimulant, ſo as to provoke ſneezing. The body ſhould at intervals be ſhaken alſo, and varied in its poſition.

IV. If there be any ſigns of returning life, ſuch as ſighing, gaſping, twitchings, or any other convulſive motions, beating of the heart, the return of the natural colour and warmth, a ſpoonful of warm water may be adminiſtered, in order to learn whether the power of ſwallowing be returned; if it be, a ſpoonful or two of warm wine, or brandy and water, may be given with advantage; but not before, as the liquor might otherwiſe get into the lungs. One or other of the above methods ſhould be perſevered in, until the patient be reſtored.

We have been as circumſtantial as poſſible in the above directions, that if one conveniency ſhould be wanting, the attendants may not be at a loſs for others. Where the patient has lain but a ſhort time ſenſeleſs, blowing into the lungs or bowels has been, in ſome caſes, found ſufficient: yet a *ſpeedy* recovery is not to be expected in general. The above methods are therefore to be continued with ſpirit for *two hours, or upwards*, although there be not the leaſt ſymptoms of returning life. The vulgar notion, that a perſon will recover in a few minutes, or not at all, and the ignorant fooliſh ridiculing of thoſe who are willing to perſevere, as if they were attempting impoſſibilities, have

have moſt certainly cauſed the death of many who might otherwiſe have been ſaved.

Moſt of the above means are happily of ſuch a nature that they may be begun *immediately*, and that by perſons who are not acquainted with the medical art; yet it is always adviſeable to ſeek the aſſiſtance of ſome regular practitioner as ſoon as poſſible, as it is to be preſumed that ſuch a one will be more ſkilful and expert, and better able to vary the methods of procedure, as circumſtances may require.

☞ The Society find it neceſſary to inform practitioners in general, that ſeveral caſes have fallen under their obſervation, in which *early* bleeding has been productive of pernicious, and even fatal, effects. They are therefore of opinion, that the opening of a veſſel ſhould not be placed among the common methods of treatment, or ſuch as are *always* applicable, although it may ſometimes be ſucceſsfully employed to remove ſubſequent ſymptoms of an inflammatory nature.

*** The Society think it proper to obſerve, that moſt of the above means of reſtoration are applicable to various other caſes of apparent death; whether from hanging, apoplectic and convulſive fits, cold, ſuffocation by damps, or noxious vapours proceeding from coal-mines, the confined air of wells, ciſterns, caves, or the muſt of fermenting liquors.

Whenever any good has been produced by the means recommended, the perſon who has ſuperintended the cure is deſired to write a circumſtantial account of it to Mr. William Hawes ‡, Secretary to the Society, Palſgrave-place, Strand.

The MEDICAL SOCIETY of LONDON.

This uſeful Society was inſtituted in 1773, for the very laudable purpoſe of giving practitioners in medicine frequent opportunities of meeting together, and conferring with each other, concerning any difficult or uncommon caſes, or any new diſcoveries in medicine.

The ordinary meetings of the Society are on every alternate Tueſday, at ſeven in the evening. The general meetings are on the 18th of January, and the 4th of June. At the firſt of theſe meetings an oration is delivered by one of the members, on the beſt means of improving the ſcience of medicine. Some of theſe annual diſcourſes have been publiſhed, and reflect great credit on their authors. We hope in our Regiſter for next year to be enabled to give a liſt of the members of the Society. The preſent Secretaries are John Kooſtray, M. D. Mr. Edward Ford, and Mr. John Pearce.

‡ Author of "An Examination of Mr. Weſley's Primitive Phyſic." 8vo. London, 1776.

The BRITISH MUSEUM.

For this Inſtitution, which is ſo honourable to the Britiſh nation, we are in a great meaſure indebted to the late Sir Hans Sloane, Bart. He bequeathed his immenſe library of books and MSS. and his collection of natural hiſtory and other curioſities, to the public, on condition that the Parliament ſhould pay 20,000 l. to his executors; a ſum far ſhort of their real value. The Parliament agreed to the propoſal, and an act was paſſed for the raiſing 100,000 l by lottery. Of this ſum 20,000 l. was paid to the executors, 10,000 l. for the purchaſe of the Harleian library, and 10,000 l. for the purchaſe of Montagu-houſe, a large and magnificent building in Great Ruſſel-ſtreet, Bloomſbury, which now ſerves as a repoſitory for the collection. Other ſums were expended in the purchaſe of the Cottonian and other libraries. The Britiſh Muſeum contains likewiſe the Royal Libraries of Books and MSS. collected by the ſeveral Kings of England. The common mode of admiſſion to ſee the Muſeum by tickets, is calculated rather to gratify curioſity than to afford information. But perſons of reputation, who are engaged in any work of learning, may, by a proper application to the Truſtees, procure leave to read and take extracts from books in the Muſeum, during certain hours for the ſpace of ſix months.

Principal Librarian,	Charles Morton, M. D. F. R. S.
Under Librarians,	Joſeph Planta, Eſq. S. R. S. has the Care of the MSS. and Medals.
	Andrew Gifford, D. D. F. S. A. his Aſſiſtant.
	Daniel Charles Solander, M. D. F. R. S. has the Care of Natural Hiſtory.
	Edward Gray, M. D. his Aſſiſtant.
	Rev. S. Harper, F. R. S. has the Care of the Printed Books.
	Rev. P. H. Maty, F. R. S. his Aſſiſtant.
Keeper of the Reading Room,	Rev. Richard Penneck, B. D. F. R. S.

The

The ROYAL SOCIETY.

This Society, which took its rise about the year 1650, from the private meetings of a few learned and ingenious men, was founded for the improvement of natural knowlege. The Hon. Mr. Boyle, Sir William Petty, Dr. Seth Ward, Dr. Wallis, Dr. Goddard, Dr. Willis, Dr. Bathurst, and some others, frequently met together in the apartments of Dr. Wilkins, at Oxford, to discourse on philosophical subjects. The meetings of these literati continued at Oxford until 1658, when the members dispersing, and the greater number of them coming to London, their meetings were renewed at Gresham College, where they were met twice a week by persons of the greatest learning and distinction. During the state of anarchy which succeeded the death of Cromwell the meetings were discontinued, but took place again soon after the Restoration, when each member entered into an obligation to pay one shilling a week towards the defraying occasional expences.

From these small beginnings this Society soon arose to be one of the most celebrated in Europe; for their design being favoured by some ingenious men who followed the king in his exile, his Majesty granted them a charter, dated the 15th of July, 1662, whereby they were denominated the ROYAL SOCIETY, and made a corporation, to consist of a President, Council, and Fellows, for promoting natural knowlege, and useful arts and experiments. In this charter his Majesty declared himself their patron, and empowered them to make by-laws, to purchase lands, and to have a common seal. In 1666, the Hon. Henry Howard, afterwards duke of Norfolk, made the Society a present of a very valuable library, which had been purchased by the earl of Arundel at Nuremberg, on his return from Vienna. This collection, which was formerly a part of the royal library belonging to the kings of Hungary, consists of three thousand two hundred and eighty-seven printed books, chiefly of the first editions soon after the origin of printing, and about five hundred and fifty-four MSS. in Hebrew, Greek, Latin, and Turkish; many of them very scarce and valuable. The Society's museum was founded in 1677, by Daniel Colwall, Esq. and a catalogue of it published in 1681, by the celebrated Dr. Nehemiah Grew. But this was a small collection when compared with the present, considerable additions having been made every year, both to the library and museum, not only by members of the Society, but by others. An annual account of the donations is published at the end of every volume of the Philosophical Transactions. The Society is governed by a President, and Council, consisting of twenty-one Fellows. The meetings of the Society are at their house in Crane-court, on Thursdays at five o'clock in the afternoon, and the annual meeting is on the feast of St. Andrew, for the election of officers, and the disposal of the *Copleian* medal, this laudable incitement to philosophical pursuits being due to Sir *Godfrey Copley*, Bart. who bequeathed a sum of money to

the Society, the intereſt of which he appointed annually to be diſpoſed of by truſtees by him named, and after their deceaſe by the Preſident and Council of the *Royal Society* for the time being, to any perſon that ſhould make any new diſcovery in art or nature, or perform any other work that ſhould be thought worthy of ſuch diſtinction. But the Society, ſince the year 1737, have judged it more eligible and honourable to give this annual donation in the form of a medal. The learned Sir John Pringle added greatly to the importance of this annual prize while he officiated as Preſident, by the ſeveral ingenious diſcourſes he delivered on the occaſion. He himſelf received it in 1752, for his Experiments and Obſervations on Septic and Antiſeptic Subſtances, which are annexed to his Obſervations on the Diſeaſes of the Army.

The *Philoſophical Tranſactions*, of which ſixty-ſeven volumes have appeared, were for many years publiſhed in numbers, and the printing of them was the act not of the Society, but of their Secretaries. But the Society being of late years greatly enlarged, and their communications more numerous, it was thought adviſeable, that a committee ſhould be appointed to reconſider the papers read before them, and ſelect out of them ſuch as they ſhould judge proper for publication; this has accordingly been done ſince the year 1752. The committee, annually choſen for this purpoſe, conſiſts of fifteen members. Since the year 1772, the *Tranſactions* have been publiſhed twice in every year: the firſt publication is directed to be of the months of November and December of the preceding year, and January and February of the current year, as ſoon as may be after February, under the name of the "Firſt Part" of the volume: and the ſecond publication to be of the remaining months unto the receſs of the Society, under the name of the "Second Part" of the volume.

The Liſt of the Royal Society.

His Sacred Majeſty King GEORGE III. *Patron.*
His Sacred Majeſty STANISLAUS AUGUSTUS, King of Poland.
His Sacred Majeſty CHRISTIAN VII. King of Denmark.
His moſt Serene Highneſs CHARLES, Margrave of Baden Dourlach.
His moſt Serene Highneſs FRANCIS, Duke of Modena.
His moſt Serene Highneſs PETER, Duke of Courland.
His moſt Serene Highneſs CHARLES WILLIAM FERDINAND, Hereditary Prince of Brunſwick.

MEDICAL EDUCATION.

There is perhaps no city in Europe where there is so great a variety of Medical Lectures as in London; but, at the same time, we cannot help observing with regret, that it is the only capital in Europe where there is no school of Physic established by the authority of government. The Professors of Physic and Chemistry usually give three courses every year; the Professors of Anatomy only two. The Courses of Midwifery, as being much shorter, are much more frequent. We shall content ourselves with enumerating the different teachers.

Theory and Practice of Physic, Chemistry, and the Materia Medica.

Dr. George Fordyce, F. R. S. at his house in Essex-street in the Strand.

Dr. William Saunders, at the Theatre of Guy's Hospital.

N. B. Dr. Saunders has lately engaged as a partner in his Chemical Lectures, Dr. William Keir, (Edinburgh).

"Diss. Inaug. de Attractione Chemica." 8vo Edin. 1778.

Dr. Keir likewise gives a separate Course of Chemistry, at his house in the Adelphi.

The Practice of Physic.

Dr. James Sims, at Messrs. Sheldon and Blackall's Theatre in Great Queen-street.

The Theory and Practice of Physic.

Dr. J. Mattocks, at his house in Throgmorton-street.

Physico-Medical Lectures.

Dr. Andrew Wilson, Physician to the Medical Asylum, at his house in the Adelphi.

Chemistry.

Dr. B. Higgins, at his house in Greek-street.

Anatomy.

Dr. William Hunter, F. R. S. and Mr. Cruikshank, at Dr. Hunter's house in Great Windmill street.

Mr. Joseph Else, F. R. S. at the Theatre of St. Thomas's Hospital.

Dr. R. Maclaurin, and Mr. Blizard, at their house in Mark-lane.

Mr. John Sheldon, and Mr. Andrew Blackall, at their house in Great Queen-street.

Midwifery.

Midwifery.

Dr. David Orme, and Dr. William Lowder, at the Theatre of Guy's Hoſpital.

Dr. John Leake, at his houſe in Craven-ſtreet.

Dr. Oſborn, and Dr. Denman, at Dr. Denman's in Queen-ſtreet, Golden-ſquare.

Surgery.

Mr. John Hunter, at his houſe in Jermyn-ſtreet.

Botany.

Mr. William Curtis, the ingenious author of the Flora Londinenſis, has lately opened by ſubſcription a Botanic Garden, which we hope will meet with all the patronage it deſerves. We have indeed often wondered that in this metropolis there ſhould be no regular Courſe of Botany. Mr. Curtis's Garden, which as yet is in its infancy, is ſituated near Blackfriars-bridge, in Higlers-lane, Lambeth-marſh. It contains ſeven hundred Engliſh plants, eighty of which are graſſes ſtrictly ſo called; an hundred officinal plants, or ſuch as are uſed in phyſic; and a conſiderable number of foreign plants, all of which we are told have in general grown and flowered as well as if they had been more remotely ſituated from London. The generic and trivial name of each plant from Linnæus, as alſo the Engliſh name, and the page in which it is to be found in Lewis's Diſpenſatory, are painted in legible characters, and affixed to each plant. That the plants may be diſtinguiſhed by their ſeveral uſes, a part of the ſtick affixed to each is painted of ſome diſtinguiſhing colour, as yellow for phyſic, blue for food, black for poiſon, red for dying, and green for agriculture, or oeconomical purpoſes. To this Garden Mr. Curtis has added a Botanic Library. The Garden and Library are to be opened for the uſe of the ſubſcribers on four days in the week, viz. Tueſdays, Wedneſdays, Thurſdays, and Fridays, from ſix in the morning till eight at night. The terms of the ſubſcription are two guineas per annum.

Wycomb. § Mr. Joſeph Bell.

CAMBRIDGESHIRE.

Cambridge. The Univerſity of Cambridge is compoſed of ſixteen Colleges.

The Academical Year is divided into three Terms, viz.

1ſt. Lent Term, which begins Jan. 13, and ends April 10.

2d. Eaſter, ——— April 29, —— July 10.

3d. Michaelmas, —— Oct. 10, —— Dec. 16.

The firſt Tueſday of July in every year is the *Dies Comitiorum*, or Commencement, when degrees are conferred in the ſeveral faculties.

There are but few Medical Lectures read at Cambridge, and the number of Medical Students is inconſiderable. The degree of M. B. may be taken here after being of ſix years ſtanding, and that of M. D. five years afterwards: whereas at Oxford the Bachelor's Degree cannot be taken till the Graduate is of ten years ſtanding, and the degree of Doctor, not till four years afterwards.

† 1741 REGIUS PROFESSOR of PHYSIC.
Ruſſel Plumptre, M. D. Fellow of the Royal College of Phyſicians, London.

1774 PROFESSOR of CHEMISTRY.
Iſaac Pennington, M. D. Fellow of the Royal College of Phyſicians, London.

† The date of election to the Profeſſorſhip.

PROFESSOR

PROFESSOR of ANATOMY.
Charles Colignon, M. D. F. R. S.
" Compendium Anatomico Medicum, eorum quæ in Scholis Cantab. Menſe Martii quotannis explicat, demonſtratque Carolus Colignon, M. D." 8vo. London, 1763.

Oglethorp Wainеman, M. D. (Edinburgh.)
" Obſervationes Miſcellaneæ de Vino præcipue." 8vo. Edin. 1772.

SURGEONS and APOTHECARIES.
Mr. Ralph Archbould, Mr. John Argles, Mr. William Skrimſhire, Mr. Thomas Cox, Mr. Robert Hardwick, Mr. John Poynton.

CHESHIRE.

Cheſter. A COUNTY INFIRMARY was founded at Cheſter ſeveral years ago, but of that and of the Practitioners at Cheſter we are able at preſent to give only a very imperfect account. We owe our liſts of practitioners in the other parts of Cheſhire to the kindneſs of communicative gentlemen in the neighbouring counties. It is with pleaſure however we are enabled to inform the public, that a Society for promoting Innoculation, and for preventing the Fatality of the Small-pox, has been lately formed in the

city of Cheſter; and we are aſſured that the regulations of this Society have prevented the diſeaſe from ſpreading in four different parts of the town. The Inſpector to the Society is authoriſed to give a reward to the perſon who firſt informs him that a freſh family is infected.

PHYSICIANS.

John Haygarth, M. D.

"Experiments on the Cerumen, or Ear-wax." Med. Obſ. vol. IV.

"Obſervations on the Bill of Mortality in Cheſter for 1772." Phil. Tranſ. vol. LXIV.

"Mineralogia Cornubienſis, a Treatiſe on Minerals, Mines and Mining." Folio, London, 1778†.

Mr. Pryce has in his poſſeſſion a curious relic of Britiſh Antiquity. It conſiſts of five Corniſh Interludes, or Plays, the ſubjects of which are the Nativity, the Paſſion, &c. written in Corniſh metre, and literally tranſlated into Engliſh. In the ſame book Mr. Pryce has a moſt copious Corniſh Vocabulary of ſeveral thouſand words fit for the preſs, collated with Lluyhd, Davis, Hals MS. Tonkin MS. Borlaſe, Scawen MS. Moyle MS. Keigwin MS. Boſon MS. and a Corniſh MS. Vocabulary in the Cotton Library, *eight hundred years old.* The Hon. Daines Barrington has ſeen the book, and given the contents of it in the laſt volume of the *Archæologia.* Although the MS. in queſtion is not on a Medical ſubject, yet as belonging to a Medical man, we have thought it right to ſpeak of it in our Regiſter, and ſhall be happy if this ſlight mention of it ſhould be the means of directing the attention of the public to ſo curious a performance. It ſeems that at preſent there is no perſon capable of converſing in the

† See our Catalogue of Books.

ancient

ancient Corniſh Britiſh Language, ſo that for want of ſuch converſible knowlege it may be entirely loſt. The price of the MS. has been fixed at two hundred guineas, but Mr. Pryce is willing to abate of that ſum.

DEVONSHIRE.

Exeter. The EXETER and DEVON HOSPITAL was opened for the reception of patients January 1, 1742-3; since that time it has been considerably enlarged, and is now capable of containing an hundred and sixty patients. It appears from the reports printed by the Hospital, that the expence of building and furnishing the house, including all the several additions to it, has amounted to the sum of 6752 l. and that the legacies and benefactions to the Hospital, exclusive of the annual subscriptions, have amounted to 12158 l. The establishment of this excellent charity was due in a great measure to the zeal and humanity of Dr. Alured Clarke, late Dean of Exeter, who before this, in 1736, had been the first and most active promoter

moter of the Wincheſter Hoſpital. The Phyſicians, by the rules of the Hoſpital, are to be four in number, but at preſent †, there is a vacancy by the reſignation of Dr. Downman. There are likewiſe four Surgeons; and an Apothecary, Mr. Arthur White, who reſides in the houſe.

By the laſt Hoſpital report, from Lady-day 1777, to Lady-day 1778, it appears that ſeven hundred and ſeventy in-patients had been received in the courſe of that year, of whom thirty-ſeven died in the houſe. The number of out-patients in that year was two hundred and five. In the account of patients diſcharged, the writers of the report have omitted to diſcriminate between the in and out-patients. We have the pleaſure to find that at Lady-day 1778 there was a balance in hand of 160 l. together with an accumulating fund of 3500l. capital in the South Sea annuities. The expences of the laſt year amounted to 1868 l.

PHYSICIANS.

Thomas Glaſs, M. D. (Leyden), Fellow of the Royal Society of Medicine at Paris.

"Diſſertatio Inauguralis de Atrophia in genere; Phthiſi Pulmonali, Morbiſque precipuis qui in eam tendunt." 4to. Lugd. Bat. 1731.

"Commentarii duodecim de Febribus ad Hippocratis Diſciplinam accomodati." 8vo. 1742. Tranſlated into Engliſh by N. Peters. 8vo. London, 1752.

"An Account of the Ancient Baths, and their Uſe in Phyſic." 8vo. ibid. 1752. 6d

"A Letter to Dr. Baker on the Means of procuring a diſtinct and favourable Kind of Small Pox; and on the Uſe of cold Air and cold Water in Putrid Fevers." 8vo. ibid, 1767, Pamphlet.

"A ſecond Letter to Dr. Baker on certain Methods of treating the Small Pox in the Eruptive State." 8vo. ibid. 1767, Pamphlet.

"An Examination of Mr. Henry's Strictures on Glaſs's Magneſia." 8vo. ibid. 1774.

Dr. Glaſs firſt practiſed Phyſic at Tiverton in Devonſhire; and has lately reſigned the care of the Exeter Hoſpital, to which he was for many years Phyſician, on account of his advanced age and extenſive practice.

† November, 1778.

Hugh

Hugh Downman, M. D. (Cambridge.)
" Infancy, or the Management of Children, a didactic Poem, in three Books." 4to. London, 1775.
Dr. Downman has lately reſigned the care of the Hoſpital and given up the practice of Phyſic on account of his ill health.
Robert Harvey, M. D. (Cambridge.)
Practiſed Phyſic for ſeveral years at Bridgewater in Somerſetſhire.
* Bartholomew Parr, M. D. (Edinburgh.)
" Diſſert. Inaugur. de Balneo." 8vo. Edin. 1773.
* Thomas Okes, M. D. (Cambridge,) 1769.

Ply-

Plymouth.

The Royal Hospital for sick and hurt Seamen and Marines, is situated at Stonehouse, about a mile from Plymouth. It is very large and convenient, and though without ornament, acquires great dignity from its bulk and simplicity. It is built of rough marble, with Purbeck rusticated coyns. The Hospital, which forms a square, is regularly built, and besides offices, consists of ten buildings, detached from each other for the advantage of ventilation, and preventing the spreading of fire or contagion. Each building contains six well proportioned wards, and each ward will conveniently hold twenty beds, so that in the whole twelve hundred patients may be accommodated with convenience. The area in the middle of the Hospital is handsome and spacious, and the whole, surrounded with a large airing ground, is kept in the most perfect order.

Physician to the Hospital.

Colcheſter.

In our Medical Tour through the ſeveral Counties it gives us a real pleaſure to notice any inſtitution that bid fair, not only to improve and extend the knowledge of medicine, and to diffuſe an uſeful ſpirit of inquiry; but likewiſe to promote a ſtate of harmony, amongſt Medical Practitioners, which we have obſerved, and a worthy correſpondent at Colcheſter joins with us in lamenting, is but too frequently interrupted in country towns. We are therefore happy to inform our readers that with theſe laudable views a MEDICAL SOCIETY was eſtabliſhed at Colcheſter in 1774, which, from conſiſting at firſt of ſeven members only, has gradually encreaſed to nineteen, ſeveral of whom are reſident in different towns of Eſſex and Suffolk. We regret however, on looking over this reſpectable liſt, that it does not include all the Practitioners at Colcheſter, by whom the inſtitution deſerves particularly to be encouraged, as tending to collect uſeful obſervations on the prevailing diſeaſes of that town, and neighbourhood. The meetings of the Society are monthly, and the chair is filled by each member in rotation. Mr. Newell has acted as Secretary to the Society from the time of its eſtabliſhment. In 1776 it became connected with the Humane Society of London, of which each Member is an Aſſiſtant and a Director.

GLOUCESTERSHIRE.

Glouceſter. The County Infirmary at Glouceſter is an elegant and ſpacious building. The annual ſubſcriptions amount to 980l. and the Governors have an accumulating fund of upwards of 18,000l. The number of patients conſtantly in the houſe during the courſe of laſt year was, upon an average, an hundred and fourteen, of which number were

Diſcharged	cured	321
	relieved	80
	at their own requeſt	19
	improper objects	6
	for irregularity	13
	Sent to Bath	5
	Died	17

Made out-patients - -	51
Remaining in the houſe	105
	617

The number of out-patients amounted to two hundred and ſeventy-five; and the expences of the Infirmary during that period amounted to 1533 l.
This Charity is attended gratis by two Phyſicians and two Surgeons.

PHYSICIANS.

HAMPSHIRE.

Wincheſter. The Wincheſter Hoſpital was the firſt County Infirmary eſtabliſhed by voluntary contribution out of London. It was founded in the year 1736, and its inſtitution and ſucceſs were in a great meaſure due to the zeal and humanity of the then Dean of Wincheſter, Dr. Alured Clarke, who, ſome years afterwards, when he became Dean of Exeter, exerted himſelf with the like zeal and alacrity in promoting a ſimilar eſtabliſhment there. This Charity is attended, gratis, by the two Phyſicians at Wincheſter, and by two Surgeons †.

PHYSICIANS.

Dr. Smith, (Oxford.)
Dr. Mackittrick, (Edinburgh.)

† Our application at Wincheſter was not ſucceſsful. We were favoured with a liſt of the Practitioners there by an ingenious Surgeon at Southampton.

Portſmouth. The ROYAL HOSPITAL at HASLAR ſtands on the weſt ſhore of Portſmouth harbour, near the entrance. It is a regular brick building, conſiſting of a front five hundred and ſixty-ſeven feet, and two wings, each five hundred and fifty-three feet in length. Both the front and wings are compoſed of a double range of building, with an area between them, ſo as to admit of the wards having windows on each ſide, for the free circulation of air. It conſiſts of eighty-four wards, each of which is ſixty feet in length, and twenty-two in breadth; a ward for conſumptive patients, which is an hundred feet in length, and fifty in breadth, and many ſmaller apartments. The wards for fevers, ſmall-pox, meaſles, and other infectious diſeaſes are in each wing, ſeparated by a piazza from the main building. Each ward has a water cloſet adjoining, which is ſupplied by a pipe from the reſervoirs, and has another pipe communicating with the drains. The drains, which are built of brick, and arched, are kept clean by the ſea, which is at every tide made to flow through them with conſiderable rapidity. Above theſe are cellars, which are perfectly dry. There are in the

Surgeons to the County Hoſpital.

Hoſpital a bathing-houſe, where patients, on their admiſſion, are (when neceſſary) put into the warm bath, and cleaned; a public waſh-houſe; a ſmoke-houſe, for purifying infected cloaths, and an oven for deſtroying vermin in them.

The Hoſpital includes a ſquare of above ſeven acres; behind it is a neat chapel; and on each ſide, offices, and houſes for the officers. The inner front of the Hoſpital has a large piazza for the patients to walk under in rainy weather. The building is in the middle of a field, or airing ground, near a mile in extent, and is ſurrounded by a high wall. Patients with infectious diſorders are ſupplied with linen and cloaths by the houſe, to avoid the infection that might be introduced by their own; and ſuch as are in want of cloaths, are clothed during their ſtay.

This Hoſpital is intended for the reception of ſick and wounded ſeamen and marines. It was begun in 1746, and finiſhed in 1762. It contains one thouſand eight hundred and eighty-four beds for patients, beſides the neceſſary apartments for officers, nurſes, and attendants; and, being ſupported at the expence of the nation, its funds are not limited.

PHYSICIANS.

HEREFORDSHIRE.

Hereford. A COUNTY INFIRMARY was eſtabliſhed at Hereford in 1775. The ſubſcription was opened by the Rev. Dr. Thomas Talbot, Rector of Ullingſwick, with a benefaction of 500l. and this example of liberality being followed by the nobility, gentry, and clergy, &c. of the County, the Governors were ſoon enabled to open a temporary Infirmary for the reception of thirty patients. But when their capital, which is accumulating, will enable them, they mean to erect a building for the reception of ſixty. A ſubſcription is likewiſe opened for an addition to the intended building, for the reception of lunatics. By a printed ſtate of the Hoſpital from March 1777 to March 1778, it appears that of an hundred and ſeventy-

seventy-two in-patients, five only died, sixty-seven were cured, fifty-nine were made out-patients, six were sent out relieved, three were discharged at their own request, or for ill behaviour, and thirty-two were remaining in the house. Of two hundred and twenty out-patients, an hundred and three were cured, and thirty relieved.

The two Physicians at Hereford and two Surgeons attend this Hospital gratis.

Mancheſter.

An INFIRMARY was founded at Mancheſter in 1752; it contains ſixty-five beds, and is ſupported by annual ſubſcriptions and benefactions. In the courſe of the laſt year, viz. from June 1777 to June 1778, there were admitted four hundred and fifty in-patients, and eleven hundred and eighty out-patients. Mr. White, in his ingenious Treatiſe on the Diſeaſes of Pregnant and Lying-in Women, gives us ſome account of this Infirmary, which it ſeems is ſituated on the higheſt point of ground about the town. The building is long and narrow, having no inner courts; the principal wards are fifteen feet high, and the largeſt of them do not contain more than thirteen beds. A large gallery runs through the whole length of the houſe, and is interſected by the chapel and the great ſtair-caſe which lie open to it; in theſe are windows eaſt, weſt, north, and ſouth, which are ſet open every day as often as the weather permits. In the galleries, and in many of the wards, lead lattices are fixed in the windows. Holes are cut in the upper part of the doors, and the doors are generally open in the day time. In the largeſt wards are openings in the wall likewiſe to admit freſh air. Several air pipes made of wood, of about ſix inches diameter, fixed in every ward, and paſſing through the cieling and roof, have been found very uſeful in this Infirmary. As a proof of the advantages of an hoſpital being well ventilated, it is worthy of obſervation, that in a ſmall crowded houſe which was hired for the reception of patients at the firſt inſtitution of this charity, of four hundred and three patients admitted during the ſpace of three years, twenty-two died in the houſe, which is nearly in the proportion of 1 in $18\frac{1}{3}$, whereas in the preſent building the number of deaths has been only in the proportion of about 1 in $24\frac{1}{4}$.

Warrington. We cannot give our readers an accurate liſt of the Medical Practitioners at this place, but are happy in being able to give them ſome account of the WARRINGTON ACADEMY, an excellent Seminary of general learning, eſtabliſhed in 1757, under the patronage and direction of many perſons of rank and condition; and which, although it is not a chartered foundation, ſeems to have a claim to the rank of a College. It was at firſt inſtituted, and is ſtill conducted on a plan no leſs comprehenſive than liberal, affording general proviſion for the education of youth, whether deſigned for commerce, or for the learned profeſſions, without requiring ſubſcription to articles of faith, or making any religious or political diſtinctions. The following Report will ſhew the preſent ſtate of this uſeful inſtitution, and we ſhall ſubjoin a copy of the laws by which the Students are governed.

"WARRINGTON ACADEMY, June 25, 1778.

"Sir Henry Hoghton, Bart F. R. S. *Preſident.*
"Thomas Butterworth Bayley, Eſq. F. R. S. *Vice Preſident.*
"Arthur Heywood, Eſq. *Treaſurer.*

"*Committee.*

"John Carill Worſley, Eſq. Thomas Percival, M. D. F. R. S. and A. S.
"Benj. Heywood, Eſq. Will. Brookſbank, Eſq. Tho. Carill Worſley, Eſq.
"The Rev. Phil. Holland, the Rev. Hen. Holland, the Rev. R. Godwin,
"Mr. Joſiah Birch, Mr. James Touchet, Mr. Ellis Bent, Mr. John Mort.

"The Truſtees of this Academy beg leave to recommend it to public no-
"tice, as affording peculiar advantages for the liberal and virtuous Education
"of Youth in general, whether intended for Commercial Life, or for any
"of the Learned Profeſſions.

"*The Terms, per Seſſion, are:*

"Commons, excluſive of Breakfaſt, 17l. 17s. Rent of a ſeparate Apart-
"ment in the Buildings, erected for the Uſe of the Students, 3l. 3s. A Courſe
"of Lectures, which is completed in five Years, on Theology, Ethics, Lo-
"gic, &c by the Rev. John Aikin, D. D. 3l. 3s. Claſſics, Greek and Ro-
"man, by the ſame, 3l. 3s. A Courſe of Lectures on the principal Branches
"of Mathematics, and on Natural Philoſophy, Theoretical and Experimental,
"by the Rev. William Enfield, LL. D. 3l. 3s. A Courſe (by the ſame) on
"the following Subjects, Hiſtory, Commerce, Geography, the Theory of
"Language, Elocution, and Compoſition, 3l. 3s. N. B. The two preceding
"Courſes are completed in three years each. Lectures on Chemiſtry, by Mr.
"Aikin, Surgeon, 2l. 2s. On Anatomy, by the ſame, 1l. 1s. N. B. Theſe
"Lectures are read alternate Years. French, by Mr. Hulme, 3l. 3s. Arith-
"metic, Writing, Drawing, by Mr. Bright, 1l. 1s. each. Book-keeping
"and Surveying, by the ſame, 2l. 2s. each.—Each Student attends ſuch Lec-
"tures only as his Friends appoint.—Entrance, 2l. 2s.

"Mr. Aikin propoſes to give to any Gentlemen who are deſigned for the
"Medical Profeſſion, a Courſe of private Inſtructions preparatory to the re-
"gular Study of Phyſic.

"The Fees for Tuition are paid at Entrance: thoſe for Board and Apart-
"ment at the Middle and End of the Seſſion. The Seſſion commences on
"the tenth of September, and is continued without interruption till the
"annual Meeting of the Truſtees, which is held on the firſt Thurſday after
"Midſummer-day.

"If any of the Friends of the Students in this Academy chooſe to entruſt
"the Tutors with the care of the Incidental Expences, they are requeſted
"by the Truſtees to remit, in advance, ſuch Sums of Money as they ſhall
"think ſufficient, that the Students may not be under the neceſſity of tak-
"ing Credit with Tradeſmen.

"No Student is admitted under Thirteen Years of Age.

"*Laws for the Government of the Students.*

"Every Student upon his Admiſſion ſhall have a printed Copy of the
"Laws given him, to which he is to promiſe obedience.

"All the Students ſhall regularly attend the morning and evening devo-
"tions of the Academy; and the public worſhip on Sundays, either at the
"eſtabliſhed church, or ſuch ſeparate congregations as their parents and
"friends ſhall appoint, within the town of Warrington.

"Every

" Every Student ſhall give regular attendance upon his proper Lectures, " and duly perform the Academical Exerciſes enjoined him.

" No Student ſhall be permitted to go to taverns, or public houſes, or any " place of public diverſion, or to be out of his apartments after ten o'clock " in the evening, without leave from one of his Tutors.

" No Student ſhall be permitted to ride out of town without leave from one " of his Tutors; nor to lie out of town without the general leave of his Tutors.

" A Monitor ſhall be appointed, who ſhall give an account of ſuch Stu- " dents as are abſent from morning and evening prayers, or from public " worſhip; and if he wilfully neglect his office, he ſhall be liable to the ſame " puniſhment with the perſon whoſe fault he conceals.

" Each Student is to be anſwerable for any damage done in his own room, " unleſs he can diſcover the offender; and thoſe who injure the other public " buildings, &c. ſhall make good the damage.

" No Student ſhall contract debts with the tradeſmen in the town, without " the knowledge and conſent of his Tutors, and the approbation of his friends.

" No game of chance, or playing for money at any game whatſoever, " ſhall be uſed among the ſtudents.

" The Tutors have a diſcretionary power to make new regulations as occa- " ſion ſhall require, and to enforce the obſervation of the laws by the fol- " lowing ſanctions; pecuniary fines; degradation in the order of prece- " dence; exerciſes; public admonition; confinement; acquainting the Stu- " dents friends with their offences; and laſt of all, expulſion."

Many Gentlemen of the Medical Profeſſion have paſſed through a complete courſe of Academical Learning at Warrington, previous to their commencing the Study of Phyſic at the Univerſity. Of this number are the following: Dr. Farr, of Briſtol; Dr. Parry, of Cirenceſter; Dr. Percival, of Mancheſter; Dr. Taylor, of Bolton; Dr. Vize, of Clonmell, Ireland; Dr. White, of Nottingham; Dr. Wadſworth, of Sheffield.

LINCOLNSHIRE.

Lincoln.

A COUNTY HOSPITAL was opened at Lincoln, in the year 1769, in a houſe hired for that purpoſe; but the governors having purchaſed a piece of ground, have erected on it (after a plan given them by Mr. Carr, of York) a plain, handſome, and convenient building, which is now completed. It is finely ſituated, above Hill, in Lincoln, and conſiſts of four large and lofty wards (beſides other ſmaller rooms) which contain forty beds. At preſent, however, the funds of the Infirmary are ſufficient only for the reception of twenty-four in-patients, and thirty out-patients. It is, indeed, with regret that we find the governors, at the end of the laſt annual report (from Sept. 1776 to Sept. 1777) complaining, "that they have been frequently under the painful neceſſity of refuſing admittance to "diſtreſſed objects, for want of a more general encouragement, to enable them to ſupport the expence." We are told, that, in the courſe of that year, eighty-eight in-patients were admitted, and ſixty-ſeven out-patients. The expences of houſe-keeping, ſalaries, medicines, and ſundries, amounted to 427 l.

This charity is attended gratis by the three Phyſicians at Lincoln, by monthly rotation, and by five Surgeons. Two Apothecaries in the town act as ſuperintending Apothecaries, and Mr. Mather, the houſe Apothecary, who has a ſalary, reſides in the houſe.

NORFOLK.

Norwich *.

The NORFOLK and NORWICH HOSPITAL was founded in 1770, and opened for the reception of in-patients in 1772. The building, which is in the form of an H, is situated at a small distance without St. Stephen's gate, and near the high road to London. It consists of eight wards, which in the whole are capable of containing one hundred beds; but as yet the funds of the charity are not sufficient for the reception of so great a number of in-patients. The wards are of different sizes, and all of them fifteen feet high; they are kept very clean and neat, and well ventilated. This Hospital is attended gratis by four Physicians, three Surgeons, and three assistant Surgeons.

NORTHAMP-

NORTHAMPTONSHIRE.

Northampton.

The COUNTY HOSPITAL at NORTHAMPTON was founded in 1743, and is supported by benefactions and annual subscriptions. The Governors have an accumulating fund of 3800l. capital stock, in the 3 per cent. consol. The expences of housekeeping, medicines, salaries, and gratuities, &c. amounted, in the course of the last year, to 947l. the annual receipt exceeding the disbursement in the sum of 139l. In the course of that year were admitted three hundred and seventy-three in-patients, and eight hundred and five out-patients.

Of the in-patients were discharged, cured,	197
Made out-patients - - - - - - -	72
Relieved - - - - - - - - - - -	17
No better - - - - - - - - - - -	14
At their own request - - - - - -	4
For irregularity - - - - - - -	1
Died - - - - - - - - - - - -	15
Remaining in the house - - - -	53

This charity is attended gratis by the two Physicians, and two Surgeons at Northampton.

NORTHUMBERLAND.

Newcastle. An INFIRMARY for the COUNTIES of NORTHUMBERLAND and DURHAM was opened at Newcastle in 1751. It is a spacious and regularly built stone edifice, capable of containing a hundred and sixty patients, and of its great utility the reader will form some idea when he is told that since its establishment seventeen thousand three hundred and thirty-one patients * have been discharged cured,

* Out-patients seem to be included in this number.

from this excellent Inſtitution. By the laſt report of the ſtate of this charity, from April 1777 to April 1778, it appears that the annual ſubſcriptions amounted to 1100 l. and that there is an accumulating fund of upwards of 9000 l.

The expences of the houſe laſt year amounted to 1388 l.

In-patients admitted in the laſt year were ſix hundred and ſeventy-eight,

Of whom were cured - - - - - -	327
Died in the houſe - - - - - - - -	19
Remaining under cure - - - - - -	139

Out-patients admitted in the laſt year were ſix hundred and ninety-eight,

Of whom were cured - - - - - -	312
Relieved - - - - - - - - - - -	3
Made in-patients - - - - - - - -	13
Remaining on the books - - - - -	173

APOTHECARY.

Mr. Anthony Taylor.

The NEWCASTLE DISPENSARY. This is a new Inſtitution, of ſo late a date as 1777, and in a large, commercial, and populous town, like Newcaſtle, its utility is ſufficiently obvious. The views of this Charity extend to every human diſeaſe, ſo that it is likely to become an uſeful auxiliary to the Infirmary,

mary, which is confined to cafes of Surgery, and fuch Medical Cafes only as cannot fpread their influence by infection. From a ftate of the Difpenfary, printed in October 1778, it appears that in the courfe of the firft year the number of patients admitted was fix hundred and feven,

Of whom were cured - - - - - -	448
Relieved - - - - - - - - -	43
Died* - - - - - - - - - - -	30
Remaining under cure - - - - -	36

And from a table of the diſeaſes of the patients admitted, we are informed that more than two thirds of the cafes were fuch as were improper objects for the Infirmary.

Balmborough.

Mr. Adamson.

At Balmborough Castle (which is so deservedly celebrated for the humane assistance afforded by the worthy Trustees of the late Lord Crewe's Charitable Institution, to ships in distress, and persons shipwrecked on this coast) there are a GENERAL DISPENSARY for the poor, and an INFIRMARY for particular objects, chiefly for sick and wounded seamen; patients from the country however are sometimes admitted into it in cases of Surgery, or in such as require the use of the hot bath.

The Dispensary is open to persons of every country, who appear to be proper objects of charity, and such as cannot be sufficiently relieved as out-patients, or conveniently received into the Infirmary, are, on the recommendations of the Surgeon and Matron, conveyed to Newcastle, and admitted into the County Infirmary. Children, who are brought to the castle, are inoculated and supplied with medicines at the expence of the charity; but if attended at their own houses the Surgeon receives a small gratuity. Poor women, within a certain distance from the Castle, are delivered by the Surgeon at their own houses, on sending half a guinea to the Bailiff of the Castle.

By the last annual report of this Charity, dated October 17, 1778, it appears that in the course of the last year nineteen in-patients, and five hundred and eighty-two out-patients had been admitted,

* All the Surgeons practise Pharmacy.

Of

Of whom were discharged cured - - 420
Relieved - - - - - - - - - - 206
Sent to the Newcastle Infirmary - - - 2
Died - - - - - - - - - - - - 5
Remaining on the books - - - - - 27

Besides a hot-bath, there is likewise an excellent cold-bath, and a sea-water bath, all of which are for the use, not only of the patients of the Charity but of any persons who will pay a trifling gratuity for filling them. There is a convenient laboratory in the Castle for the preparation of medicines; the trustees have likewise provided themselves with all the different instruments of Surgery, together with an electrical apparatus, two sets of an apparatus for drowned persons, &c. all which, particularly the surgical instruments, are occasionally lent to Surgeons in the neighbourhood.

A blue flag with an union quarter is hung out whenever the Surgeon, Mr. Pringle of Belford, attends at the Castle.

OXFORDSHIRE.

Oxford. The Univerſity of Oxford is compoſed of twenty Colleges, which have conſiderable revenues for the maintenance of Fellows * and Scholars; and of five Halls, in which the Students maintain themſelves.

The Academical Year is divided into the four Terms following, viz.

Lent Term, which begins January 14, and ends March 27.
Eaſter Term — April 14 — May 20.
Trinity Term — June 2 — July 17.
Michaelmas Term October 11 - December 17.

Degrees are conferred annually on the day of *the Act*, which is on the firſt Monday after the ſixth of July. The exerciſes for degrees conſiſt of public diſputations and lectures †.

The Botanic Garden, which contains five acres, is ſituated at the eaſt entrance into Oxford, and was

* Dr. Radcliffe founded two travelling Fellowſhips, as an encouragement for young Gentlemen to ſtudy Phyſic in this Univerſity, (to which he was ſo munificent a Benefactor), and as a means of promoting Medical Knowlege; the Fellows are required to be at leaſt Bachelors of Phyſic, and receive 300l. per annum each for ten years, five of which are to be ſpent abroad, in obſerving the ſtate of foreign Phyſic, &c.

† In the next edition of our work, we hope to be enabled to give a more copious account both of this Univerſity, and of that of Cambridge, which have ſo long been conſidered as the moſt ſplendid Seminaries in Europe. Any information on this head, from Oxford or Cambridge graduates, will therefore be highly acceptable to us, as we wiſh to do juſtice to a ſubject of ſo much importance.

founded by the Earl of Danby in 1632; it has an ample endowment for a Profeſſor, and the library is rich in botanic works, and ſpecimens of ſcarce plants. This garden has been rendered famous by the writings of Morriſon, Bobart, and Dillenius; after the death of the latter, in 1747, the preſent learned Profeſſor was nominated by the College of Phyſicians, in whom all future nominations are veſted.

SHROP-

SHROPSHIRE.

Shrewsbury.

The COUNTY INFIRMARY at Shrewsbury was opened in 1747, for the reception and relief of in and out-patients from any part of the kingdom, in every disease, small-pox only excepted. It is supported by voluntary subscriptions and benefactions. All the Physicians at Shrewsbury, and three Surgeons attend it gratis. Patients are admitted on Saturdays at eleven o'clock, and on any other day in cases of extremity. The annual accounts are closed at Midsummer, so that each of its yearly reports includes half of the preceding year. In the course of the last year (ending at Midsummer, 1778) were admitted.

In-patients five hundred and sixty-six,
Of which number were cured, - - - 320
Died - - - - - - - - - - 19

Out-patients seven hundred and twenty-two,
Of whom were cured - - - - - - - 482
Died - - - - - - - - - - - - - 18

Medium number of patients at all times through the last year in the house 66,5. Medium number of out-patients one hundred and thirty-four.

The expences of the House last year amounted to 1400l.

The ingenious Gentleman, to whose communicative disposition we are indebted for the above account, has likewise favoured us with the following general state of in and out-patients annually admitted and remaining in Salop Infirmary, in the several periods following; the numbers being taken at an average, each five years, from the first establishment thereof to Midsummer 1776.

	I.	II.	III.	IV.	V.	VI.
Average number of in-patients annually admitted.	To Midsummer 1751. 191.4	Midsummer 1756. 389.2	Midsummer 1761. 351.6	Midsummer 1766. 395.8	Midsummer 1771. 428.6	Midsummer 1776. 550.2

‡ A County Hoſpital is building at Taunton, but is not yet finiſhed.

STAF-

STAFFORDSHIRE.

Stafford. An INFIRMARY was erected here a few years ago, for which the County is greatly indebted to the active humanity of Mr. Eld, of Seighford. It is a handsome brick building, capable of containing about one hundred patients, and (though erected and supported by the benefactions and subscriptions of the Gentlemen of this County) is open to objects of charity from any part of the kingdom, provided they come recommended by a subscriber. Every subscriber may recommend one in-patient annually, for every guinea subscribed, and one for every ten guineas given as a benefaction. No person can have more than one in-patient at a time, but out-patients may be sent without limitation. Subscribers of two guineas annually, and benefactors of ten guineas, are trustees. It is attended gratis by the Physicians of the town, but the two Surgeons have an annual salary of 30l. each.

PHYSICIANS.

Saliſbury. An INFIRMARY, of which the Earl of Radnor is Preſident, was eſtabliſhed at Saliſbury in 1767. It is an elegant building, in an airy ſituation, and contains ſeventy-five beds, five of which are for venereal patients. The number of patients however at any one time in the houſe ſeldom exceeds forty.

* No County Hoſpital.

The

The annual subscriptions to this useful Charity amounted last year to 682l. and it has an accumulating fund of 1600l. The last Auditors report gives the following state of the patients from Sept. 1, 1777, to August 31, 1778.

In-patients remaining in the house, brought from last year's account		41
Admitted since (51 of which were accidents)		319
		360
Of whom were cured	220	
Relieved	31	
Made out-patients	51	
Discharged for irregularity	8	
Incurable	5	
Died in the house	12	
Remaining in the house, Aug. 31, 1778,	33	
		360

Out-patients on the books, brought from last year's account		224
Admitted since		380
		604
Of whom were cured	175	
Relieved	12	
Omitted to return thanks, though many of them are known to be cured	194	
Made in-patients	15	
Remaining on the books	208	
		604

The expences of the house last year amounted to 811l.

This Infirmary is attended by two Physicians, two Surgeons, a superintending Apothecary, and a house Apothecary, all of whom, the house Apothecary only excepted, attend gratis. The business of the superintending Apothecary, who is not to continue in his office two years successively, is to see that the house Apothecary has done his duty; that the Dispensary and Laboratory are in proper order; to examine Druggists bills, the goodness of the medicines, &c.

The Infirmary in this town has been established about thirty years. The last year's subscriptions amounted to 715l. and from Midsummer 1777, to Midsummer 1778, seven hundred and eighty-five patients were admitted into the house, of whom four hundred and fifty-six were cured, besides a considerable number relieved. This charity is attended gratis by the four Physicians at Worcester, by monthly rotation, and by four Surgeons.

York. A COUNTY INFIRMARY was inſtituted at York in 1740, and is ſupported by benefactions and annual ſubſcriptions. It contains fifty-eight beds. It appears from the laſt report, from May 1777 to May 1778, that eight hundred and ſixty-two patients had been admitted in that year, of which number were diſcharged cured five hundred and forty; relieved an hundred and two; for irregularity eleven; incurable one; died ten; remaining on the books ninety eight.

Beſides the Infirmary, there is at York a LUNATIC ASYLUM, the building for which is not yet completed. It was opened however for the reception of patients in January 1778. There are fifty-four rooms, and in October 1778, there were fourteen patients, who pay eight ſhillings per week for medicines, diet, waſhing, and lodging. Patients are received from any part of the kingdom.

Leeds. The GENERAL INFIRMARY at LEEDS, which receives patients, properly recommended, from any part of the kingdom, was inſtituted in 76-, and the preſent new erection opened in 1771. It was intended to contain ſixty in-patients, but at preſent has only thirty-ſeven beds. It is attended gratis by the two Phyſicians at Leeds, and by three Surgeons,

geons. In the courſe of the laſt year, ending at Michaelmas 1778, were admitted three hundred and three in-patients; of which number were diſcharged cured an hundred and forty-three; relieved ſeventy-two: and of ſix hundred and ſeventy out-patients three hundred and thirty-nine were cured, and one hundred and fourteen relieved.

We ought not to cloſe this ſhort account of the Infirmary, without mentioning the MEDICAL LIBRARY belonging to it; an inſtitution which cannot fail to be of great utility, by extending Medical knowlege, and which we wiſh to ſee imitated in every large country town in the kingdom. The hiſtory of it, as copied from a letter written to us by an ingenious Surgeon, is as follows, "A few years "ago the Faculty here entered into a ſubſcription "of half a guinea per annum, towards a Medical "Library, which was made the property of the "Infirmary. A meeting is held every three months, "when a committee is appointed for purchaſing "books. At the laſt annual meeting the ſubſcrip-"tion was reduced to five ſhillings per annum. "Almoſt the whole of the Faculty at Leeds are "ſubſcribers, together with ſeveral perſons who "are not of the profeſſion. We have likewiſe re-"ceived ſome valuable preſents of Medical Books; "particularly from Dr. Cookſon of Wakefield."

SCOTLAND.

EDINBURGH.

THE UNIVERSITY of EDINBURGH was founded about the year 1583, but the Medical Profeſſorſhips are of a recent date. At firſt in this, as in all the other Colleges of Scotland, only divinity, ſchool philoſophy, and the languages were taught; but the number of Profeſſorſhips has gradually increaſed, there being now twenty-two: and at length a ſchool of Medicine was eſtabliſhed here, which is formed on the model of that of Leyden; and by the great and deſerved reputation of many of its late and preſent Profeſſors, is become one of the moſt celebrated ſchools of Phyſic in Europe.

The Academical year at Edinburgh is divided into the winter and ſummer Seſſions. The former, which is the moſt frequented, begins in October, and ends in April. During this winter Seſſion are taught all the ſeveral branches of Medicine, except Botany. Clinical lectures are likewiſe given by two of the Profeſſors. During the ſummer ſeſſion, which begins in May, and ends in Auguſt, there are lectures on Botany, and Clinical lectures.

There are annually two public days, in June and September, for conferring degrees, which in this, as in the other Scotch Univerſities, are only thoſe of Maſter of Arts, and Doctor. The Principal has a houſe in the College, but all the Medical Profeſſors, and the

Students, live in the town. The Library and Muſeum are ſpacious apartments; and the Anatomical Theatre, which has been lately erected, is a plain octagon building, capable of containing, with eaſe, four hundred perſons; and the number of Students in it of late years has not been far ſhort of that number. The other parts of the College are neither elegant nor commodious.

The expences of Medical education at Edinburgh are by no means conſiderable. The Student pays only three guineas to each of the Profeſſors, whoſe claſs he attends for the Seſſion; three guineas to the Infirmary, for the privilege of attending the practice of Phyſic and Surgery there during a year; and three guineas more if he attends the Clinical lectures. For a trifling ſum of half a crown, paid at his matriculation, he has a right, for the ſpace of one year, to go and read in the Library, which is open three or four days in the week, and which, as may be ſeen by the printed Catalogue *, is one of the beſt choſen collection of Medical books in Europe; and is at liberty alſo to take any number of books to his own apartments, on depoſiting a ſum equivalent to their value in the hands of the Librarian, which is returned to him when the books are brought back.

There are ſeveral boarding-houſes in Edinburgh for the accommodation of Students, who are there lodged and boarded, not only with comfort, but elegance, at the rate of four guineas a month: but many of the Students contrive to live at a much leſs expence.

The Botanic Garden, which may be conſidered as an appendage to the Univerſity, is ſituated at a ſmall diſtance from Edinburgh, on the road to Leith, and is laid out with great taſte; and although the climate it is ſituated in is by no means favourable to vegetation, yet this garden affords as great a variety, not only of the common, but even of the more rare plants, as any botanic garden in Britain. Dr. Hope, the preſent Profeſſor of Botany, has lately erected a monument in this Garden to the memory of the celebrated Linnæus.

The

The ROYAL COLLEGE of PHYSICIANS.

The Royal College of Phyſicians of Edinburgh was founded by a charter from King Charles II. in 1681. which was ratified by parliament in 1685. The foundation of an elegant building for the uſe of the College was laid by Dr. Cullen, in 1775.

The College have five ſtated meetings every year One of theſe, which is for the ſole purpoſe of electing their officers, is held on the firſt Thurſday after St. Andrew's day. At this meeting the College chuſe ſeven Electors, including the Preſident. Theſe Electors, who conſtitute the Council of the College for the enſuing year, retire to a ſeparate apartment, and there elect a Preſident, two Cenſors, a Secretary, Treaſurer, Fiſcal and Librarian. After this election is announced to the College, and the new Preſident has taken his ſeat, he names a Vice-Preſident, and with this the buſineſs of the election meeting is concluded.

The four other meetings are quarterly, on the firſt Tueſday of February, May, Auguſt, and November. At theſe meetings the College admit Licentiates, elect Fellows, and tranſact other parts of their ordinary buſineſs. Licentiates of the College are entitled to practiſe within the city and liberties of Edinburgh, but have no ſeat or voice at any of the College meetings, and are obliged to ſubject themſelves to ſuch laws reſpecting practice, as the Fellows of the College ſhall enact. Every one who has obtained the degree of Doctor of Phyſic, from either of the Scotch Univerſities, is entitled to a licence without examination, on payment of the fees, which amount to about 55l. But graduates of Oxford, or Cambridge, or other Univerſities, muſt undergo a previous trial, at which all the members of the College have a right to be preſent.

There is no claſs of candidates in this, as in the London College, but every member muſt firſt be admitted as a licentiate; and when any licentiate is to be promoted to a Fellowſhip, he is propoſed at a quarterly meeting by ſome member of the College, and ſeconded by another; and at the next quarterly meeting the propoſal is determined by ballot; a majority being ſufficient for admiſſion. By a law lately enacted by the College, no licentiate can be raiſed to a fellowſhip, who practices Surgery or Midwifery.

Beſides the meetings we have mentioned, the Preſident has a diſcretionary power of ſummoning the College together whenever he thinks fit.

The ROYAL COLLEGE of SURGEONS.

The Surgeons of Edinburgh were firſt erected into a body corporate by the Magiſtrates and Council of that city in 1505, and this incorporation was afterwards confirmed and their privileges extended by a charter in the reign of K. William III. By a new charter dated March 14th, 1778, they have been incorporated anew, under the name and title of the Royal College of Surgeons, and authoriſed to carry into execution a ſcheme for making proviſion for the widows and children of their members.

All the Surgeons of Edinburgh practiſe as Apothecaries, and no perſon is permitted to practiſe Surgery or Pharmacy in Edinburgh till he has been admitted a Member of this College; nor in the counties of Lothian, Berwick, Fife, Peebles, Selkirk, and Roxburgh, till he has been examined and approved by the members thereof.

No one is admitted of the College till he has undergone ſeveral examinations by the Society, and paid conſiderable fees of admiſſion, unleſs he is the ſon of a member, or has ſerved an apprenticeſhip of five years to a Surgeon in Edinburgh.

The ROYAL INFIRMARY of EDINBURGH.

This excellent Charity was ſet on foot in 1736, and opened for the reception of patients in 1741. The wards are airy and ſpacious; ſome of them are always empty, with a view to their being well cleaned and ventilated, and the number of patients in the hoſpital at one time is, at a medium, about an hundred and eighty. The number admitted in one year is, in general, between fifteen and ſixteen hundred, and from very accurate reports it appears, that the number of deaths in this Hoſpital has been in the proportion of one in twenty-five.

The lying-in ward is a very large room which holds ten beds. There are ten windows in it, and the height of the room is about fourteen feet. No patients are received into this ward from the middle of July to the twelfth of November, by which means it is ſufficiently purified every year, and none are admitted but ſuch as will ſubmit to be delivered by the Students. Two apartments in this Infirmary are ſet apart for a ſelect number of patients, who are the ſubjects of the Clinical Lectures. Theſe are viſited every day at noon, not by the Phyſicians of the Infirmary, but by one of the Clinical Profeſſors, ſo that the Students have an opportunity of noting the progreſs of each caſe, and twice a week there is a Clinical Lecture.

The Phyſicians to the Infirmary are,
John Hope, M. D. et Prof.
John Steedman, M. D.
James Hamilton, M. D.

The Surgeons to it are all the Members of the College of Surgeons, who attend it by rotation, four of them being appointed annually for that purpoſe.

The PUBLIC DISPENSARY.

This Inſtitution, which was ſet on foot in 1776, and is calculated for the relief of ſuch indigent patients as from the nature of their complaints are improper objects for an Hoſpital, cannot fail of being highly uſeful in ſo large and populous a city as Edinburgh, and more particularly as the Royal Infirmary has no eſtabliſhment for the relief of out-patients. The expence of this charitable eſtabliſhment is defrayed by the voluntary

luntary contributions of humane citizens, and by medicine money collected from Students who attend the case lectures.

An accurate history of the case of every patient is inserted in a register, and to this history regular reports are afterwards added, shewing the progress of the disease, and the effects of the remedies employed. These reports have already given rise to a very useful and ingenious publication by Dr. Duncan, which we hope to see continued.

The Dispensary is attended gratis every Tuesday and Friday at one o'clock by the two following Physicians.

Andrew Duncan, M. D. Fellow of the Royal College of Physicians at Edinburgh, and of the Royal Society of Medicine at Paris, &c.

Charles Webster, M. D. (Edinburgh.)

"Dissert. Inaug. de Vasorum Sanguiferorum libramine." 8vo. Edin. 1777.

The MEDICAL ACADEMY.

The Medical Academy of Edinburgh is an institution which was set on foot about two years ago. The first idea of it was, it seems, suggested by the Students themselves. They were of opinion that a concise introductory course, in which the theory and practice of physic should be combined, could not fail of being useful to those who were beginning to enter on the study of medicine; especially as each of these branches is taught in the University by a separate professor, and lengthened out into a course of six months. They likewise imagined that no inconsiderable advantage might accrue even to the more informed students, by hearing the doctrines of different teachers, as was the case till lately in the University, where the theory and practise were taught alternately by two different professors. These ideas were accordingly put in execution, and the plan improved by the addition of case lectures, similar to those of the Collegium Casuale at Leyden, and to those formerly given by Dr. Rutherford. The subjects of these lectures are selected from the Register of the Dispensary, and they are the more useful, as the Clinical lectures given by the Professors are confined to patients received into the Infirmary, from which many important chronic cases are necessarily excluded.

A building has been lately erected for the use of the Academy, which, besides a spacious apartment for the lectures, contains several other apartments for the library, and for the use of industrious Students, who wish to prosecute experimental inquiries.

The lectures on the theory and practice of physic are delivered by Dr. Duncan; and the case lectures by Dr. Duncan and Dr. Webster alternately. The numerous concourse of students who have been pupils at the Medical Academy, both during the winter and the summer sessions, gives room for presuming that this useful institution has been conducted in such a manner as to give general satisfaction.

The

The PHILOSOPHICAL SOCIETY of Edinburgh.

For an account of the inſtitution and plan of this Society we may refer our readers to the firſt volume of the Phyſical and Literary Eſſays. The meetings of the Society are held every month, and at theſe meetings the members are expected to deliver papers by rotation. After a paper has been read, two members are appointed to examine, and deliver in a written report in regard to it, at the next meeting. Of theſe papers three volumes have been already publiſhed, and a fourth is in ſome forwardneſs

The MEDICAL SOCIETY.

The Medical Society of Edinburgh was inſtituted in 1737, and incorporated by a charter dated at St. James's the 14th of December, 1778. At the meetings, which are held weekly during the winter ſeaſon, papers on Medical Subjects are delivered by the ſeveral members in rotation. But before any diſcourſe is publicly read, it is communicated in writing to every member, and ſome are appointed to impugn, if neceſſary, the doctrines it contains. This method tends at once to excite the emulation and the induſtry of the writer. At theſe meetings likewiſe the doctrines delivered by the Profeſſors in the Univerſity are conſidered and canvaſſed with modeſty, but without reſerve. In this way, the doctrines are more fully underſtood; and when adopted, are received, not on the mere authority of the Profeſſor, but as the reſult of the Students own deliberation and judgment. As the greateſt part of the Gentlemen who have ſtudied Phyſic during the laſt forty years at this Univerſity have been admitted of this Society, the number of its members at preſent exceeds three hundred. The meetings of the Society are now held in their own hall, on which they have beſtowed a thouſand pounds. A liſt of the contributors to this building is ſuſpended in one of the apartments. It contains the names of almoſt all the Medical Practitioners at Edinburgh, of many members of the Society long ſince ſettled in diſtant countries, and of ſeveral other Gentlemen who have chearfully contributed to an undertaking calculated for the improvement of Medical Education. The new building was opened on the 26th of April 1776. Beſides a hall for the weekly meetings, it contains a room for their library, which amounts to ſeveral thouſand volumes; and a repoſitory for curious ſubjects in natural hiſtory and anatomy, and to theſe they intend to add an apartment for chemical and philoſophical experiments, as ſoon as the ſtate of their fund will permit. Contributions for this purpoſe are received by Drs. Cullen, Hope, and Duncan, at Edinburgh; by Mr. Murray, at No. 32, Fleet-ſtreet, London; and by Mr. T. Ewing, Capel-ſtreet, Dublin.

The preſent annual Preſidents of the Society are, Dr. Andrew Wardrope, Dr. Edward Stevens, Mr. Stephen Pellet, and Mr. John Ford.

A LIST

A LIST of PRACTITIONERS of MEDICINE in different Towns and Villages of Scotland.

Aberdeen †.

The Univerſity of Aberdeen, which was founded in 1477, conſiſts of two Colleges, King's College, and Mariſchal College ‡; in each of which there is a Medical Profeſſorſhip.

Dr. STEVENS's HOSPITAL.

This Hoſpital, which was incorporated by act of Parliament in 1730, is capable of containing three hundred patients; but the number of beds in it at preſent does not exceed ninety-one. In the courſe of the laſt year were admitted ſix hundred and ſeventy-two patients, of which number ſix hundred and thirty-three were cured, and fifteen died.

Phyſician, Clement Archer, M. D.
Surgeons, William Ruxton, Eſq.
Mr. John Whiteway.
Aſſiſtant Surgeons, Mr. Samuel Croker King,
Mr. James Boyton.
Houſe Surgeon, Mr. Philip Woodroofe,
Apothecary, Mr. Thomas Kinſley.

St. PATRICK's HOSPITAL for LUNATICS and IDEOTS,

Was founded in 1745, by the celebrated Dean Swift, and incorporated by charter in 1746. In this houſe only thirty-eight lunatics and ideots are admitted, becauſe of the ſmallneſs of the fund. But twelve more patients are received as boarders, at thirty guineas yearly.

Phyſician and Treaſurer, Robert Emmet, M. D.
Surgeon, Mr. John Whiteway.
Apothecary, Mr. Edward Pannell.

MERCER's HOSPITAL,

In Stephen-ſtreet, was opened for the reception of the ſick poor, in Auguſt 1734, being then a houſe built by Mrs. Mary Mercer, containing only ten beds for patients: that number has gradually increaſed to ſixty-two, which are generally full. The Hoſpital might contain more beds, if the fund was ſufficient to ſupport them. The Governors were incorporated by act of Parliament in 1750. In 1776 the interns cured and diſcharged were about five hundred; and about eight thouſand externs were relieved. The annual ſubſcription paid in that year amounted only to 108l. ſo that if the caſual benefactions had

had not been conſiderable, the annual income muſt have fallen far ſhort of the expence. The Phyſician viſits the out-patients Mondays and Fridays, and the in-patients Tueſdays and Saturdays. The Surgeons attend daily in their turns; and neither they nor the Phyſicians receive any ſalary.

Phyſician, Edward Hill, M. D.
Surgeons, Mr. George Daunt,
Mr. Guſtavus Hume,
Mr. Henry Morris,
Mr. Vernon Lloyd,
Mr. Francis Foreſide.
Aſſiſtant Surgeon, Mr. Henry Jebb.

The HOSPITAL for the Relief of Poor LYING-IN WOMEN

Was opened in 1745, by the late Dr. Bartholomew Moſſe. The preſent building, in Great-Britain-ſtreet, was finiſhed in 1757. In this new Hoſpital, from December 1757, to October 1777, twelve thouſand three hundred and fifty-ſix women have been delivered of ſix thouſand ſix hundred and thirty boys, and five thouſand nine hundred and thirty-ſix girls; two hundred and eight women having had two children, and two others three at a birth.

Maſter of the Hoſpital and Phyſician, Frederick Jebb, M. D.
Conſulting Phyſician, Francis Hutcheſon, M. D.
Surgeon, M. Samuel Croker King.
Apothecary, Mr. John Wade.

St. NICHOLAS' HOSPITAL

Was opened in 1753, for the reception of Surgical patients, and contains forty beds. The following Surgeons, who officiate gratis, attend alternately every morning from eight till ten.

Mr. James Dillon,
Mr. Mark Rorke,
Mr. James Sullivan,
Mr. John Berne.
Mr. Michael Keogh,
Mr. Thomas Meyler,
Mr. William Deaſe,

The MEATH HOSPITAL,

Appointed by Parliament in 1774 to be the County Infirmary for the county of Dublin. Was at firſt inſtituted to relieve the poor manufacturers in the Earl of Meath's Liberty, and has, for above theſe twenty year's paſt, ſupported annually from two hundred and fifty to three hundred in-patients, and relieved about three thouſand out-patients. The Governors have built a large commodious Hoſpital on the *Combe*, on which they have expended above 2000l. It is now

open for the reception of patients. It is attended by two Phyſicians, and ſix Surgeons, all of whom have reſigned to the Hoſpital the bounty of 100l. annually, paid by government, and ſerve without any reward.

Phyſicians, John Charles Fleury, M. D.
Daniel Cooke, M. D.
Surgeons, Mr. Alexander Cunningham,
Mr. Henry Hawkſhaw,
Mr. William Vance,
Mr. James Mills,
Mr. Arthur Winter,
Mr. Iſrael Read.
Houſe Apothecary, Mr. William Cockridge,

The CHARITABLE INFIRMARY,

On the Inns Quay, (the firſt inſtitution to which the poor of this city and kingdom ever had acceſs for relief in their different diſeaſes,) was opened in 1728. Six Surgeons were the founders of this charity. In the courſe of the laſt year, the number of in-patients was four hundred and ſeventy-two, and out-patients thirteen thouſand five hundred and forty-nine. It is attended gratis by the Phyſicians and Surgeons. The Phyſicians viſit their patients on Tueſday and Fridays, and the Surgeons attend daily.

Phyſicians, John Purcell, M. D.
Garret Huſſey, M. D.
Surgeons, William Ruxton, Eſq.
Mr. Henry Lyſter,
Mr. John Neale,
Mr. Robert Bowes,
Mr. James Taſker,
Mr. Loftus Dempſey,
Mr. George Stewart,
Mr. Francis M'Evoy.

The NEW HOSPITAL for INCURABLES,

On Lazer's Hill, at preſent admits forty-two patients, who are maintained and furniſhed with cloaths, and other neceſſaries, at the expence of this charity. Conſtables and others receive a reward of half a guinea every time they bring to this houſe perſons who are found expoſing their deformities in the ſtreets.

Phyſician, Conſtantine Barbor, M. D.
Surgeons, William Ruxton, Eſq.
Mr. Henry Morris,
Mr. Philip Woodroofe,
Mr. James Taſker.

The

The LOCK HOSPITAL, in Clarendon Street,

Was instituted in 1755, by Mr. George Doyle, Surgeon, and is supported by voluntary subscriptions. The number of patients admitted into this house has been at a medium about one hundred and thirty yearly, during the last seven years, and the annual expences have not exceeded 160l.

Physicians. Sir Nathaniel Barry, Bart. M. D.
Francis Hutcheson, M. D.
Surgeons. Mr. George Doyle,
Mr. David Fitzgerald,
Mr. Carden Lee.

The INFIRMARY for sick and wounded Soldiers of the Army, is situated in James Street.

Surgeon. Mr. George Stewart.
Apothecary. Mr. Henry Hunt.

SURGEONS appointed by Act of Parliament to examine and certify the Qualifications of Surgeons, who are Candidates for the County Infirmaries †.

William Ruxton, Esq.
Mr. John Whiteway,
Mr. James Boyton,
Mr. Gustavus Hume,
Mr. Vernon Lloyd,
Mr. Samuel Croker King,
Mr. Philip Woodroofe,
Mr. George Daunt,
Mr. Henry Morris,
Mr. Francis Foreside.

SECTION III.

FOREIGN LISTS.

HOLLAND.

THERE is no College of Physicians in any of the United Provinces. Physicians, before they can be legally authorised to practise, are required to produce a Diploma from some Dutch University, which is registered by the magistrates of the town in which they mean to reside.

† Infirmaries have been erected by Parliament in all the Counties of Ireland. In our next Edition, we hope to be enabled to give an account of some of these institutions.

The

The HAGUE.

Phyſicians, &c. to the Stadtholder.

Dr. Jerom David Gaubius, Firſt Phyſician.
Dr. Walter Van Doeveren, Conſulting Phyſician.
Both theſe Phyſicians are Profeſſors at Leyden, where they reſide.
Dr. Velſen, } Phyſicians in Ordinary.
Dr. Onimus, }
Mr. Schenk, Principal Surgeon.
"Traité ſur la Cigüe." 8vo. à la Haye.
Mr. Schoonderhaagen, Surgeon to the Houſehold.
Mr. Duval, Apothecary to the Houſehold.

There are two Profeſſorſhips at the Hague, which are handſomely endowed. One of theſe is for Botany, and the other for Anatomy, Surgery, and Midwifery. The Profeſſors deliver their Lectures in Dutch. There are ſimilar eſtabliſhments in almoſt every large town in the United Provinces.

Dr. Swenke, the Profeſſor of Botany, gives a Lecture every Tueſday and Friday, at five o'clock in the afternoon, from the firſt of May till the laſt week in September.

Dr. Huibertz, the Profeſſor of Anatomy, gives a Lecture on Anatomy or Surgery every Thurſday; and on the firſt Tueſday of every month, a Lecture on Midwifery.

There is no Hoſpital at the Hague. The poor are attended at their own houſes by four Phyſicians, and the ſame number of Surgeons, who have each their reſpective diſtrict, and ſalaries from the town.

The Phyſicians of the greateſt reputation at the Hague are,

Dr. Joriſſen, Senator of the Hague,
Dr. Weſterhoff, Senator of the Hague,
Dr. Van Hoey,
Dr. Van den Boſch.
Author of a Diſſertation, in Dutch, on the Diſeaſes incident to the Climate of Holland.
Dr. T. Bienville.
"La Nymphomanie où Traité de la Fureur Uterine." 8vo. Amſterdam, 1771.
This work has appeared in Engliſh.
"Le pour et le contre de l'Inoculation de la Petite Verole." 8vo.
"Recherches Theoriques et Pratiques ſur la Petite Verole." 8vo. Amſterdam, 1772.
"Traité des Erreurs populaires ſur la Santé." 8vo. la Haye, 1775.

LEYDEN.

The Univerſity of Leyden was founded in 1574. The two firſt Profeſſors of Phyſic were Peter Foreſtus and Laurence Orſchot. The Anatomical Theatre was erected in 1597, and the chair given to Peter Paaw. Three years after this, the Botanic Garden was opened. Our country-

countryman, Dr. Pitcairne, taught Phyſic here with great reputation; but the celebrity of this Univerſity is more particularly due to the immortal Boerhaave, and to the abilities of Albinus and Gaubius; to whoſe names we might add thoſe of many other eminent Profeſſors, who have at different times ornamented the Leyden School. Many of the preſent Profeſſors are men of great and deſerved reputation. The management of this Univerſity is entruſted to three Curators, who are generally perſons of diſtinction, choſen by the States; and who are aſſiſted in their office by the four Burgomaſters of the city of Leyden.

The Library contains a very numerous and valuable collection of books and MSS. particularly on the ſubject of Medicine. The Univerſity has lately added to it the Library of Wepfer. Beſides an uſeful cabinet of Natural Hiſtory, which is in an apartment in the Botanic Garden, there is a pretty numerous collection of Anatomical Preparations in the Theatre, many of which were made by Rau and Ruyſch; but the greateſt acquiſition the Univerſity has made in this way, is in the collection of preparations made by the late celebrated Profeſſor Albinus.

There are twenty-ſix Profeſſors in the Univerſity, but of theſe we ſhall only mention thoſe who are attached to the different branches of Medicine, Natural Hiſtory, and Natural Philoſophy.

Adrian Van Royen, M. D. F. R. S. &c. Hon. Prof. of Med. and Botany.
- "Oratio quâ jucunda utilis ac neceſſaria Medicinæ Cultoribus commendatur Doctrina Botanica." 4to. 1729.
- "Carmen Elegiacum de Amoribus et Connubiis Plantarum." 4to. 1732.
- "Floræ Leydenſis Prodromus exhibens Plantas quæ in Horto Academico Lugduni Batavorum aluntur." 8vo. 1740.
- "De Hiſtoria Morbi, primo et perpetuo Therapiæ Medicæ fundamento." 1743.
- "Oratio de Hortis publicis præſtantiſſimis Scientiæ Botanicæ adminiculis." 1754.
- "Carmen Elegiacum de juſto Motuum Corporis Animique Moderamine." 1759.
- "Carmen Elegiacum de Morbis Ætatum." 1771.

Jerom David Gaubius, M. D. Honorary Profeſſor of Chymiſtry and the Practice of Phyſic, Firſt Phyſician to the Stadtholder, F. R. S. &c.
- "Oratio de Chymiâ Artibus Academicis jure inferendas." 4to. 1731.
- "Libellus de Methodo concinnandi Formulas Medicamentorum." 8vo. 1738.
- "Sermones de Regimini mentis quod Medicorum eſt." 4to. 1747, et 1763.
- "Inſtitutiones Pathologiæ Medicinalis." 8vo. 1758, 1765. 12mo. 1775.

Frederick Bernard Albinus, M. D. Profeſſor of Anatomy and Phyſiology.
- "Diſſ. Medica de Deglutitione." 1740.
- "Oratio Academica de Ambulatione Vitæ maxime neceſſaria." 4to.
- "De Natura Hominis." 8vo. 1776.
- "Suppellex Anatomiæ." 8vo. 1776.

Walter Van Doeveren, M. D. (formerly Profeſſor of Phyſic at Groningen) Profeſſor of the Practice of Phyſic.
- "Diſſertatio de Vermibus Inteſtinis hominum." 1753.

"De

"De imprudenti Ratiocinio ex Obſervationibus et Experimentis Medicis." 1754.
"De Sanitate Groningenſ. tuendâ." 4to.
"Sermo Academ. de Recentiorum inventis Medicinam hodiernam veteri preſtantiorem reddentibus." 4to. 1771.

Edward Sandifort, M. D. Profeſſor of Anatomy and Surgery.
"Diſſertatio inauguralis de Pelvi." L. B. 1763.
"Theſaurus Diſſertationum ad Medicinam, &c." 2 vols. 1768.
"Oratio de Circumſpecto Cadaverum examine, optimo Practicæ Medicinæ adminiculo." 4to. 1772.

John David Hahn, M. D. (formerly Profeſſor of Natural Philoſophy, Chymiſtry, and Botany, at Utrecht) Profeſſor of Chymiſtry and the Practice of Phyſic.
"De Efficaciâ Mixtionis in mutandis Corporum Voluminibus." 4to. Utrecht, 1751.
"Oratio de Uſu Venerorum." 4to. 1775.
"Oratio de Medico Speculatore." L. B. 1775. 4to.
"J. Schilling de Leprâ et Elephantiaſi Curâ J. D. Hahn." L. B. 1778. 8vo.

Nicholas George Ooſterdyk, M. D. (Son to the Profeſſor at Utrecht) Profeſſor of the Theory of Phyſic.
"Diſſertatio inauguralis de Aceto.." 4to. Utrecht, 1762.
"Oratio de Studio Medico in Commune Reipublicæ bonum quâvis operâ dirigendo." L. B. 4to. 1775.

Adrian Van Royn, M. D. F. R. S. (Nephew to Dr. Adrian Van Royn) Profeſſor of Botany.

John Le Francq Van Berkeley, M. D. Profeſſor of Natural Hiſtory.

John Allemand, LL. D. F. R. S. Profeſſor of the Mathematics, and Natural Philoſophy.

FRANEKER.

The Univerſity of Franeker was founded in 1586. There is a good Botanic Garden here, but the number of Medical Students is very inconſiderable. The Profeſſors are,

William Ouwens, M. D. Honorary Profeſſor of Chemiſtry and Botany.

Chriſtian Everhard de Lille, M. D. Prof. of Anatomy and Surgery.
"De Palpitatione Cordis et de Arteriarum Pulſus Intermiſſione." 8vo. Zwollæ, 1755.

Gadſo Koopmans, M. D. Prof. of Chemiſtry, and the Materia Medica.

Adolphus Ypey, M. D. Prof. of Botany.
"Obſervationes Phyſiologicæ de Motû Muſculorum Voluntario et Vitali." Franequeræ, 1775, 8vo.

GRONINGEN, founded in 1614.

The Profeſſors of Medicine in this Univerſity, which is more frequented than that of Franeker, are,

Paul Graeven, M. D. Prof. of the Theory and Practice of Phyſic, and of Chemiſtry.

"Dictata

" Dictata de Materia Medica."
" Oratio Prophylaxis Inſitiva videtur ſatis certa tutaque." 1755.
" De Anatomiæ Pathologicæ Utilitate ac Neceſſitate." 1771.
" De Medicina ex Urina." 1771.

Wymold Muniks, M. D. Prof. of Anat. and Surgery.
" De Lue Venereâ ejuſque præcipuis auxiliis, inter quæ Van Zwietenii et Cl. Plenkii Remedia examinantur." 1769.

Peter Camper, M. D. Honorary Profeſſor of Anatomy, Chemiſtry, and Botany.

This Phyſician, who, when in England, made many of the drawings for Dr. Smellie's work, lives now on his eſtate of Lancun, in the neighbourhood of Franeker, where he has a large and very valuable Muſæum of Anatomy, and Natural Hiſtory, both which he continues to cultivate with great zeal, and at a very uncommon expence.

" Nomen Claſſium Ringentium a Cl. Royano datum Magis convenit, quam illud Didynamiorum a Linnæo." Diſſert. inaug. L. B. 4to. 1746.
" Demonſtrationes Anatomico-Pathologicæ, forma Atlant." 2 vols. 4to. cum Figuris, Amſterdam, 1760.
" Epiſtola ad Magnum Albinum." 4to. Groning. 1767.
" Oratio de Analogia inter Animalia et Stirpes." 4to. 1764.
" Epiſtola ad Davidem Van Geſſcher." 8vo. 1771.
" De Emolumentis et Optimâ Methodo Inſitionis Variolarum." 8vo. 1774.
" Obſervationes circa Callum Oſſium fractorum." Vide Eſſays Phyſ. and Literary, vol. III. Art. XXVIII.
" On the Signs of Life and Death in New-born Children." 1774.
" Obſervations on the Crime and Accuſation of the Murther of New-born Children." 1774.
" Obſervations on the Mortality of Cattle." 1769.

Theſe three laſt performances are publiſhed in Dutch. Several of Profeſſor Camper's detached Pieces are to be met with in the Harlem Memoirs, the Memoirs of the Academy of Surgery, and other Collections.

UTRECHT, founded in 1636.

This Univerſity ſeems to be the next in reputation, though not in ſeniority, to that of Leyden. The Profeſſors here are,

John Ooſterdyk Schacht, M. D. Profeſſor of the Theory and Practice of Phyſic.
" De Motû Planetarum in Orbitis ellipticis." 1726, cum Figuris.
" De Secretione animali." 1726.
" Inſtitutiones Medicinæ Practicæ." 4to. Utrecht, 1767.
" Dictata Medicinæ Practicæ." 8vo.

Peter Luchtmanns, M. D. Prof. of Anatomy and Surgery.
" De Anatomicis ſeculi XVIII. Incrementis." 1760.

Alexis Peter Nahuys, M. D. (formerly Profeſſor at Harderwyk,) Prof. of Botany, Phyſiology, and Chemiſtry.
" De Baſi Salis Marini, Nitri, et Aluminis." 1761.
" Nova quædam Experimenta Chymica." 1767.
" De Qualitate noxia Aeris in Noſocomiis et Carceribus." 1770.

" Oratio

" Oratio de Anatome, Chirurgiæ dextra, ipſiuſque Neglectu uberrimæ Calamitatum et Errorum Fonte." 1772.

HARDERWYCK.

This Univerſity, which was re-eſtabliſhed in 1600, has two Profeſſors of Medicine.

Rodolphus Forſter, M. D. Prof. of Anatomy, Surgery, and the Theory of Phyſic.
" De Cantharidibus." 1775.

Mathias Van Geuns, M. D. Profeſſor of Chemiſtry, Botany, and Midwifery.

AMSTERDAM.

There are in this city a large Hoſpital, a good Botanic Garden, and a Theatre, in which Anatomy and Surgery are taught with great preciſion. It was in this Theatre that the famous Ruyſch formerly delivered his lectures, and Dr. Camper, before his removal to Groningen, was for ſome time Profeſſor here. The preſent Profeſſor is,

Andrew Bonn, M. D.
" De Continuationibus Membranarum." 1763.

There are two Profeſſors of Botany.

John Burmann, M. D.
" Plumieri Faſciculi Plantarum Americarum, curâ J. Burmanni." 1775.
" Dix Decades ou Deſcriptions des Plantes d'Afrique."
" Theſaurus Ceilenicus," cum Figuris.
" Rumphii Herbarium Amboinenſe." 6 vol. Folio, cum Figuris. Curâ Burmanni.
" Index in Hortum Malabaricum et Rumphii Herbarium."
" J. Burmanni Waechendorſia ou Deſcription d'une nouvelle Plante du Cap."

Nicholas Lawrence Burmann, M. D. Son to the other Profeſſor.
" Deſcription des Plantes des Indes, avec des Planches et Deſcription de la Flora Indica du Cap.

HOSPITAL *(Gaſt-huys)* at Amſterdam.

This building, which contains about five hundred patients, who are in ſeparate beds, is divided into four large airy wards, which are paved with marble, and kept extremely clean. Two of theſe wards are for men, and the other two for women. The Phyſicians to the Hoſpital are,

Dr. Burmann,
Dr. Ooſterdyck.

Surgeons,
Mr. Labee,
Mr. David Van Geſſcher.

The

The other Phyſicians and Surgeons in the greateſt repute at Amſterdam are,

Dr. Hovius, who has a valuable collection of Diſeaſed Bones.
Dr. L'Obé.
Dr. De Famars.
Dr. De Gorter.
Dr. Houttuin.
Dr. Verſchuir.
"Diſſert. inaugur. de Venarum Irritabilitate, &c." 4to. Groningen, 1767.

SURGEONS.

Mr. De Verdun.
Mr. St. Eyger.
Mr. Titſing.

The CHIRURGICAL SOCIETY at Amſterdam, which is compoſed of the moſt eminent Phyſicians and Surgeons of that city, gives a gold medal to the beſt writer on a Surgical queſtion, which is propoſed annually.

It is to this city we are indebted for the firſt inſtitution of a HUMANE SOCIETY for the Recovery of Drowned Perſons.

At Harlem, Rotterdam, and Uiſſinguen, in the United Provinces, Societies have been inſtituted for the improvement of Science, and premiums have annually been propoſed by them. The two former have publiſhed ſeveral volumes of their tranſactions, which contain ſo many uſeful Medical Papers, that it were to be wiſhed they were not wholly confined to the readers of Low Dutch.

HANOVER.

STATE PHYSICIANS.

John George Zimmermann, M. D. (Gottingen,) Member of the Royal Academy of Sciences at Berlin, &c. Archiater.
"Diſſert. inaug. de Irritabilité." Gotting. 4to. 1751.
Dr. Zimmermann is a native of Zurich, and is well known by his Eſſay on National Pride, his Treatiſe on the Dyſentery, and other works.
Dr. Müller.
Henry Marcard, M. D.

GOTTINGEN.

The Univerſity of Gottingen was founded in 1734, by King George II. The number of Medical Students here at preſent is inconſiderable. The Profeſſors begin their courſes at Michaelmas and Eaſter.

Profeſſor

Professor of the Practice of Physic and Surgery,	Augustus Gottlieb Richter, M.D. &c.
——— *of Anatomy and Midwifery,*	Henry August. Wrisberg, M. D. &c.
——— *of the Practice of Physic and the Materia Medica,*	Ernestus Godfrey Baldinger, M. D. &c.
——— *of Botany,*	J. Andrew Murray, M. D. &c.
——— *of Chemistry.*	J. Frederick Gmelin, M. D.
——— *of Natural History, and Keeper of the Museum,*	——— Blumenback, M. D.

The ROYAL SOCIETY of Gottingen was instituted by King George II. in 1751. Eight volumes of their Transactions have been published in 4to. under the title of "Commentarii Societatis Regiæ Gottingensis." The illustrious Baron Haller was President of this Society from the time of its institution till his death. No person hath as yet been appointed to succeed him, and the celebrated Michaelis, Knight of the Polar Star, and Professor of the Oriental Languages in the University, has lately resigned the office of Vice President. The Society meet on the first Saturday of every month.

VIENNA.

Physicians to the Court, all of whom rank as Counsellors of State.

Baron Anthony Storck, First Physician to their Imperial Majesties, President and Director of the Faculty of Medicine, &c.
Leopold de Lebzelfern, M. D. &c.
Paul Michael de Zwenoff, M. D. &c.
John Andrew Kesler de Rosenheim, M. D. &c.
George Ignatius de Humelaver, M. D.
John Baptist Kolmann.
John Inghenouz, M. D. F. R. S. &c. at present in London.
Anthony Markmuller, M. D.
Gaspard Stuntzer, M. D.
John N. de Humbourg, M. D.

Surgeons in Ordinary to their Imperial Majesties.

Mr. Joseph Noel Palucci.
Mr. John Ducreux.
Mr. John Valingen.
Mr. Alexander Brambilla.

Faculty of Medicine.

Professor of the Practice of Physic *.	
——— *of Physiology, and the Materia Medica,*	Henry Joseph Collin, M. D. &c.
——— *of Anatomy,*	Joseph Barth, M. D. &c.
——— *of Chemistry and Botany,*	Nicholas Joseph Jacquin, M. D.

* This chair became vacant by the death of the celebrated De Haen, and we have not yet learnt the name of his successor.

Professor

Professor of Surgery, Ferdinand Leber, M. D.
——— *Midwifery*. —— Lebmacher, M. D.
——— *Surgery and Anatomy*, —— Steidele, M. D.

BERLIN.

The Royal College of Physicians.

His Excellency Count Reuss, Grand Marshal of the Court, President.
Dr. Muller, Physician to the King, and Director of the College, &c.
Dr. Cathenius, Counsellor of State, Physician to the King, and Member of the Academy of Sciences, &c.
Dr. Lesser, Consulting Physician to the King.
Dr. Willheim Mohsnu.
Dr. Willheim Commaun.
Dr. Mutzel, Physician to the Great Hospital.
Dr. Roloffe, of the Academy of Sciences, and Physician to the Great Hospital.
Dr. Kurella.
Dr. Sperkun.
Dr. Pott, Member of the Academy of Sciences, and Professor of Chemistry.
Dr. Gleditch, Member of the Academy of Sciences, and Professor of Botany.
Dr. Sprogel, Professor of Physiology, and Secretary to the College.
Dr. Brandes, Professor of Chemistry and Member of the Royal Academy of Sciences.
Dr. Walter, First Professor of Anatomy, and Member of the Royal Academy of Sciences.
Dr. Fritze, Professor of Therapeutics.
Dr. Henkel, Professor of Surgery and Midwifery.
Dr. Alhemann, Professor of Pathology.
Dr. Mayer, Second Professor of Anatomy.
Dr. Christopher Charles Brum.
Dr. Charles Augustus Brum.
Dr. Gemmel.
Dr. Krunetz, Member of the Royal Society of Gottingen.
Dr. Borchard, Physician to the Great Hospital.
Dr. Zeucker, Member of the Royal Academy of Sciences.
Dr. Gerard, ditto.
Dr. Goenner.
Dr. Martini, Member of the Imperial Academy.
Dr. Peliffon, Physician to the French Colony.
Dr. Wurmandsdorf.
Dr. Siefarth.
Dr. Molzahu.
Dr. Charles Willheim, Physician to Prince Henry of Prussia.
Dr. Kratz.
Dr. Sonenbourg.
Dr. Schreiber.
Dr. Schoeder.
Dr. Pallas.
Dr. Scheffer.

Dr. Richter.
Dr. Krueyer.
Dr. Dietterich.
Dr. Knapp.
Dr. Bechſtadt.
Dr. Gotth Brugne.

COLOGNE.

PHYSICIANS to the Elector.

Stephen Kerick, M. D. Counſellor of State, and Firſt Phyſician.
Alexander Vilenne, M. D.

SURGEONS.

Mr. Zartman, Mr. Richter.

APOTHECARIES.

Mr. Hittorff, at Bonn.
Mr. Ruland, at Auguſtuſbourgh.

MENTZ.

FACULTY of MEDICINE.

Dr. Nauheimer, Counſellor of State, Firſt Phyſician to the Elector, and Profeſſor of the Practice of Phyſic, Preſident.
Dr. Ittner, Counſellor of State, Phyſician to the Elector, Profeſſor of Anatomy, and Phyſician to the Military Hoſpital.
Dr. Holthoff, Phyſician to the Houſehold, and Profeſſor of the Materia Medica.
Dr. Burkhari, Phyſician to the City Hoſpital.
Dr. Delvaux.
Dr. Schwind.
Dr. Hegel.
Dr. Balling.
Charles Strack, M. D. Prof. of Med. at Mentz.
Dr. Holthoff.
Dr. Rath.
Dr. Thiry.

SURGEONS.

Mr. Kircher, Mr. Lang, Surgeons to the Elector.
Mr. Riedt, Surgeon to the Military Hoſpital.

APOTHECARY to the COURT.

Mr. Valekham.

TREVES.

PHYSICIANS to the ELECTOR.

John G. Haupt, M. D. Counſellor of State, and Firſt Phyſician.
Dr. Horn.
Dr. Cohauſen, Counſellor of State, and Firſt Phyſician to the late Elector.

SUR-

SURGEONS to the COURT.

Mr. Caſpari, at Coblentz.
Mr. Moritz, at Treves.

PHYSICIAN to the Military Hoſpital.

Dr. Seidenbourg.

HESSE CASSEL.

PHYSICIANS to the Court.

John Ferry, M. D. Counſellor of State, and Firſt Phyſician.
Dr. Huber.
Dr. Stein.

SURGEONS to the Court.

Mr. Girſol, Firſt Surgeon, Mr. Cornilius, Mr. Wegehauſen.

APOTHECARY to the Court.

Mr. Marggraf.

PHYSICIAN to the Heſſian Troops in America.

Chriſtian Frederick Michaelis, M. D.
" Diſſertatio Inaug. de Angina Membranacea." 8vo. Argentor. 1777.

BRUNSWICK.

Firſt PHYSICIAN.

Dr. Bruckmann.

HAMBURGH.

PHYSICIAN to the Hoſpital.

Dr. Mumſen.

LORRAINE.

The Royal College of Phyſicians.

This College was inſtituted at Nancy in 1752, by Staniſlaus, King of Poland, on a plan no leſs ſingular than uſeful; that prince, beſides inveſting it with the privileges uſually enjoyed by Colleges of Phyſicians in the different countries of Europe, likewiſe founded a Botanic Garden, which he annexed to the College, together with Profeſſorſhips in the different branches of Medicine, all of which are now taught here with great reputation. His Poliſh Majeſty likewiſe directed, that for the purpoſe of improving and extending Medical Knowledge, the College ſhould be empowered to elect a certain number of Honorary Fellows, and Correſponding Members, reſident in different parts of Europe. The Botanic Garden belonging to the College contains upwards of a thouſand plants arranged according to the Linnæan ſyſtem; the College is likewiſe in poſſeſſion of a valuable Medical Library.

PRESIDENT.

Dr. Deſvillers, Director of the Royal Botanic Garden, and Phyſician to the Hoſpital of St. Julian.

FELLOWS.

Dr. Platel, Conſulting Phyſician to the late King of Poland, Secretary.
Dr. Francois, Phyſician in Ordinary to the late King of Poland.
Dr. Harmant, Phyſician in Ordinary to the late King of Poland, Profeſſor of Chemiſtry, Phyſician to the Hoſpital of St. Staniſlaus, and Subdirector of the Royal Academy of Sciences at Nancy.
Dr. Thomas.
Dr. Landeutte, Phyſician to the Military Hoſpital at Bitche.
Dr. Guillemin, Profeſſor of Botany.
Dr. Buchoz, Conſulting Phyſician to the late King of Poland.
Dr. Maury, at Sezanne.
Dr. Kenens, Phyſician to the Military Hoſpital at Nancy.
Dr. Lallemand.
Dr. Morin Saint-Pons.
Dr. Chatillon.
Dr. Gormand.
Dr. Tournay, Profeſſor of the Practice of Phyſic.
Dr. Jadelot, Profeſſor of Anatomy and Phyſiology.

HONORARY FELLOWS.

Count D'Auſlance.
Count de Treſſan.
Count de Rouvrois.
The Marquis Deſſalles.
The Prince of Loeweſtein.
The Marquis de la Galaiziere.
The Preſident de Coeurderoy.
Joſeph Lieutaud, M. D. Firſt Phyſician to the King of France.
Joſ. F. de Laſſonne, M. D. Firſt Phyſician to the Queen of France, and Preſident of the Royal Society of Medicine at Paris.
Sir J. Ronnow, Knight of the Polar Star, Phyſician to the King of Sweden, and Preſident of the Royal Academy at Stockholm.
Dr. Pinard, Profeſſor of Botany at Rouen.
Dr. Athalin, Profeſſor of Medicine at Beſançon.
Peter Bercher, M. D. Firſt Phyſician to the Duke of Parma.
Francis Thierry, M. D. Phyſician to the King of France.
J. F. Morand, M. D. Phyſician to the Hoſpital of Invalids at Paris.
James Reinbold Spielman, M. D. Profeſſor of Chemiſtry and the Materia Medica at Straſburgh.
Dr. Maret, Secretary to the Royal Academy of Sciences at Dijon.
The Viſcount de Briouze, M. D.
Natalis Joſeph de Necker, M. D. Botaniſt to the Elector Palatine at Manheim.
P. Coſte, M. D. Member of the Royal Academies of Stockholm, Nancy, and Lyons, and of the Medical Society of London, &c. Phyſician to the Military Hoſpital at Calais.
Tribolet de la Lance, M. D. Phyſician to the Hoſpital, and Secretary to the Oeconomical Society at Berne.
Anthony Louis, M. D. Secretary to the Royal Academy of Surgery, &c. at Paris.

Samuel

Samuel Foart Simmons, M. D. Member of the Royal College of Phyſicians, &c. at London.

Felix Vicq D'Azyr, M. D. Secretary to the Royal Society of Medicine at Paris.

CORRESPONDING MEMBERS.

Dr. Pierre, Phyſician at Luneville.
Dr. Olivier, Member of the College of Phyſicians at Lyons.
Dr. Gerard, Phyſician at Rembervillers.
Dr. Garnier, Phyſician at Neufchateau.
Dr. Sauvage, Phyſician at Bois-le-Duc.
Dr. Stahl, Phyſician to the Prince of Deux Ponts.
Dr. de la Roberdiere, Phyſician at Vire in Normandy.
Dr. Trecourt, Phyſician at Cambray.
Dr. Grunwald, Phyſician at Bouillon, Editor of the "Gazette Salutaire," a Medical Newſpaper publiſhed Weekly at Bouillon.
Dr. Thouvenel, Phyſician at Montpellier.
Dr. Guerard, Phyſician at Duſſeldorp.
Dr. Goulin, Phyſician at Paris.
M. Willemet, Demonſtrator of Botany and Chemiſtry at the Royal College of Nancy.

PARIS.

The FACULTY of MEDICINE.

The Univerſity of Paris, which is one of the moſt ancient and celebrated ſeminaries of learning in Europe, is compoſed of four Faculties, viz. thoſe of Divinity, Civil Law, Medicine, and the Arts. No perſon is allowed to practiſe phyſic at Paris unleſs he be a Member of the Faculty of Medicine, Phyſicians to the Royal Family and the Princes of the Blood only excepted. The being admitted a Member of this Faculty, even after having taken a Doctor's degree in a French Univerſity, is attended with an expence of about two hundred pounds ſterling, and the Candidate muſt undergo a great variety of public examinations (upwards of ninety,) in the courſe of about two years and a half. The Members of the Faculty have the title of *Doctors Regent*. One of the Members is choſen annually with the title of *Doyen*, or *Dean*, who acts as Preſident, and five other Members are appointed every year to deliver lectures in Latin on Pathology, Phyſiology, Surgery, the Materia Medica, and Chemiſtry. The Faculty's Library is open every Thurſday in the afternoon.

A LIST of the DOCTORS REGENT*.

† Louis Claude Bourdelin, of Paris, M. D. Firſt Phyſician to Madame, Member of the Academy of Sciences, &c. Rue Mazarine.

* Thoſe marked † have paſſed the chair. In the liſt we procured from Paris we found the birth place of each Doctor annexed to his name, we have therefore adopted the ſame method, and have likewiſe given their places of reſidence.

John Joſeph Thery, of Arras, M. D.
Charles le Roy, of Paris, M. D. Rue de Bourbon.

The ROYAL SOCIETY of MEDICINE.

Inſtituted by the preſent King of France, in 1776. The Members of the Society are divided into three claſſes, of Fellows, Candidates, and Correſponding Members. Of theſe three claſſes, that of Correſponding Members only is unlimited as to number; the number of foreign Fellows is never to exceed ſixty. The views of this inſtitution extend to all the branches of Medicine, but more particularly to epidemical diſeaſes. The meetings of this Society are held every Tueſday afternoon, in the King's palace of the Louvre, where the Society has a numerous Medical Library, furniſhed at the expence of government. Such is the preſent flouriſhing ſtate of this reſpectable inſtitution, that at their laſt anniverſary meeting, on the 10th of October 1778, they were able to announce five Prize-ſubjects for the enſuing year. (See our article of Prize-Subjects.)

PRESIDENT.

Quarterly Surgeons, M. Clairac, M. Gaultier de Clambry,
M. Cuquel, M. Girard.

Physicians, &c. to the Countess d'Artois.

First Physician, Dr. Buffon, of the Faculty of Paris.
Physician in Ordinary, Dr. De Horne.
First Surgeon, M. Majault.
Surgeon in Ordinary, M. Guillermond.
Accoucheur, M. Levret.
Physician to Mesdames the King's Aunts, Dr. Maloet, of the Faculty of Paris.
Surgeon, Mr. Loftus.
First Physician to the Duke of Orleans, T. Tronchin, M. D. Member of the Academy of Berlin, and of the R. S. of London, and formerly Professor of Medicine at Geneva.
Physicians in Ordinary, Dr. de Torrés, Physician to the late King of Spain.
Dr. Fautrier, Dr. Herrenchwand,
Dr. Rebillé de Grand Maison, Dr. Duchemin,
Dr. de Horne.
First Surgeon, M. Marsolan.
First Apothecary, M. Clusel.

The ROYAL ACADEMY of SURGERY.

This Academy was founded in 1732. The present very elegant building was opened in 1775. Physiology, Anatomy, Surgery, Midwifery, and Surgical Pharmacy are taught here by different Professors, at the King's expence. The meetings of the Academy are weekly; it is composed of all the Master Surgeons of Paris, and of a certain number of Honorary and Foreign Members. Five volumes in 4to of the

the Memoirs of this Academy have been already publiſhed, and a ſixth is in ſome forwardneſs.

PRESIDENT.

M. de la Martiniere, Firſt Surgeon to the King.
Vice Preſident, M. Andouillé.
Director, M. Bordenave.
Vice Director, M. Dufouart.
Secretary, M. Louis.
Librarian. M. Dubertrand.

Le Jardin du Roi, *or the King's Garden.*

This Garden was founded in 1626, for the improvement of Botany, but ſince that time other Schools have been added of Chemiſtry and Anatomy. Anatomy and the operations of Surgery are taught here during the winter months, and Botany and Chemiſtry in the ſummer. All theſe courſes are at the King's expence. The King's Muſæum, which is ſituated at the entrance into the Garden, is open to the public every Tueſday and Thurſday.

Intendant of the Garden, The Count de Buffon.
Profeſſor of Botany, Dr. le Monnier.
Demonſtrator, *Vacant by the death of* Dr. Bernard de Juſſieu.
Profeſſors of Chemiſtry, Dr. Bourdelin.
Dr. Macquer.
Demonſtrator, M. Rouelle.
Profeſſor of Anatomy, Dr. Petit.
Demonſtrator, M. Mertrud.
Keeper and Demonſtrator of the Muſæum of Natural Hiſtory, Dr. d'Aubenton.

The HOTEL DIEU.

This is one of the largeſt and moſt crowded Hoſpitals in Europe, containing on an average upwards of three thouſand patients. There are ſeveral rows of beds in each ward, and it is uſual to ſee four and ſometimes ſix patients in each bed. The reader may judge of the inſalubrity of this Hoſpital when he is told that about one in five die of all that are admitted. All ſick and wounded perſons, venereal patients only excepted, are received here night and day, without any recommendation.

Phyſicians, Dr. Cochu, Dr. de Jean,
Dr. Belleteſte, Dr. Majault,
Dr. Doulcet, all Members of the Faculty.
Principal Surgeon, M. Moreau.

The CHARITY HOSPITAL.

The patients in this Hospital are disposed in separate beds, but the wards are neither so airy, nor so well ventilated as those of our London Hospitals, and all the bed-steads are of wood. The number of patients who die in this Hospital is in the proportion of one in eleven.

Physicians, Dr. Maloet,
Dr. Thierry de Bussy,
Dr. Dumangin, all of the Faculty of Paris.
Principal Surgeon, M. Sue, senior.

MONTPELLIER.

The University of Montpellier is one of the most ancient Schools of Physic in Europe, and is at present the most frequented in France. The Botanic Garden is neither very spacious, nor rich in plants. The Library, which is opened once a week for the use of the Students, affords only a very small collection of useful Medical books. The Professors lecture chiefly in French.

Professors of Medicine, J. F. Imbert, M. D. Chancellor, and Superintendant of the Botanic Garden.
Paul Joseph Barthez, M. D. Vice Chancellor.
Francis de la Mure, M. D.
Gaspard John René, M. D.
Anthony Gouan, M. D.
Francis Broussonet, M. D.
M. Vigaroux, M. D.
One chair vacant by the resignation of M. le Roy.
Demonstrator of Surgery, M. Goulard.
——— —— *Chymistry*, M. Joyeuse.

ITALY.

In Italy, after a Physician has finished his studies, he usually attends the practice of some established Physician in an Hospital, till an opportunity offers for him of settling in some town or village, which is called *Andare in Condotta*. As soon as he hears of a vacancy in any provincial place that will suit his circumstances, he applies, either personally or by letter, to the corporation, and produces the Certificates of his Studies, and his Diploma. There are usually several candidates on these occasions. When the place is once obtained, the Physician keeps it until he hears of a better, and then he offers himself a candidate for that. No patient fees the Physician of a *Condotta* for his attendance, his salary being paid by the corporation, and amounting, upon a medium, to a capitation of two shillings; so that the provincial Physicians get about thirty or forty pounds a year in the smallest Condotta, and seventy or eighty in the largest. Almost all the families of a Con-

Condotta, whether they have occaſion for their Phyſician or not, ſend him ſome little preſent at Eaſter and Chriſtmas; and the pooreſt peaſant (ſays Mr. Baretti, to whom we are chiefly indebted for this account) would be aſhamed not to ſend at leaſt a couple of fowls to his Phyſician on the holidays. If a village is too ſmall to ſupport a Phyſician, two or three others are joined with it, to form a Condotta; and their common Phyſician is enabled to keep a horſe, a mule, or a vehicle. If the place, on the contrary, is too large for one Phyſician, the corporation has more than one ſalary to appoint, and more than one Condotta to diſpoſe of.

All the Phyſicians, however, do not go in Condotta: many of them eſtabliſh themſelves in capital towns, and get conſiderable fortunes.—The young perſons who apply to Surgery, get through the world exactly in the ſame manner as the Phyſicians. As for Apothecaries, any body that chuſes it may ſet up for one, after having undergone the uſual examinations; but the Apothecaries are not permitted to preſcribe.

ROME.

Firſt Phyſician to the Pope,	Dr. Saliceti.
Firſt Surgeon	Signor Flaani.

College of the Sapienza.

Profeſſor of the Theory of Phyſic,	Dr. Tonci.
Therapeutics,	Dr. de Rotondis.
Profeſſors of the Practice of Phyſic,	Dr. Bonelli,
	Dr. Volpi.
Botany,	Dr. Miciari.
Anatomy and Surgery,	Dr. Micheli.
Chymiſtry,	Dr. Adinolphi.
Natural Philoſophy,	The Rev. Father Fundi.

NAPLES.

Firſt Phyſician to the King,	Dr. Biancardi.
Firſt Surgeon	Signor Mirra.
Phyſician to the Queen,	Dr. Serao.
Surgeon	Signor Pean.
Phyſician to the Hereditary Prince,	Dr. Vivenzio.

Univerſity of Naples.

Profeſſor of the Theory of Phyſic,	Dr. Piſciottano.
Anatomy,	Dr. Cotunnio.
Botany,	Dr. Cirillo.
Chymiſtry,	Dr. Gaetano de Robertis.
Practice of Phyſic,	Dr. Serao,
	Dr. Michael Angelo de Robertis.
Surgery,	Dr. Francillo.
Diſeaſes of the Nerves,	Dr. Baldini.

TUSCANY.

FLORENCE.

First Physician to the Grand Duke,	Dr. Hasenoherl de Laguſius.
First Surgeon	Signor Pechter.
Physician and Accoucheur to the Grand Duchess,	Dr. Vespa.

Professors of Medicine in the University of Pisa.

Of the Theory of Physic,	Dr. Calvi, Dr. Matani.

——*Surgery,*	Dr. Spagnolino.

SECTION IV.

A CATALOGUE OF MEDICAL BOOKS.

THE following Catalogue includes all the Medical Books publiſhed in this country in the year 1778; two or three only excepted, which were evidently written with no other view than to advertiſe the authors, or their noſtrums, and which we have therefore purpoſely omitted.

The limits of our plan will not allow us to give a copious account of any work; we ſhall, therefore, make particular mention only of ſuch as we judge to be the moſt deſerving of notice.

In regard to Foreign Books we candidly acknowledge, that our account of the greater part of them is taken from the Journale des Sçavans, the Journale de Medecine, and other periodical prints.—The difficulty of procuring books in this country from the diſtant parts of Europe, at all times great, has been greatly increaſed ſince the commencement of hoſtilities. We have thought it right to give all the titles we have been able to procure of new Foreign Books, in the courſe of the year. Many of theſe were publiſhed in 1777. Thoſe to which we have added no date, were publiſhed in 1778.

1. *Obſervations on the Introduction to the Plan of the Diſpenſary for General Inoculation. With remarks on a Pamphlet entitled,* "*An Examination of a Charge brought againſt Inoculation, by* De Haen, Raſt, Dimſdale, and other writers; by John Watkinſon, M. D." By the Hon. Baron Thomas Dimſdale, M. D. F. R. S. 8vo. Owen. 2 s.

Dr. Watkinſon, who it ſeems is Phyſician to the Diſpenſary in queſtion, undertook, in the pamphlet alluded to, to defend the plan of inoculating the poor of London at their own houſes on theſe grounds: that the inoculated ſmall-pox are in ſo ſmall a degree contagious, as ſcarcely to be capable of propagating the infection; that even the natural ſmall-pox, though in general much more contagious than the artificial, are not readily multiplied, unleſs forced by a miaſmatic conſtitution of the air; and that the increaſed number of deaths by the ſmall-pox, ſince the introduction of inoculation, is not to be imputed to this practice, as there appears from the bills of mortality to have been a gradual increaſe in this article, from a period much earlier than the practice of inoculation in England. Dr. W. even attempts to ſhew, in favour of the newly eſtabliſhed Diſpenſary, that the number of deaths from the ſmall-pox has actually decreaſed ſince its inſtitution.—To all theſe arguments Baron Dimſdale replies by contrary aſſertions. He contends that Dr. Watkinſon's extracts from the bills of mortality are unfairly ſtated; and he is of opinion, that as the ſmall-pox can never be produced without

actual contagion, it will of courſe be multiplied, in proportion as the opportunities of increaſing infection are increaſed.

2. *A Safe and Eaſy Remedy propoſed for the Relief of the Stone and Gravel, the Scurvy, Gout, Hectic Fevers with Conſumption, Putrid Fever, and Dyſentery; and for the Deſtruction of Worms in the Human Body, illuſtrated by Caſes: together with an extemporaneous Method of impregnating Water and other Liquids with Fixed Air.* By Nathaniel Hulme, M. D. Member of the Royal College of Phyſicians, London, and Phyſician to the Charter-Houſe, &c. 4to.

The remedy here recommended conſiſts of a ſolution of fifteen grains of ſalt of tartar in water, immediately after taking which, the patient is directed to ſwallow a draught of water, containing as much weak ſpirit of vitriol as may be ſufficient to neutralize the mixture, and thus generate fixed air in the ſtomach. Dr. Hulme, in an appendix to a former publication *, had recommended this medicine as a remedy for the ſtone, and given an account of a very ſingular caſe in which it had been uſeful. In the preſent work he confirms its efficacy by ſix other caſes.—In a caſe of genuine *ſea-ſcurvy* the Dr. tells us, the patient was perfectly cured by this method in the courſe of a fortnight. In two caſes of the gout it was productive of conſiderable relief. In the other diſeaſes mentioned in the title, we are told, that it has often been found ſucceſsful.

The extemporaneous method of impregnating water, and other liquids, with fixed air, given in the latter part of the work, is by ſimple mixture only, without the aſſiſtance of any particular apparatus. It conſiſts in the mixture of the two liquids mentioned in the beginning of this article; the ſolution of ſalt of tartar, and the acidulated water. Theſe, inſtead of being taken ſeparately, are to be *ſlowly* and *carefully* mixed with each other, ſo as to prevent as much as poſſible any effervescence. In this way the author aſſures us, that the mixture will imbibe a greater quantity of fixed air than will be found in an equal quantity of water impregnated with that fluid by means of the common glaſs apparatus.

3. *Obſervations and Experiments on the Power of the Mephitic Acid, in diſſolving Stones in the Bladder. In a Letter to* Dr. Percival. By William Saunders, M. D. Member of the Royal College of Phyſicians, and Phyſician to Guy's Hoſpital, &c. 8vo. 1s. Murray.

Theſe obſervations, which were firſt publiſhed in the third volume of Dr. Percival's Experimental Eſſays, tend to confirm the efficacy of the new ſolvent. The author is convinced, from a variety of trials, that water impregnated with this acid, is carried in circulation unchanged to the human bladder. In this pamphlet, the miſchief which ariſes from perſevering in the uſe of the lixivium, and the bad effects on the body, from the animal and putreſcent regimen, neceſſary for the preſervation of its powers, are fully pointed out; as well as the abſurdity in the belief of one univerſal ſolvent of human calculi, which in their component and elementary parts ſo eſſentially differ. The author obſerves, that a chemical inveſtigation of the urine of a calculous patient will beſt determine the nature of the ſtone, and direct to the uſe of the moſt proper ſolvent.

* Oratio de Re Medica," &c. 4to. 1777.

4. *Methods of Cure in ſome particular caſes of Inſanity.* By William Perfect. 8vo. 2s. 6d. Conant.

5. *An Account of the Epidemical Sore Throat, with the Method of Treatment, illuſtrated with Caſes and Obſervations.* By G. Leviſon, M. D. Phyſician to the Medical Aſylum. 8vo. 1s. 6d. White.

6. *Obſervations on the Sore Throat and Fever that raged in the North of Scotland in the year* 1777. *In a Letter to* Dr. William Grant. By Robert Saunders, M. D. Phyſician at Banff. 8vo. 1s. Murray.

We have here an account of a putrid angina, accompanied with a conſiderable degree of inflammatory diatheſis, which required a free uſe of the lancet. This and the uſe of emetic tartar in an infuſion of ſena, exhibited in ſuch a doſe, as to operate both as an emetic and a purgative, were employed with great ſucceſs. When a contrary method was adopted, the diſeaſe generally proved fatal.

7. *A Candid Examination of what has been advanced on the Colic of Poitou, and Devonſhire, with Remarks on the moſt probable, and Experiments intended to aſcertain the true Cauſes of the Gout.* By James Hardy, M. D. 8vo. 3s. 6d. Cadell, 1778.

In the laſt volume of the Medical Obſervations and Inquiries, Dr. Fothergill obſerved that veſſels of *glazed* earthen ware are dangerous repoſitories for acid liquors; and quoted a caſe in point, which had been related to him by a perſon of veracity in Cornwall, where ſeveral perſons had been attacked with the colica Pictonum, in conſequence of drinking cyder out of a glazed earthen pitcher. Dr. Fothergill's opinion is confirmed in the preſent work by the experiments and obſervations of Dr. Hardy. The author informs us, that common glazed earthen jugs are the uſual drinking veſſels of the lower claſs of people throughout the county of Devon, and that in the glazing of theſe veſſels, the quantity of lead ore employed is nearly in the proportion of one ounce to every quart in meaſure. He relates many experiments, proving the ſolubility of the lead in theſe veſſels, both by cyder and other acid liquors. Theſe trials were made with a preparation of orpiment and quick-lime, deſcribed by Dr. de Haen, as a proper teſt of the exiſtence of lead in any liquid. The Devonſhire colic prevails chiefly among the lower claſs of people in that county; the author accounts for this by obſerving, that perſons of ſuperior rank in life are not only ſtrangers to the uſe of theſe glazed jugs, but likewiſe drink a more generous kind of cyder.

8. *Experiments, ſhewing that Volatile Alkali Fluor is the moſt efficacious Remedy in the Cures of Aſphyxies,* &c. *Tranſlated from the French of* M. Sage. By Thomas Brand, Surgeon. 8vo. 1s. Bew.

The medicine here recommended is the volatile alkali diſengaged from ſal ammoniac by three parts of ſlaked lime, and named fluor, from its being always in a fluid form. Several caſes are related to confirm its efficacy in the circumſtances for which it is adviſed, by being applied in ſmall quantity to the noſtrils, ſome drops of it mixed with water being likewiſe introduced by the mouth. M. Sage likewiſe recommends this remedy in burns, and in the bites of ſome animals and inſects, as well as in apoplexy. Its effects in all theſe caſes he aſcribes to its neutralizing an acid acrimony. In our liſt of Foreign Books, the reader will find a work by M. Bucquet, in which this theory is oppoſed.

9. Gulielmi Hudſoni, *Reg. Soc. S. et Pharmacop. Lond.* Flora Anglica, *exhibens Plantas per Regnum Britanniæ ſponte creſcentes*, &c. *Editio altera, emendata et acta.* 2 vols. 8vo. 10s. 6d. Nourſe.

With the firſt edition of this work, publiſhed in 1762, in one vol. 8vo. our botanical readers are without doubt well acquainted. It may perhaps be conſidered as a ſufficient proof of the utility of the work to obſerve, that the firſt impreſſion being ſoon entirely ſold off, the copies gradually roſe from the original price of 7s. 6d. to the extraordinary one of three guineas. In the courſe of ſixteen years the ingenious author's own obſervations, and the communications of his friends, have enabled him to improve and add conſiderably to his catalogue. So that the preſent enlarged edition may, in many reſpects, be conſidered as a new work.

10. *The Deſcription of the Hot Bath, at Bath, together with Plans, Elevations, and Sections of the ſame. The Deſigns of* John Wood, *Architect.* Folio, 5s. Dodſley.

11. *Conſiderations on the Nature, Quality, and Diſtinctions of Coal and Culm.* By James Hutton, M. D. 8vo. 1s. Richardſon and Urquhart.

12. *Remarks on Conſiderations on the Nature, &c. of Coal and Culm.* 8vo. 1s. Bew.

13. *Anatomical Dialogues; or a Breviary of Anatomy, wherein all the Parts of the Human Body are conciſely and accurately deſcribed, and their Uſes explained. Chiefly compiled for the Uſe of the young Gentlemen in the Navy or Army.* Small 8vo. 3s. Robinſon.

14. *A Manual of Chymiſtry; or a brief Account of the Operations of Chemiſtry, and their Products. Tranſlated from the French of* M. Beaumé. 12mo. 4s. Johnſon.

The public is indebted for the tranſlation of this uſeful Manual to the ingenious Mr. Aikin of Warrington, who appears to have undertaken it at the requeſt of the ſtudents at the Warrington Academy, who attend his chemical lectures. The work is conſiderably improved in its Engliſh dreſs by the addition of Mr. Aikin's notes.

15. *An Attempt to reſtore the primitive natural Conſtitution of Mankind.* By W. Renwick, Surgeon. 8vo. 1s. Bladon.

16. *Hiſtorical and Practical Enquiries on the Section of the Symphyſis of the Pubes, as a Subſtitute for the Cæſarean Operation, performed at Paris, by* M. Sigault, M. D. *Oct. 2. 1777. By* M. Alphonſe le Roy, M. D. *Tranſlated from the French by* Lewis Poignand, *Surgeon.* 8vo. 1s. 6d. Baldwin.

About the year 1768 M. Louis, of the French Academy of Surgery, wrote to his friend Profeſſor Camper, then at Groningen, that a new operation had been propoſed to the Academy in caſes of narrow pelvis, by dividing the ſymphyſis pubis, in preference to the Cæſarean operation. The Academy conſidered this as an extraordinary project, rather than as a practicable operation; but Dr. Camper was of a different opinion. He began by trying the experiment on a female cadaver, in which he found, that without any material injury to the parts, he could conſiderably enlarge the pelvis. He obſerved, that it would be required to ſeparate only one of the crura clitoridis, and that the other might be eaſily ſtretched. In order to determine from analogy, how far ſuch an operation would be dangerous to life, he performed

performed the section on a living pig, and the animal for some days was unable either to stand or walk. In the space of a few weeks, however, it seemed to be perfectly recovered, and at the end of three months was fattened and killed. Dr. Camper preserves the bones in his museum. The ingenious Professor made some attempts to procure a trial of this method on a young woman condemned to death at Groningen; but not being able to succeed in his request, published the letters that passed on the occasion, together with many arguments * to prove the practicability of the operation, and the preference it seems on many accounts to claim over the Cæsarean section, the almost certain fatality of which is well known. It seems that the person alluded to, though not named by M. Louis in his letter to Dr. Camper, was Dr. Sigault, a physician and accoucheur at Paris, who last year performed the operation in question, in conjunction with Dr. A. le Roy, the author of these enquiries. We are told that the patient (Mrs. Souchot, a soldier's wife) was a deformed woman, of a small stature, and with a narrow pelvis, not exceeding two inches and a half in diameter from the pubis to the sacrum. The operation was performed with a common bistoury, and the moment the operation was completed, the pubes parted, as if the string of a bow had been divided, and receded to each side under the integuments. The space procured by the section measured *two inches and a half*, and a living child was extracted without any considerable difficulty. During this operation, which was neither very painful nor tedious, the patient lost very little blood. On the 3d of December 1777, the poor woman was so well recovered, as to be able to present herself to the members of the Faculty, assembled in their hall. She carried her young son in her arms, and walked alone up a stair-case of about twenty steps, to the room where the Doctors were sitting. The infant was put on the table, and received by all the Gentlemen present, as a child whose birth made him precious to the Faculty. On the 6th of December, the Faculty being again assembled, it was resolved that a medal should be struck, on the exergue of which the date should appear of the discovery made by Doctor Sigault, on the 1st of December 1768, and that of the operation performed by him, October 31, 1777.

After all, however, neither the advantages, nor the practicability of this new method seem as yet to be satisfactorily ascertained; and notwithstanding the decree of the Faculty of Paris in its favour, there are many of the most eminent, judicious, and discreet practitioners in that city who have declared against it. Several brochures have appeared on both sides of the question, and a very sensible and humane Surgeon at Paris, wrote word to the writer of this Catalogue, some time after the Faculty had passed their decree, '*Souchot's wife is still living, but is in a most deplorable situation.*'

17. *A Physical Journal, kept on board his Majesty's Ship the Rainbow, during three Voyages to Africa and the East-Indies, in the Years* 1772, 1773, *and* 1774: *to which is prefixed a particular Account of the Remitting Fever, which happened on board of his Majesty's Sloop Weasel on that Coast in* 1769,

* In a work entitled, "*Epistola ad* Davidem Van Gescher Celebrem inter Amstelædamenses Chirurgum, Academiæ Scientiarum Hollandiæ et Zelandiæ Socium, &c. *De Emolumentis Sectionis Synchondroseos Ossium Pubis in partu difficili, qua salva matris, et fœtus vita, caput prave incuneatum, tuto expediri, et Sectio Cæsarea, vel unius evitari posset.* 8vo. Groningen 1771.

by

by Robert Robertſon, *Surgeon of his Majeſty's Navy.* 4to. 12s. ſewed. Dilly.

This uſeful work is divided into four parts. The firſt of theſe contains an account of the remitting fever which happened on board the Weaſel. In the ſecond part we have a meteorological diary of the weather on board the Rainbow; the third contains a monthly review of the ſick liſt, after the manner adopted by Huxham, in his *Obſervationes de Aere et Morbis Epidemicis*; and in the fourth we have a more particular account of the fever and dyſentery.

18. *A Radical and Expeditious Cure for a recent Catarrhous Cough. Preceded by ſome Obſervations on Reſpiration; with occaſional and practical Remarks on ſome other Diſeaſes of the Lungs. To which is add'd a Chapter on the Vis Vitæ, ſo far as it is concerned in preſerving and reinſtating the Health of an Animal. Accompanied by ſome Strictures on Compound Fractures. By* John Mudge, F. R. S. *Surgeon at Plymouth.* 8vo. 3s. Walter.

This work abounds with intereſting practical remarks, which do honour to the candour and ingenuity of the author. His remedy for a recent catarrhous cough conſiſts in the uſe of opium, and the inhaling warm ſteams into the lungs. For adminiſtering the latter of theſe the author recommends the uſe of the *inhaler* *, an inſtrument of which he has given a deſcription, illuſtrated by an engraving. This inſtrument which is of pewter, and contains about a pint, has a cover, to the middle of which is fixed a flexible tube of leather, with a mouth-piece of ivory; and underneath the cover is a valve. The handle of this inſtrument is hollow, and by a hole at the bottom, and three others at the top, communicates both with the external air and with the inſide of the inhaler. The body of the inſtrument, or pot, being three parts filled with hot water, the patient is to apply the tube to his mouth, and in the act of inſpiration the external air will paſs through the handle of the inſtrument, and through the hot water before it reaches the lungs; in expiration it will paſs out at the valve under the cover. In this manner the whole proceſs of reſpiration may be performed, without removing the tube from the mouth.

In the evening, a little before bed-time, Mr. Mudge recommends it to the patient, if of adult age, to take three drams of Elixir Paregoricum in a glaſs of water; if the ſubject is younger, for inſtance, under five years old, one dram, or within that and ten years, two. The patient is then to go to bed, and, after being covered up warm, is to uſe the inhaler for the ſpace of twenty or thirty minutes. The uſe of warm thin whey is adviſed at the ſame time, to promote perſpiration; becauſe, although ſweating is by no means eſſentially neceſſary to the cure of the catarrhous cough, yet, when the diſorder is attended with a feveriſh habit, it will generally be found uſeful. After this reſpiratory proceſs is over the patient uſually paſſes the night free from cough. If the attack has been violent, or the diſorder has been neglected, it will be right to repeat the ſame proceſs in the morning, and very often (as we ourſelves have alſo experienced,) it will be neceſſary to continue the uſe of the inhaler and the opiate for ſeveral ſucceſſive nights.

In the early ſtage of phthiſis pulmonalis, before the lungs have been greatly injured by the number of tubercles, or thoſe not having advanced to ſuppuration, are attended with a dry, huſky cough, Mr. Mudge obſerves,

* The Inhalers are to be purchaſed of W. Barnes, pewterer, No 157, Fleet-ſtreet.

that

that next to occaſional bleedings, temperance, and cooling medicines, perhaps the greateſt benefit will be found to ariſe from ſcapulary iſſues, aſſiſted by a vegetable diet, and aſſes milk. The good effects of a diſcharge of this ſort he formerly experienced to a very remarkable degree in his own perſon. The drain in theſe caſes he thinks ought to be conſiderable. In his own caſe the iſſue opened between his ſhoulders was made by a cauſtic of between two and three inches in diameter, and was afterwards capable of containing forty or fifty peas. In caſes of dry, huſky cough, he has not found a more efficacious medicine than gum. ammoniac. ʒß. made into pills, with eighteen or twenty drops of laudanum, and taken at bed time, and occaſionally repeated. This excellent remedy, which was communicated to him by Sir John Pringle, ſeldom fails, we are told, to produce an expectoration. He has likewiſe ſeen good effects from the common remedy of ʒß. or ʒij. of balſ. ſulph. aniſat. taken twice a day, and has known a ſalutary revulſion brought on by a large plaſter of pix Burgund. between the ſhoulders. In a caſe of phthiſis, Mr. Mudge once ſaw a cure effected by the patient's ſitting twice a day, for a fortnight, in a room filled with the vapour of the common reſin, by now and then ſprinkling a little of it upon a hot iron. He inſtances the great influence of the change of air in diſorders of the lungs, by the whooping cough, in which ſeveral ſucceſſive changes are neceſſary, and almoſt always complete the cure. Thus, after the patient has been ill about a month (for he will receive but little benefit till the diſorder is at its height) the advantage of the firſt change of air is almoſt always perceived; but after a few days the diſorder will be as it were at a ſtand, unleſs the patient be removed into a different ſituation, and if this is done every four or five days, a ſpeedy iſſue is generally put to the diſeaſe In ſpitting of blood the author recommends ʒß. of nitre, twice or thrice a day in water. In a caſe of confirmed catalepſy, Mr. Mudge has ſeen ſingular good effects from half an ounce of valerian in ſubſtance, given twice a day, till the patient has taken ſeven pounds.

For many other ingenious and uſeful obſervations we muſt refer our readers to the work itſelf.

19. *Medical Caſes ſelected from the Public Diſpenſary at Edinburgh; with Remarks and Obſervations; being the Subſtance of Caſe Lectures, delivered during the Years* 1776, 1777. *By* Andrew Duncan, M. D. Fellow of the Royal College of Phyſicians, Lecturer on the Theory and Practice of Medicine, and one of the Phyſicians to the Public Diſpenſary at Edinburgh *. 8vo. Murray.

The author of this work is already well known to the Medical world by his other ingenious publications; and in the volume before us there is ſo much evident utility, that we wiſh to ſee the work continued. The following are ſome of the moſt intereſting articles contained in it. A caſe of epilepſy cured by the uſe of the cuprum ammoniacum.—The hiſtory of a petechial Eruption, without febrile ſymptoms, a diſeaſe which had before occurred to Dr. Graaf, and been deſcribed by him in a Theſis, *De Petechiis ſine Febre*, publiſhed lately at Gottingen; an account of a caſe of venereal gonorrhœa in which the author brings many ingenious arguments to prove that gonorrhœa and Syphylis are not, as has been generally ſuppoſed, merely different modifications of the ſame diſeaſe, but two different affections.—A caſe of the tenia, which, with an additional caſe by Dr. Duncan, has been publiſhed by Dr.

* Prefixed to the work is an engraving of the author by Bell.

Simmons

Simmons, in an appendix to his treatise on that subject.—A cancerous affection of the breast cured by electricity.—Convulsions treated with the pil. ceruleæ.—Menorrhagia cured by the Peruvian bark.—Observations on an obstinate cutaneous affection of the leprous kind, treated with the vitriolic acid in large doses; a remedy much used in Germany as a cure for the itch.—At the end of the volume we find an Oration *de Laudibus Gulielmi Harvei*, pronounced at the Medical Academy in April 1778, on the anniversary of Harvey's birth-day.

20. *The Medical and Philosophical Commentaries.* By a Society in Edinburgh. 8vo. 5 vols. 1l. 10s. 6d. in boards. Murray.

This useful collection, which is due chiefly to the zeal and industry of Dr. Duncan, consists annually of four numbers, one of which is published quarterly. Five volumes are now completed. Each number is divided into three parts. The first part gives an analysis of medical books. The second contains original cases and observations, and the third is set apart for medical news. We shall confine ourselves to the second part, and give the titles and some account of all the original papers in the fifth volume, as having been published in the course of the last year, viz.

1. *The History of a Case, in which the Arm of a Child was torn off by a Mill, without any succeeding Hemorrhage. By* Mr. James Carmichael, Surgeon at Port-Glasgow.

The patient, a girl three years and a half old, was entangled by the spindle of a barley mill, going at its full career *, and twisted round it with equal velocity. The left arm was torn off an inch and a half above the elbow, and all the soft parts were mangled and torn. Mr. C. saw her an hour after the accident, she was then losing no blood, but was to all appearance dying. The remainder of the humerus was then immediately taken off at the joint. The child gradually recovered, and in two months the cure was completed.

2. *An Account of the Effects of Electricity in removing a fixed Contraction of the Fingers. By* Dr. Alexander Eason of the 18th Regiment of Dragoons.

This contraction, which was the result of a broken arm, and which had resisted the Bath waters, we are told was removed in an instant, about ten months after the accident, by a single electrical shock; the bottle being pretty highly loaded.

3. *The History of a Convulsive Disorder, treated by the Use of the Flowers of Zinc. By* Patrick Dugud Leslie, M. D. *at Durham.*

A case very accurately related, and which, though it terminated fatally, clearly proves the salutary effects of this remedy in convulsive diseases.

4. *Two Cases of the Poisonous Effects of the Thorn Apple.* By Thomas Fowler, M. D. &c.

One of these patients, a girl six years of age, swallowed three-fourth parts of the seeds of a fresh, ripe, middle-sized, thorn-apple, the datura stramonium of Linnæus. About an hour afterwards she began to look stupid; and during the whole of the following night was in a maniacal state. The next day, when Dr. Fowler first saw her, her pulse was at 100, she was then a little recovered, but still incoherent and stupid. A brisk purgative

* On an accurate calculation Mr. Carmichael found the spindle fly round an hundred and forty times in a minute.

soon

ſoon removed the ſymptoms. The other patient, a girl aged nine years, ſwallowed only about one-fourth part, or half a dram of the ſeeds, and was affected neither with idiotiſm, nor mania.

5. *Miſcellaneous Practical Obſervations. By* Thomas Percival, M. D. F. R. S. &c.

This paper contains an account of the efficacy of the flowers of zinc in five caſes of ſpaſmodic cough.—Obſervations on the uſe of fixed air in caſes of ſtone and gravel, and in mortification —In joining opiates with purgatives in caſes of violent colic, Dr. Percival adviſes a ſtrong decoction of poppy heads, with twenty, thirty, or forty drops of zinc. Theb. to be injected into the inteſtines, and repeated till the pain is relieved, and the vomiting ceaſes. A doſe of calomel and jalop, or any other briſk cathartic, is then adminiſtered, and quickened by the uſe of ſena tea, or a ſolution of the neutral ſalts.—A caſe of hydrocephalus internus, in which Dr. Percival deſcribes the good effects of mercury, exhibited ſo as to excite a ſlight ſalivation. The caſe terminated fatally, but the author is of opinion that the ſymptoms were mitigated by the uſe of this remedy.

6. *The Hiſtory of a Diſcharge of Blood to a great Extent by Tapping. By* Samuel Athill, M. D.

The patient died, and upon diſſection the diſorder appeared to originate from a diſeaſed liver.

7. *A Caſe in which obſtinate Affections of the Inteſtines were radically cured by the Diſcharge of a great Number of Subſtances reſembling Hydatides, from the Uſe of Purgatives. By* William Scott, M. D. of Hawick.

A young man, between twenty-five and thirty years of age, after having been long troubled with pains in his bowels, nauſea and faintneſs, which returned frequently, and were always relieved by glyſters and anodyne juleps, at length, after having taken the elixir aloes in the uſual doſe for twenty days, began to void by ſtool a great number of hydatides. The diſcharge continued at times for ſeven or eight days, after which he recovered his appetite and ſtrength.

8. *The Hiſtory of a Fractured Sternum. By* Mr. George Borthwick, Surgeon to the 14th Regiment of Dragoons.

9. *An Account of an aſtoniſhing Recovery after a Wound through the Lungs. By* Mr. Richard Pew, Surgeon at Wellingborough.

10. *Obſervations on the Extirpation of a Cancerous Ulcer in the lower Lip. By* Mr. William Deaſe, Surgeon at Dublin.

Tending to prove the preference which a ſingle point of the interrupted ſuture, ſupported by ſlips of ſticking-plaſter and the uniting bandage, deſerves over the twiſted ſuture, after the removal of cancerous ulcers, or exceſcences on the lips.

11. *A Caſe of obſtinate Obſtipatis depending on a Stricture of the Rectum. By* Mr. Edward Johnſtone, Student at Edinburgh.

This obſtruction, which terminated fatally, was found on diſſection to have been occaſioned by a kind of morbid ligament formed in the rectum, which as completely cloſed the paſſage as if it had been tied by a packthread. The patient had taken three pounds of argent. viv. ten days before her death, yet none of it had deſcended to the part affected.

12. *A Caſe*

12. *A Case of an uncommon Presentation of a Child, to whose Neck there was attached a Tumour nearly about the Size of the Child's Head.* *By* Mr. John Gardner, Surgeon at Betley, Staffordshire.

13. *On the internal Use of Vitriolum Album, in a Case of Epilepsy, and in Diarhœa.* *By* Mr. James Johnson, Surgeon at Lancaster.

In the epileptic patient this medicine was continued from April till October, and the dose of it gradually increased from five grains to twelve. The patient has had no return of the fits for the space of twelve months. Mr. Johnson has seen it useful in some slighter cases. In diarrhœa he has seen it succeed after ipecacoanha and other remedies had been ineffectual.

14. *The History of a Case in which the Bones of a Fœtus were discharged by Stool, and from which the Patient afterwards recovered.* *By* Mr. John Smith, Surgeon at Uppingham.

15. *Some Remarks on the Treatment of Hydrocephalus Internus, suggested by a Perusal of* Dr. Percival's *Paper on that Subject, in the* 18*th Number of the Medical Commentaries. In two Letters to* Dr. Duncan, *from* Samuel Foart Simmons, M. D.

Dr. Simmons seems to think that the good effects ascribed by Dr. Percival to the use of mercury, were due rather to the other remedies employed by that physician, and particularly to the blisters which were so liberally applied, and so uniformly productive of relief. Dr. Simmons supports this opinion by a review of Dr. Percival's paper, and by other practical observations. He observes that blisters, freely applied, and particularly to the head, will be of great use, by promoting absorption and obviating spasm; and that this latter indication will be more fully answered by a prudent use of opium. The occasional use of a laxative clyster, and the avoiding every thing that may disturb or reduce the patient, are likewise recommended by him, as being no immaterial part of the method of treatment, and far preferable to the diuretics and purgatives which have been hitherto adopted.

16. *Observations on the Hepatitis.* *By* Dr. John Clarke, *Physician at* Newcastle.

Against inflammation of the liver, resisting the usual treatment, Dr. Clarke has exhibited calomel with the greatest success. During this mercurial course, he gives an opiate at bed-time, to procure rest.

17. *An Account of a large Quantity of Blood evacuated by Stool.* *By* Dr. W. Scott, Physician at Hawick.

18. *An Account of the Dissection of an extraordinary Tumor arising from the fifth and sixth Ribs.* *By* Mr. Samuel Gillam Mills, *Surgeon at* Greenwich.

21. *Mineralogia Cornubiensis; a Treatise on Minerals, Mines, and Mining: Containing the Theory and Natural History of Strata, Fissures, and Lodes; with the Methods of discovering and working of Tin, Copper, and Lead Mines, and of cleansing and metallizing their Products; shewing each particular Process for dressing, assaying, and smelting of Ores. To which is added, an Explanation of the Terms and Idioms of Miners.* *By* William Pryce, Surgeon at Redruth in Cornwall. Folio. 1l. 11s. 6d. Philips.

Although the confined limits of our Catalogue will not allow us to enter into the plan of this very important work, yet we cannot pass it by unnoticed. Independent of the gratification which this volume must afford to the lovers

lovers of chymiſtry, it muſt be conſidered as a work of great national utility. We are happy in being enabled to inform the public, that the ingenious author is preparing a ſecond edition for the preſs, to which many improvements, and a greater number of plates, will be added.

22. *An Experimental Syſtem of Metallurgy.* *By* J. H. Hampe, M. D. Folio. 18s. *Boards.* Nourſe.

23. *The Reformation of Law, Phyſic, and Divinity; with Arguments to prove, that their Spirit ſhould be the Baſis of our ſocial Contracts.* *By* Daniel Mageniſe, M. D. 8vo. 1s. 6d. Bew.

24. *Strictures on the preſent Practice of Phyſic.* 8vo. 2s. 6d. Bew.

25. *An Eſſay on the evil Conſequences attending injudicious Bleeding in Pregnancy.* *By* George Wallis, M. D. 8vo. 1s. 6d. Bell.

26. *An Account of the Tenia, and Method of treating it.* *By* Samuel Foart Simmons, M. D. &c. 8vo. 2s. 6d. Second Edition, with Three Copper-plates. Wilkie.

Dr Simmons, in his Preface to this work, gives the natural hiſtory of the Tenia, and an account of the different methods that have been employed to deſtroy it. He then deſcribes the method employed againſt this formidable enemy by Madame Nouffer, who has long been famous for her ſucceſs in this way, and who has lately ſold her remedy to the king of France. Its efficacy was aſcertained by ſeveral of the moſt eminent phyſicians at Paris, and their account of it was publiſhed at the king's expence. The ſpecific, which deſtroys the worm, conſiſts ſolely of two or three drams of the male fern, in powder, taken in the morning early; after which the patient is to ſwallow a draſtic purge. The mode of exhibiting theſe medicines, together with the precautions neceſſary to be attended to for the ſucceſs of the proceſs, are very fully deſcribed in the pamphlet. The virtues of fern root, in caſes of tenia, though mentioned by almoſt all the ancient phyſicians, have long, however, been totally neglected. It is with pleaſure we are informed, that this remedy has been ſucceſsfully adopted in this country. In this ſecond edition, Dr. Simmons, beſides a caſe which happened under his own care, has added, in an Appendix, two very intereſting letters on the ſubjects. One of theſe is from Dr. Blackburne of Durham, and contains an account of four caſes, in all of which it operated a cure. One of theſe four patients had been ſubject to a variety of diſtreſſing ſymptoms, for more than five-and-twenty years, which were evidently occaſioned by the tenia. The other letter is from Dr. Duncan of Edinburgh, and proves the efficacy of the method in two other caſes.

27. *Obſervations on ſome of the Articles of Diet and Regimen uſually recommended to Valetudinarians.* *By* William Falconer, M. D. F. R. S. 8vo. 1s. Dilly.

This little work contains many important remarks. Dr. Falconer cenſures the ſubſtitution of brandy or rum and water for drink, inſtead of malt liquors. He likewiſe objects to a ſtrict prohibition from vegetable food, bread, butter, and ſugar, as being frequently pernicious, when long continued.

28. *A Practical Treatise on the Diseases of the Teeth; intended as a Supplement to the Natural History of those Parts.* By John Hunter, F. R. S. Surgeon Extraordinary to the King. 4to. 5s. Johnson.

There are no quotations in this book, no authors cited; the work is truly original, and discovers that superior degree of physiological abilities, which is so evident in all the writings of this ingenious surgeon.

Rottenness of the teeth, which seems to be such a decay as would appear to deserve the name of mortification, appears to the author not to be the effect of external or accidental causes, but a disease originating in the tooth itself. It affects the fore teeth of the lower jaw less than any of the others, and seems to be peculiar to youth and middle age; teeth seldom beginning to rot after the age of fifty.—Inflammation of the teeth, he observes, seldom takes place till the cavity is exposed. The prevention of this disease will consist in preventing the further decay of the tooth. If the decay be not too far advanced, Mr. Hunter recommends extracting the tooth, boiling it, with a view to destroy its life, and then replacing it in the socket. This practice, however, he advises only in the grinders. The decay of the teeth by denudation, which is less common than, and very different from, the former, he likewise considers as an original disease of the tooth itself, and not depending on accident, way of life, or any particular management of the teeth. It usually begins close to the arch of the gum, and the first appearance is a want of the enamel; after which the bony substance likewise gives way, and becomes brown, appearing as if it had been filed, and afterwards polished. The swelling of the fang, which probably arises from inflammation, appears to resemble the spina ventosa in other bones: the only cure is extraction, but its symptoms are difficult to distinguish.—In drawing the teeth, Mr. Hunter advises the operation to be deferred till the inflammation has subsided, and the extraction to be performed *slowly*; a caution most necessary in adults.—Dividing the gum from the tooth, before it is drawn, or the common method of closing the gum afterwards, he considers as of no use.—*Transplanting the teeth*, he observes, is one of the nicest operations, and requires more surgical and physiological knowlege, than any that comes under the care of the dentist. He thinks it hardly possible to transplant the grinders, as the chance of fitting the sockets of them is very small.—If the tooth to be removed be not wholly diseased, the socket is probably sound, and not begun to be filled up; and therefore there will be a good chance of succeeding. Both the gums and the sockets must be perfectly sound; and no transplantation, he observes, ought to take place, when the patient takes, or has lately taken, mercury. Mr. Hunter has even known it fail, from mercury being taken six weeks afterwards.—The *scion tooth*, or the tooth to be transplanted, must be full grown; young, because the principle of life and union is strongest in such; smaller than the tooth removed, and therefore best taken from a woman, because female teeth are generally smaller than those of men; and the operation has often failed, from the tooth being forced in too tight.—When a sound tooth is drawn by mistake, the author recommends it to be replaced. There are instances of transplanted teeth becoming diseased, in the same manner as an original living tooth; which puts it beyond a doubt, that in these cases the vessels of the body communicate with the scion tooth. Mr. Hunter took a sound tooth from a person's head, then made a deep wound in a cock's comb, pressed the fang of the tooth into the wound, and fastened it there with threads. Some months after, the cock was killed, and its head minutely injected; when the vessels of the tooth were

were found to be injected likewise, the external surface of the tooth being every where adherent to the comb.—In *Dentition*, Mr. Hunter recommends cutting the gum down to the teeth, as the only method of cure. He has done this ten times upon the same teeth, where the disease had recurred so often, and every time with the absolute removal of the symptoms. The common fleam is the best instrument for this purpose, because a fine-pointed lancet will be apt to break off against the tooth. There is no need of any great delicacy in the operation, the gums being insensible.

These are only a few observations, selected from a multitude of others, equally interesting, for which we must refer the reader to the work itself.

29. *Philosophical Transactions of the Royal Society of London.* Vol. LXVII. Part II. 4to. 10s. 6d. Davis.

In this, and our future accounts of the Philosophical Transactions, we shall give the titles of all the Medical articles they contain. In the volume before us, we meet with the following.

xxv. *The Case of Ann Davenport. By* Mr. F. B. Fynney, *Surgeon at* Leek *in* Staffordshire.

The patient had been in a bad state of health, and subject to frequent and excruciating fits of colic, from the age of five, to twenty-one years when Mr. Fynney first saw her. About a year before this, she had perceived a painful swelling just above her right groin, which gave her inexpressible uneasiness, as if something stabbed her in that part, whenever she attempted to stretch out her thigh. An abscess formed here, and much pus was discharged; the integuments of the abdomen put on a gangrenous appearance, but, by a judicious treatment, the mortification was soon put to a stand. The discharge of matter continued to be excessive, and not long after another abscess appeared somewhat lower down. In this was felt a hard substance, which was making its way to the integuments, from the appendix vermiformis of the cæcum, which probably, by former inflammations, had adhered to the peritonæum. The extraction of this substance was followed by portions of excrement, and some dark brown particles, which were found to be filings of iron, which the patient had formerly taken. The nucleus of this hard substance proved to be the smaller end of that part of a silk engine called a *star*, at which machine the patient had been employed before she was five years of age, and which, from her symptoms, and her remembering nothing of swallowing it, must have been at least sixteen years lodged in the *appendix cæci*.

At the time Mr. Fynney dates his account, which was six months after the extraction, all the wounds were healed, except one, the discharge of excrement through which was sensibly diminished, and the patient's health was greatly improved.

An engraving of the substance is given in the Transactions.

xxvi. *Description of the Jesuits Bark Tree of Jamaica and the Caribbees. By* William Wright, M. D. &c. *Surgeon General in Jamaica.*

This species of bark grows on stony lands, near the sea-shore, and rises only to twenty feet It is the *Cinchona Caribæa* of Linnæus, and by the natives is called the *sea-side beech*. Dr. Wright has found it efficacious as a tonic and antiseptic. The Royal Society have given an engraving of the plant.

xxviii. *Description and Use of the Cabbage Bark Tree of Jamaica. By* the same.

Mr. P. Duguid gave an account of the virtues of this bark as an anthelmintic, in the Edin. Essays, Phys. and Lit. vol. II. but Dr. Wright seems to be the first who has given a botanical description of it, which is illustrated by a most elegant engraving. On account of its resemblance to the *Geoffræa Spinosa* of Linnæus, it is named *Geoffræa Jamacienſis inermis.* This bark purges briskly, thirty or forty grains working as well as jalap by stool; but in this way it does not seem to kill worms so well as by decoction. It is to be exhibited with caution; fatal accidents having happened from an imprudent use of this medicine. Upon the whole, it appears to be a valuable remedy. The writers of the Edinburgh Comm. take notice, that the decoction always excites vomiting; but Dr. Wright, who has never observed this effect, imputes it to their receiving it in a mouldy state.

xxxi. *A Short Account of Dr. Maty's Illness, and of the Appearances in the dead Body, which was examined on the 3d of July, 1776, the Day after his Decease. By* Dr. Hunter, *and* Mr. Henry Watson, F. F. R. S.

Dr. Maty, about two weeks before his death, was taken with a violent oppressive pain, just above the pit of the stomach, which made him feel as if he was very near dying. He was bled, and gradually recovered, but so imperfectly, that any motion of his body, or any pressure upon the part, instantly brought back the oppressive pain. For seven or eight years, he had had a great many purging stools every day, and an almost incessant cough in the night-time. Three years before his death, he had a fistula in ano, for which he was cut, and thereby cured of that disorder. The only remedy that had palliated his complaints, was opium. Upon dissection, the principal morbid appearance was found to be in a part of the colon, an inch and a half of which was hard and ulcerated. The rectum was likewise much contracted. Mr. Watson conjectures, that a little bit of bone, some sharp or hard body, in passing had injured the gut so much, as to lay a foundation for all the succeeding complaints; and observes, that the ulcerated intestine is a disease slow in its progress, but generally fatal.

30. *A Letter to Sir* Robert Barker, Knt. F. R. S. *and* George Stackpoole, Esq. *on General Inoculation. By* John Coakley Lettsom, M. D. F. R. S. *&c.* 4to. 6d. Dilly.

This pamphlet is written in vindication of general inoculation. Dr. Lettsom advances many ingenious practical arguments in proof of its utility, and endeavours to obviate the objections that have been brought against it.

31. *An Enquiry into the Merit of the Operations used in obstinate Suppressions of Urine. By* Alexander Reid, of Chelsea, Surgeon. 8vo. 1s. Wilkie.

This pamphlet, which is written with great candour, is intended to vindicate a method of evacuating the urine, in obstinate suppressions, by means of a puncture with a trochar, through the rectum into the bladder. This operation was first recommended by Mr. Fluraut, a Surgeon at Lyons, in M. Pouteau's *Melanges de Chirurgie.* Mr. Reid asserts its superiority over the puncture *in perinæo*, and gives a letter he lately received from Mr. Fluraut on the subject, and which contains a farther account of its success.

32. *A Treatise*

32. *A Treatise on the Theory and Management of Ulcers, with a Dissertation on White Swellings of the Joints; to which is prefixed, an Essay on the Chirurgical Treatment of Inflammation, and its Consequences* By Benjamin Bell, Member of the College of Surgeons of Edinburgh, and One of the Surgeons to the Royal Infirmary of that City. 8vo. 5s. Boards. Edin.

This is a very ingenious and useful performance. In the treatment of inflammation, Mr. Bell prefers a solution of saccharum Saturni, in water, to Goulard's extractum Saturni, because we can be more certain of its strength. He agrees with Sir John Pringle and Mr. Gaber, as to the formation of pus. The opening of large abscesses he advises to be done by means of a seton; in this way the pus being evacuated slowly, and without exposing the internal surface of the sore to the external air. In cases of tinea capitis, he thinks the most effectual external application is a solution of corrosive sublimate, in the proportion of ten grains to a pint of water. In cutaneous ulcerations of the herpetic kind, he has seen excellent effects from axunge and calcined zinc, applied in the form of ointment. He is clearly of opinion, that white swellings of the joints proceed from two different causes; one of these he supposes to be from an inflammatory or rheumatic diathesis, and to be frequently curable; the other he supposes to be connected with a scrophulous habit, and to be in general incurable. Mr. Bell's observations on this subject are many of them new, and all of them important.

33. *Thesaurus Medicus; sive Disputationum in Academia Edinensi, ad Rem Medicam pertinentium, a Collegio instituto ad hoc usque Tempus delectus. A* Gulielmo Smellie, Soc. Phil. Edin. Socio *habitus.* 2 Vols. 8vo. 12s. Murray.

Each of these two volumes contains twenty theses; and the second volume brings the selection down to 1758.

34. *Cases and Observations on the Hydrophobia; by* J. Vaughan, M. D. *To which is annexed, an Account of the Cæsarean Section; with Reflections on dividing the Symphysis of the Ossa Pubis.* 2d Edit. 8vo. 3s. 6d. Cadell.

The three melancholy cases described in this work, are related with great accuracy and candour. They prove, as well as Dr. Fothergill's observations on the hydrophobia, how erroneous the generality of medical writings have hitherto been on this subject, and how little reliance is to be placed on any of the remedies that have been at any time proposed in this disease. Dr. Vaughan is clearly of opinion, that the hydrophobia is a spasmodic, and not an inflammatory disease. He finds, that a considerable difficulty in swallowing is not, as has been generally supposed, joined to the *aquæ pavor* in these cases. The principal foundation of the evil seems to rest upon a morbid sensibility both of the external and internal fauces; but when once any substance, whether solid or fluid, is conveyed into the oesophagus, it readily passes into the stomach. In the contemplation of so dreadful a disease, there is some comfort derived from knowing that the hydrophobia is by no means the inevitable consequence of being bit by a mad animal; the chance appearing to be in favour of the person's not feeling any bad effect from the bite, although no means, by way of prevention, are employed. Thus we are told, that of between twenty and thirty persons, who were bit by the dog which gave the fatal wound to the poor boy, the subject of the third case, not one felt the least ill effect but himself; and this seems frequently to have been the case. In the above number were some who took the Ormskirk medicine; others went to the salt water; and a part of them made use of no remedy; yet these fared equally well with the most attentive to

their injury. As a prophylactic, the author recommends the actual cautery, or, in preference, a dilatation of the wound by gunpowder.

The diſtance of time from the bite to the appearance of the hydrophobia is different and uncertain. In the firſt and third of Dr. Vaughan's caſes it was a month; in Dr. Fothergill's patient it was three months; in Dr. Dickſon's it was four months *; and in Dr. Vaughan's ſecond caſe it was nine months.

Dr. Vaughan has deſcribed the Cæſarean ſection, as it was performed in the Leiceſter Infirmary. The patient, who was forty years of age, had been the mother of five children, all of which ſhe had brought into the world without any other circumſtances, than the ordinary ones attendant on labour. Since her laſt child, a great deformity of the ſpine had taken place, and, as appeared afterwards, of the bones of the pelvis alſo; ſo that its diameter, from the pubis to the ſacrum, was only an inch and a half. The child extracted by the operation proved to be a healthy, full-grown child, and has been ſince baptized under the name of Julius Cæſar; but the mother died on the fourth day after the ſection, a conſequence which, as the author obſerves, may very generally be expected to follow ſuch a wound of the uterus, with its unavoidable expoſure to the air.

Dr. Hunter's reflections on the ſection of the ſymphyſis pubis, which are added to this ſecond edition of Dr. Vaughan's work, are of the higheſt importance. The merits of the propoſed operation † are diſcuſſed with the greateſt candour. He thinks it ought to be received with diffidence and caution; and he very humanely points out the dangerous, and dreadful effects, which muſt naturally be expected to reſult from a too indiſcriminate uſe of this operation, and which its advocates have too ſlightly conſidered. Dr. Hunter finds, that in the dead body, when the ſymphyſis pubis is completely divided, the oſſa pubis ſeparate ſo little a way, that ſome force is neceſſary to produce an interval of half an inch; and that upon increaſing the force, till the ſpace of interval comes to two inches and a half, there is a continued craſh, from the tearing of the ligamentous fibres at the ſides of the ſacrum. He is therefore clearly of opinion, that as the room gained by ſlitting the ſymphyſis of the oſſa pubis will not, in many caſes, allow the child's head to paſs, it conſequently can, or at leaſt ought, never to be adopted as a ſubſtitute for the Cæſarean ſection. Dr. Hunter ſatisfactorily proves this fact, by a view of three different pelves of ſubjects on whom the Cæſarian operation was performed; in none of which the allowance of two inches and a half (the ſpace gained by the ſeparation of the pubis) would give the ſpace which the French authors themſelves require for the paſſage of a living child. Upon the whole, Dr. Hunter is of opinion, that the new operation may perhaps, in a few rare caſes, be adopted, not for ſaving the child, but the mother; as the life of an infant ought not to be put in competition with the mother's happineſs and ſafety: and theſe caſes he thinks are thoſe, in which the narrowneſs of the pelvis does not admit the application of the crotchet, but where the room gained by the ſeparation of the oſſa pubis might be ſufficient to bring the child within reach of this inſtrument. Yet even upon that ſuppoſition, were it to be admitted into practice without conſultation and formality, there is great reaſon to fear that (like the crotchet itſelf, perhaps, and even the forceps) it would do more harm than good. It might render a ſhocking operation very frequent, to the great terror of mankind, though the caſes that could really call for it would be extremely few. "In midwifery," adds the Dr. "all inſtruments, and eſpecially ſuch

* Med. Obſ. and Inq. vol. III. † See page 216.

"as

" as cut or tear either the mother or child, ſhould be ſuſpected by the pub-
" lic; to keep ignorant, and inexperienced, and adventurous practitioners
" upon their guard; and to inforce great caution, and conſultation, in ſuch
" delicate and dangerous ſituations of human nature."

35. *The Hiſtory of the Origin of Medicine: An Oration delivered at the Anniverſary Meeting of the* MEDICAL SOCIETY *of* LONDON, *January* 19, 1778, *and printed at their Requeſt. To which are ſince added, various Hiſtorical Illuſtrations. By* John Coakley Lettſom, M. D. Member of the Royal College of Phyſicians, and Fellow of the Royal and Antiquary Societies in London. 4to. 5s. Dilly.

This diſcourſe is intended by the learned writer only as a ſpecimen of a larger work, which is to include the hiſtory of medicine, and of the arts and ſciences that are the moſt intimately connected with it, from the earlieſt ages down to the preſent time. To enter into a detail of the plan the author has adopted in this work, would be to exceed the limits we find it neceſſary to obſerve in our own. We cannot help expreſſing our ſatisfaction, however, at the great variety of curious and uſeful information we find interſperſed through the work, and our wiſhes that the ingenious writer may have leiſure and perſeverance enough to bring it to a concluſion.

FOREIGN BOOKS.

34. *Trattato delle Aque Minerali.* A Treatiſe on Mineral Waters, by Nicholas Andria, M. D. Profeſſor of Natural Hiſtory in the Univerſity of Naples. 8vo. Naples, 1777.

This work is divided into two parts, in one of which the author treats of Mineral Waters in general, and in the other gives the analyſis of a great many Mineral Springs, and particularly of thoſe in Italy. The hot baths of Aqui have been famous it ſeems ever ſince the time of Pliny.

35. *Detail de la nouvelle Direction du Bureau des Nourrices à* Paris, *&c. Par* M. J. J. Gardane, M. D. 12mo. Paris. 1777.

36. *Apologia per Medici Paveſi ſopra con la Giuſtificazione di una Conſulta d'una Atrofia Nervoſa.* 4to. Pavia. 1777.

A juſtification of the conduct of the author (Doctor Monti, of Pavia,) in a conſultation with another Phyſician at Milan.

37. *Traité des Maladies Veneriennes, traduit du Latin, de* M. Aſtruc. 4 tom. 12mo. Paris. 1777.

This new edition of M. Aſtruc's Treatiſe on the Venereal Diſeaſe, is due to the celebrated M. Louis, of the Academy of Surgery, who has enriched it with many additional notes and obſervations.

38. *Memoires ſur les Sepultures dans les Villes, ou Recueil de Pieces concernant les Cimetieres de la Ville de* Verſailles. 8vo. Verſailles, 1777.

39. *Avis du College des Medecins de* Lyon *ſur l'Etabliſſement des Cimetieres hors de la Ville.* 8vo. Lyon, 1777.

The number of deaths in the city of Lyons amounts every year, on an average, to four thouſand. And a plan having been lately propoſed for forming a burying-place without the city, the Doctors Petetin, Raſt, and Villermoz were requeſted by the College of Phyſicians to direct their thoughts

to this ſubject. The reſult of their deliberation is this pamphlet, in which it is propoſed to make the graves eight or ten feet deep, and ſeven in breadth. Dr. Petetin, one of the Committee, has likewiſe publiſhed a ſeparate pamphlet on the occaſion, entitled, "*Obſervations ſur l'Etabliſſement d'une Ci-*" *metiere generale hors de la Ville de* Lyon." This ſubject, which is certainly of great importance, has excited the attention of government in France, and ſeveral other countries.

40. *Journal d'un Voyage qui contient differentes Obſervations Mineralogiques particulierement ſur les Agates et ſur les Baſaltes, avec un Detail ſur la Maniere de travailler les Agates. Par* M. Collini, Secretaire de S. A. S. L'Electeur Palatin. 8vo. Manheim, 1777.

41. *Inſtructions ſur la Maniere de deſinfecter les Cuirs des Beſtiaux Morts de l'Epizootie et de les rendre propres a être travaillés dans les Tanneries ſans y porter de Contagion. Par* M. Felix Vicq D'Azyr, M. D. Secretaire Perpetuel de la Société Royale de Medecine, &c. 4to. Paris.

42. *Delectus Diſſertationum Medicarum Argentoratenſium: collegit et edidit* Philippus Ludovicus Wittwer, M. D. vol. I. 8vo. Nurenberg, 1777.

This firſt volume contains the following diſſertations:

1. Jacob Reinbold Spielmann, *de Principio Salino.*
2. Bernh. Henric Rang, *de optimo Infantis recens nati Alimento.*
3. Johan. Fred. Ignat. Probſt, *de Sale Volatili Cantharidum.*
4. J. Keſſelmaier, *de quorundam Vegetabilium principio Nutriente.*
5. Phil. Jac. Imlin, *de Soda et inde obtinendo peculiari Sale.*
6. J. Frederic. Ehrmann. *de Hydrargyri preparatorum internorum in Sanguinem Effectibus.*
7. Joh. Hermann, *Cardamomi Hiſtoria et Vindiciæ.*
8. Johan. Michael. Roederer, *Experimenta circa natura Bilis.*

43. *De Animalium ex Mephitibus & noxiis Halitibus interitu ejuſque propioribus Cauſis, Libri tres, Auct.* Baſſiano Carminato. 4to. Lodi.

44. *Lettres de* M. Alexandre Volta, *ſur l' Air inflammable des Marais. Traduites de* l'Italien. 8vo. Straſburgh.

Theſe letters were originally publiſhed by Profeſſor Volta at Milan, in 1776, under the title of "*Lettera al* P. Carlo Giuſeppe Campi *full' Aria inflammabile nativa delle Paludi.*"

45. *Recherches et Conſiderations ſur la Population de la* France. *Par* M. Moheau. 8vo. Paris.

46. *Obſervations ſur les Epizooties contagieuſes, particulierement ſur celle qui a Regnée en* Champagne. *Par* M. le Chevalier Grignon. 8vo. Paris.

The epidemical diſtemper here deſcribed appears to have been in a high degree contagious. It prevailed in Burgundy in 1775. The ſmell produced by the infected cattle proved fatal to ſeveral perſons who attended them.

47. *Thermæ Varadienſes Examini Phyſico et Med. Subjectæ. Item de illarum Uſu ſalutari, ſimul cum Obſerv. Med. nec non de Sale Medio in iis contento; cujus Occaſione Diſſertatio inſeritur de Natura Salium, nominatim vero de Salibus qui circa Debrecinum colliguntur, Nitro noſtri Temporis et Veterum S. Natro, i. e. Alcalino Foſſili, vel ſaponario Debrecinenſi per* Steph. Hathvany, M. D. 8vo. Viennæ, 1777.

48. *De*

48. *De Salubritate et Morbis* Hungariæ *Schediasma. Auctore* Frederic. Jac. Fuker. *Med. Hung.* 8vo. Lipsiæ.

49. Jos. Mingoni, Patavini *Profess. Historia Medica Thermarum* Patavinarum, *s. Observationum Medico-practicarum circa Morbos iisdem Thermis Tractatos; Centuria prima.* 4to. Padua, 1777.

50. *Saggio e Memoria de la Cura preservativa de l'Idrofobia eseguita in dieci Persone offese da Cane rabioso da* Ignatio Lotti, *Protomedico della Provincia de l'Istria.* 4to. Venice.

The prophylaxis adopted in these ten cases consisted solely in the use of Mercury, employed so as to excite a gentle salivation. But it does not appear that either of the ten patients were actually infected; and it is a melancholy truth, that in the treatment of the rabies canina, Mercury and all the other boasted remedies have hitherto been ineffectual.

51. *Storia della Squinancia Cancrenosa epidemica e contagiosa, dal* Giovanni Brugnone, *Direttore della Scuola Veterinaria.* 8vo. Torino, 1777.

This epidemical sore throat prevailed among the horses in some parts of Savoy. The strongest horses were the first affected, and the disease was so rapid in its progress that few of the horses lived more than thirty hours after the attack. Some were carried off in twelve, and even in nine hours; and yet the seat of the disease in the throat was so imperceptible, that no one suspected the real nature of the complaint till it was ascertained by dissection.

52. *Dictionaire historique de la Medecine ancienne et moderne, ou Memoires disposés en Ordre Alphabetique, pour servir a l'Histoire de cette Science, et a celle des Medecins, des Anatomistes, Botanistes, Chirurgiens, et Chymistes de toutes les Nations. Par* M. N. F. I. Eloy, M. D. Medecin Ordinaire de S. A. R. le Prince Charles de Lorraine. 4to. 4 tomes, Mons.

53. *La Theorie du Chirurgien; ou l'Anatomie en generale et particulier du Corps humain, avec des Observations Chirurgiques sur chaque Partie. Par* M. Durand, 2 vols. 8vo. Paris.

Chiefly copied from Winslow and Palfyn.

54. *Della Origine e dei Progressi nell' Arte Obstetricia, Prolusione recitata de* Sebastiano Rizzo, Padoano, *poblico Professore d'Obstetricia.* 4to. Venice, 1777.

In this account of the origin and Progress of Midwifery the author confines himself chiefly to those Venetian Physicians who have distinguished themselves by their labours in this way. Amongst these we meet with the names of J. Dominio Santorini, and of his son Peter Santorini; Sebastian Melli; the author's predecessor, J. Manini; and Paitoni, the present Archiater at Venice.

55. Wenceslai Trnka de Kr'zowitz, *Sanct. Roman. Imp. Equitis, Commentarius de Tetano, plusquam ducentis cl. Medicorum Observationibus, nec non omnibus hactenus cognitis adversus Tetanum Remediis instructus.* 8vo. Viennæ, 1777.

56. *Notice des Hommes les plus celebres de la Faculté de Medecine en l'Université de* Paris, *depuis* 1110 *jusqu'en* 1750 *inclusivement, extraite en plus grande Partie du Manuscrit de feu* M. Thomas Bernard Bertrand, *communiqué par*

M. ſon Fils; *redigée par* M. Jacques Albert Hazon, *Docteur Regent de la Faculté, &c. avec des Remarques etendües.* 4to. Paris.

Dr. Hazon, who is already known by his "*Eloge Hiſtorique de l'Univerſité de* Paris," has divided the preſent work into three parts. The firſt of theſe includes the moſt eminent Phyſicians of the Faculty of Paris from the beginning of the eleventh to the end of the fifteenth century; the ſecond comprehends thoſe of the ſixteenth and ſeventeenth centuries, and the third brings the work down to the year 1750. The author ſpeaks of Arnaldus de Villanova, or Arnaud de Villeneuve, as the moſt celebrated within the firſt period. This Phyſician, who flouriſhed in the thirteenth century, is ſaid to have diſcovered the diſtillation of wine into brandy. In the ſecond part we meet with the names of Fernelius and Duretus. The former of theſe we are told gained every year by his practice twelve thouſand livres, a ſum which, allowing for the increaſed value of money, would be nearly equivalent at preſent to 1800l. Catherine de Medicis, every time ſhe laid-in, preſented him with ten thouſand gold crowns. Dr. Hazon relates of Duretus, that when he married his daughter to Arnaud de L'Iſle, Profeſſor of Arabic, ſhe walked to church between Henry III. king of France on her right hand, and her father on her left. The king was alſo preſent at the wedding feaſt, and made the bride a preſent of all the gold and ſilver plate uſed on the occaſion. In the third part we have memoirs of Tournefort, Lemery, Geoffroi, Winſlow, Aſtruc, and other eminent Phyſicians of the preſent century; and as a proof of the munificence of Louis XIV. to his Phyſicians and Surgeons, we are told, that after the operation of his fiſtula in 1687, he gave Dr. D'Acquin, his firſt Phyſician, 100,000 livres, to Dr. Fagon 80,000 livres, and to Mr. Felix, his firſt Surgeon, who performed the operation, 150,000 livres.

57. *Memoire ſur la Manière dont les Animaux ſont affectés par differens Fluides Aeriformes Mephitiques, et ſur les Moyens de remedier aux Effets de ces Fluides. Par* M. J. Baptiſte Michael Bucquet, M. D. 8vo. Paris.

Mr. Sage, in a book which has been tranſlated into Engliſh by Mr. Brand, maintains that Mephitic Vapours, being naturally acid, muſt neceſſarily be reſtrained by Alkalis, and on this ground recommends Volatile Alkali, as the moſt efficacious remedy in Aſphyxes. M. Bucquet, on the contrary, denies this theory, and aſſerts that Acids are, in ſuch caſes, more efficacious than Alkalis. The author has prefixed to his work an hiſtorical account of the different Fluids paſſing under the name of Fixed Air, or *Gas*.

58. *Sopra la Qualità dagli Effluvi de Baco de Seta. Diſcorſo di* Antonio Pimbiolo, *degli Engelſandi, nobile* Paduano, *Profeſſore di* Pavia. 4to. Padua, 1777.

The effluvia of ſilk-worms has been found to occaſion pernicious effects. Profeſſor Pimbiolo has obſerved that the perſons who manage them are ſubject to diſeaſes of the lungs, and phthiſis. He therefore objects to this buſineſs being carried on in populous villages, and recommends the building theſe manufactories in airy ſituations.

59. *Memoire ſur le Phlogiſtique, conſideré comme la Cauſe du Developpement de la Vie, et de la Deſtruction de tous les etres dans les trois Regnes. Par* M. Senebier, 8vo. Geneve.

60. *Ver-*

60. *Verhandeling over het Electrizeen, &c.* A Treatiſe on Electricity; with the Deſcription of a new invented Machine, and ſome new Experiments. By M. Van Marum, M. D. 8vo. Groningen.

69. *Diſſertations ſur l'Organe de l'Ouie de l'Homme, des Reptiles, et des Poiſſons. Par* M. Etienne Louis Geoffroy, *Docteur Regent de la Faculté de Medecine de Paris.* 8vo. Paris.

70. *Contrepoiſons de l'Arſenic, du Sublimé Corroſif, du Verd du Gris et du Plomb. Par* M. Navier, M. D. *Correſpondant de l'Academie Royale des Sciences.* 12mo. 2 tomes. Paris.

71. *Memoires de l'Academie Royale des Sciences et Belles Lettres de Berlin, pour l'Annee* 1775. 4to. Berlin, 1778.

The Medical Papers contained in this volume are as follows, viz.

Some Account of the Salt of Canal. By Dr. Cothenius, *Counſellor of State, Phyſician to the King*, &c.

This ſalt has been diſcovered on the ſurface of the earth, in the neighbourhood of Canal, a village ten leagues from Turin. Meſſrs. Aloy, father and ſon, Apothecaries at Canal, extracted this ſalt by means of a lixivium, and found that a pound of earth yielded three ounces. This ſalt appears to be

be compoſed of the vitriolic acid and an alkaline earth. Dr. Cothenius recommends it as a mild purgative.

The Hiſtory of an extraordinary Diſeaſe. *By* the ſame.

The patient, who was a woman, died at the age of thirty-five, after experiencing a variety of diſtreſſing ſymptoms from the age of fourteen. During her life-time ſeventy-one needles were diſcharged from her, ſome by ſtool, and others from different parts of her body. After her death upwards of ſixty needles more were found diſperſed through the different viſcera. Dr. Cothenius obſerves, that in the Stockholm Memoirs there is an account of a young lady who ſwallowed thirty-two needles, and afterwards recovered. He endeavours to account for the exiſtence of the needles in the preſent caſe, but does not do it ſatisfactorily. It ſeems probable that the patient, who perſiſted in denying that ſhe had ever ſwallowed needles, ſwallowed them when very young *. It is obſervable that her complaint at firſt was a ſpaſmodic colic.

An Account of a Woman who carried a Fœtus in the Abdomen during the Space of twenty two Years. *By* M. Walter, Profeſſor of Anatomy at Berlin, &c.

This caſe is illuſtrated with four engravings. The ſubject, who on account of her ſmall ſtature had formerly been dwarf to the Empreſs Ann, at St. Peterſburgh, died in the hoſpital at Berlin in 1774. She had thought herſelf pregnant ſo early as 1752, and at the end of the uſual term of pregnancy, had experienced violent pains in the region of the abdomen, but after this recovered. Upon diſſection this woman was found to be well formed, and in the lower part of the cavity of the abdomen was diſcovered a fœtus, hard, and ſeemingly petrified, and which had neither placenta nor umbilical cord.

Meteorological Obſervations made at Berlin in 1775. By M. Beguelin.

Chemical Experiments on the Stone in the Bladder. *By* M. Margraaf.

An Account of the Magnetic Cures performed at Vienna. *By* Baron Van Swieten.

Our readers have probably ſeen ſome accounts in the newſpapers of cures performed at Munich, Vienna, and other places in Germany, by means of the Magnet. The perſon who thus impoſes on the credulity of the public is a Dr. Meſmer. Baron Van Swieten, who communicated this paper, is ſon to the late famous Phyſician of that name, and was lately at the Court of Berlin, in quality of Reſident from the Imperial Court.

This volume likewiſe contains the Eulogy of Dr. Meckel, a late celebrated Profeſſor of Anatomy at Berlin.

72. *Memoires de l' Academie Imperiale des Sciences et des Belles Lettres à Bruxelles.* Vol. I. 4to.

The papers in this volume relate chiefly to the natural hiſtory, agriculture, manufactures, &c. of the Low Countries. At the head of this new inſtitution is Mr. Tuberville Needham, and one of its moſt active and ingenious members is Father Mann, a native of England, and who for many years was Superior of the Carthuſian Convent at Nieuport. The only Medical papers we find in this volume, are an account of the Mineral Waters

* See the caſe of Ann Davenport, in the Phil. Tranſ. mentioned in a former part of this Catalogue.

of

of Sauchoir, by the Abbé Vitri, and a paper by Dr. Beunie, Phyſician at Antwerp, the ſubject of which is the diſorder ſometimes occaſioned by the eating of muſcles. Dr. Beunie aſcribes it to a little ſea inſect, a kind of Stella Marina, which ſometimes lodges itſelf in the muſcle, and whoſe ſpawn is ſo cauſtic, that even when applied outwardly to the ſkin, it produces itching and ſwellings that are in a high degree painful. The remedy preſcribed in theſe caſes by Dr. Beunie is vinegar; and he recommends abſtinence from theſe ſhell-fiſh during May, June, July, and Auguſt.

73. *Acta Societatis Medicæ Havnienſis.* 8vo. Havniæ.

74. T. C. Cuntera *de Viribus Medicis Nicotianæ, ejuſque Uſu et Abuſu.* 8vo. Viennæ.

75. *De Morbis Venereis Larvatis, a* J. S. Hauſmann. 4to. Gottingen.

76. *De Cautelis circa Remediorum præcipue Evacuantium Uſum in Morbis finientibus vel ſub initio Morborum, a* F. Retmeyer. 4to. Gotting.

77. *Epitomen Operum Omnium,* Ant. de Haen, *per* J. M. Schoſulan. 8vo. Viennæ.

78. Nic. Joſ. Jacquin, M. D. et Prof. Vindib. &c. *Miſcellanea Auſtriaca ad Botanicam, Chemiam, et Hiſtoriam Naturalem ſpectantia cum Figuris partim collatis.* Vol. I. 4to. Viennæ.

79. *Synchondroſeos Oſſium Pubis Sectionem in Partu difficili inſtituendam.* A. Loder. 4to. Gotting.

80. *Obſervationes Medicæ de Febribus Putridis, de Peſte, nonnulliſque aliis Morbis.* 8vo. Viennæ.

81. *Diſſertatio de duobus Conſtitutionibus epidemicis Dalmaticis.* 8vo. Viennæ.

82. *Controverſæ Queſtiones Phyſiologicæ quæ Vires Cordis et Motum Sanguinis per Vaſa animalia concernunt.* A. —— Prochaſka. M. D. Viennæ. 8vo.

83. —— Prochaſka, M. D. *De Carne Muſculari Tractatus Anatomico-Phyſiologicus, Tabulis Æneis illuſtratus.* 8vo. ibid.

84. *Diſſertatio Medica de Aſa Fœtida, a* —— Pundt. M. D. 4to. Gotting.

85. *Succincta Medicorum Hungariæ et Tranſylvaniæ Biographia.* 8vo. Viennæ.

86. Wriſbergius *de Vena Azyga duplici, aliiſque hujus Venæ Varietatibus.* 8vo. Gotting.

87. ——— *Obſervationes Anatom. de quinto Pare Nervorum Encephali.* 4to. Gotting.

88. *Eſſais botaniques, chemiques et pharmaceutiques ſur quelques Plantes indigenes, ſubſtituées avec Succés a des Vegetaux exotiques. Par* M. Coſte, *Medecin des Hopitaux du Roi a Calais, et Aſſocié honoraire du College Royale des Medecins de* Nancy, *et* M. Willemet, *Doyen des Apoticaires,* &c. a Nancy. 8vo. Nancy.

This uſeful work obtained the prize of the Academy of Sciences at Lyons. The reader will find a particular account of it in the 19th Number of the Medical Commentaries.

89. *Bibliotheca Medicinæ practicæ. Auctore* Alberto de Haller. 2 tom. 4to. Bernæ.

It is to be regretted that the learned author did not live to complete this useful work. The second volume brings it down only to the year 1694.

90. *Elementa Physiologiæ Corporis humani. Auct.* Alb. de Haller. Editio altera, 8 tom. 8vo. Bernæ.

91. *Eloge* de M. Albert de Haller, *avec un Catalogue de ses Ouvrages.* 8vo. Geneva.

The author of this is said to be M. Senebier.

92. *Elogium* Alberti de Haller, *Auctore.* G. E. Baldingero. 4to. Gottingæ.

93. *Elogium* Alberti de Haller, *Auctore* C. G. Heyne. 4to. Ibid.

Other panegyrics, in honour of this celebrated man, have likewise been published by M. Tscherner, and others; and we are told that Dr. Zimmerman, of Hanover, who was the learned Baron's friend and relation, is collecting materials for a history of his life and writings.

94. Hermanni Boerhaavii *Epistolæ ad* Johannem Baptistam Bassand, *Medicum Cæsareum.* 8vo. Viennæ.

95. *Observations sur les Maladies Epidemiques, &c. Ouvrage traduit de l'Anglois du Docteur* Sims, *par* M. Jaubert. 8vo. Avignon.

96. *Discours sur la meilleure Methode de poursuivre les Recherches en Medecine; prononcé devant la Société Medicale de Londres, á son Assemblée annuelle le Mardi,* 18 *Janvier,* 1774, *et publié a sa demande. Par* M. James Sims, M D. *et Membre de la Société Medicale. Traduit de l'Anglois, par* M. Jaubert, Medecin. 8vo. Avignon.

97. *Dissertatio Medica circa tres Quæstiones ab Academia Divonienſi propositas, scilicet:* 1mo. *Quibus in Morbis activa Medicina.* 2do. *In quibus expectativa præferenda?* 3tio. *Quibusnam Signis cognoscat Medicus an agendum ei sit, vel expectatorem gerere se debeat, donec Opportunum collocandis Remediis Tempus occurrerit? Quæ judici ejusdem Academiæ proximé accessit ad præmium, anno* 1776. *Auctore,* Nicolao Antonio Jaubert, Medico. 8vo. Avenione.

SECTION V.

MEDICAL PRIZES.

The ROYAL SOCIETY of MEDICINE at Paris, at their public meeting, October 20, 1778, announced the following subjects for prizes, to be distributed in 1779, 1780, and 1781.

I. "WHAT is the best method of treatment in the case of hydrophobia?" The dissertations on this subject must be delivered in before the 1st of January, 1781, and the prize, which is of twelve hundred livres, or fifty pounds sterling, will be adjudged on the first Tuesday in Lent, 1781.

II.

II. " To determine, *firſt*, by *chemical analyſis*, what is the nature of anti-
" ſcorbutic remedies, properly ſo called. *Secondly*, by *obſervation*, what
" ought to be their uſe and combinations in the different kinds and compli-
" cations, and in the different degrees of ſcurvy." This prize, which is of ſix hundred livres, will be adjudged on the 31ſt of Auguſt, 1780.

III. " To determine whether there is truly a miliary fever which is to be
" conſidered as an idiopathic diſeaſe, and diſtinct from the other exanthe-
" mata; and in what order it is to be claſſed." This prize, which is of three hundred livres, is given by Dr. Le Becq de la Cloture, one of the Fellows of the Society, and will be adjudged in October, 1779. The diſſertations muſt be delivered in before the 1ſt of June.

IV. " To determine, by a number of accurate experiments and obſerva-
" tions, whether contagious diſeaſes, and particularly the ſmall-pox, are
" capable of being ſpread by means of the air." The diſſertations on this ſubject muſt be delivered in before the 1ſt of January; and the prize, which is of three hundred livres, given by Dr. Raſte, of Lyons, a Fellow of the Society, will be adjudged the firſt Tueſday in Lent, 1780.

V. " To aſcertain the beſt method of curing ſpeedily, and with cer-
" tainty, the itch, contracted by communication, as happens in barracks,
" hoſpitals, priſons, &c."

VI. " To aſcertain the moſt ſpeedy, leaſt expenſive, and at the ſame
" time the moſt certain method of curing the virulent gonorrhea, and to
" prevent the accidents which uſually follow it." Theſe two laſt prizes are of three hundred livres each, and are given by the Marquis de Crenolles, a Fellow of the Society. The diſſertations are to be delivered in before the 1ſt of June, 1779.

All the diſſertations are to be ſent, poſt paid, to M. Vicq D'Azyr, Secretary to the Royal Society at Paris; and the reſpective authors are requeſted to ſend a ſealed letter, containing their names, and the motto they have prefixed to their work; which ſealed letter will be returned (if required) unopened to each unſucceſsful candidate.

The Faculty of Medicine at Paris, at their anniverſary meeting, Nov. 5, 1778, announced the following ſubject for a prize medal, which will be diſtributed in November, 1779.

" To aſcertain the phyſical, moral, and political advantages reſulting
" from mothers ſuckling their children."

SECTION VI.

A LIST of DEATHS.

1777,
December 12, AT Berne, the truly learned and illuſtrious Baron ALBERT VON HALLER, Knight of the Polar Star, Member of the Senate of Berne, Preſident of the Royal Society of Gottingen, and of the Oeconomical Society of Berne; Honorary

Honorary Fellow of the College of Phyſicians at Edinburgh, and Member of moſt of the Academies and Literary Societies in Europe. He was born at Berne, October 16, 1708, and ſtudied firſt at Baſil, and afterwards at Leyden, where he took the degree of Doctor of Phyſic in 1726. The following year he viſited England. From London he went to Paris, and in 1730 returned to Switzerland; which he quitted again in 1736, when he accepted a Profeſſorſhip in the Univerſity of Gottingen. The diſtinguiſhed manner in which he taught Anatomy, Phyſiology, and Botany in that Univerſity, drew to him a great number of hearers from all parts of Europe. In 1753, the ill ſtate of his health induced him to return to Berne, where he remained till his death, employed in ſeveral of the moſt important offices of the ſtate, and immortalizing himſelf by his works.

Baron Haller had three wives; to the memory of the two firſt he has paid a tribute in his poems; the third ſurvives him. He had eight children, four ſons and four daughters. The eldeſt of his ſons, Baron Emanuel Von Haller, has diſtinguiſhed himſelf by his hiſtorical and botanical writings, and is at preſent a member of the ſenate of Berne.

The genius of this great man was univerſal, and he cultivated it with unremitting induſtry. He was endued with an extreme degree of penetration, and a moſt retentive memory. He was deeply verſed in the mathematics, a taſte for which he imbibed under the celebrated Bernouilli. He was critically verſed in all the dead, and in moſt of the living languages, many of which, eſpecially the French, Engliſh, and Italian, were as familiar to him as the German. His poems, which are chiefly on philoſophical ſubjects, are alone ſufficient to hand down his name to the lateſt poſterity; but the medical reader, who has ſtudied the works of this celebrated writer, cannot avoid dwelling more particularly on his abilities in Medicine, Botany, Surgery, Anatomy, and Phyſiology; in all of which branches, and eſpecially the two latter, the works of Haller will be read and admired, as long as a taſte for medical learning continues to be cultivated. In ſhort, the talents of this great man were ſo various and ſo profound, that the learned Michaelis, in one of the volumes of the Gottingen Tranſactions, has very properly applied to him, what Plutarch ſays of Ariſtotle, "*Neque coelo, neque* "*terra, neque mari quicquam relinquere voluit incognitum, in-*"*dole præterea mirabili ut ad ſingula natum præcipuè dicas.*"

December 25. In London, Charles Chauncey, M. D. Fellow of the College of Phyſicians, and of the Royal and Antiquary Societies.

1778.

January 1. Mr. Day, Surgeon at Saffron-Walden, Eſſex.

2. At Greenwich, John Green, M. D. Fellow of the College of Phyſicians, London.

10. At Upſal, of an ulceration of the urinary bladder, the celebrated Sir Charles Linnæus, Knight of the Polar Star, Phyſician

Phyſician to his Swediſh Majeſty, Profeſſor of Botany in the Univerſity of Upſal, and Member of the Academies of Stockholm, St. Peterſburgh, Berlin, Paris, London, &c. This learned and ingenious Phyſician was the ſon of a clergyman in Smolandria, a province of Sweden. In 1730, he was appointed, by the Upſal Society, to travel through Lapland, Norway, and other northern parts of Europe, in queſt of plants, and other natural curioſities. The reſult of this journey was the ſubject of his firſt publication, the *Flora Laponica*, which appeared in 1732. In 1735, he viſited England, and, during his ſtay in London, propoſed his Sexual Syſtem to Sir Hans Sloane, who rejected it. In 1742, he was choſen Profeſſor of Botany at Upſal, where he continued till his death, eſteemed and reſpected by his countrymen, and juſtly admired by the medical and philoſophical world. The Edinburgh Commentaries inform us, that at Upſal a general mourning took place on the death of this illuſtrious man, whoſe induſtry and genius had exalted the reputation of that ſeminary of literature to the higheſt pitch. His funeral proceſſion was attended by the whole Univerſity, as well profeſſors as ſtudents; and the pall was ſupported by ſixteen doctors of phyſic, all of whom had been his pupils.

For the very numerous catalogue of the works of this celebrated writer, we muſt refer our readers to Baron Haller's Bibliotheca Botanica, vol. II.

January 14. At Epſom in Surry, Frank Nicholls, M. D. Fellow of the College of Phyſicians, and of the Royal Society.

Some time in *January*, at Edinburgh, in his 25th year, Benjamin Beddome, M. D. a native of Glouceſterſhire, author of an inaugural Theſis *de Varietatibus Hominum*, printed at Leyden in 1777.

March 18. At Canterbury, Mr. Benjamin Chandler, ſen. Apothecary, aged 68 years.

24. At Bath, Samuel Sharpe, Eſq. F. R. S. and Member of the Royal Academy of Surgery at Paris; the celebrated author of a Treatiſe on the Operations of Surgery, the firſt edition of which was publiſhed in 1739; and of a Critical Enquiry into the preſent State of Surgery, which firſt appeared in 1750. Both theſe valuable works have gone through ſeveral editions, and have been tranſlated into different languages.

Mr. Sharpe was the pupil of the famous Cheſelden, and was for many years Surgeon to Guy's Hoſpital; but having acquired a conſiderable fortune, he quitted practice upwards of twenty years before his death, and went to reſide at Bath. In the years 1763 and 1764, he made the tour of Italy, and at his return publiſhed his Letters on that country, which prove him to have been a man of taſte and literature.

May 15. At Edinburgh, in his 20th year, Mr. Charles Darwin, a Member of the Medical Society of Edinburgh, and ſon of Dr. Darwin, a Phyſician of great eminence at Litchfield.

The

The reader will find ſome account of this very ingenious young man in the 19th number of the Medical Commentaries. The learned editor of that work, who had often admired the ſuperior talents and the unremitting induſtry of Mr. Darwin, tells us, it is hardly poſſible to conceive more unwearied attention to ſtudy than he uniformly exerted during three years reſidence at Edinburgh. To receive and to communicate information ſeemed to conſtitute his greateſt pleaſure.

About two months before his death Mr. Darwin had been honoured with the prize medal propoſed by the Æſculapian Society of Edinburgh, for the beſt eſſay on the means of diſtinguiſhing pus from mucus. This eſſay, which contained a variety of new and uſeful obſervations, deduced from actual experiments, ſufficiently proved the extenſive knowledge and abilities of the writer. From theſe experiments it appears that ſtrong vitriolic acid and water, diluted vitriolic acid, and cauſtic alkaline lixivium and water, will ſerve to diſtinguiſh pus from mucus; that the vitriolic acid can ſeparate it from coagulable lymph, and alkaline lixivium from ſerum.

" Hence, when a perſon has any expectorated matter, the compoſition of " which he wiſhes to aſcertain, let him diſ- " ſolve it in vitriolic acid, and in cauſtic alkaline lixivium; " and let him add pure water to both ſolutions. If there " be a fair precipitation in each, he may be aſſured that ſome " pus is preſent. But if there be a precipitation in neither, " it is a certain teſt that the mixture is entirely mucus. If " the matter cannot be made to diſſolve in alkaline lixivium " by time and trituration, we have alſo reaſon to believe " that it is pus."

Beſides this diſſertation, we are told that Mr. Darwin has left ſeveral other ſpecimens of his induſtry and genius, particularly a very elaborate paper on the pulſe, which was read to the Medical Society, and an eſſay on diabetes, which he intended as the ſubject of his inaugural diſſertation.

At Leeds in Yorkſhire, Joſeph Milner, M. D. aged upwards of eighty years.

June, In North America, Dr. Schroder, Firſt Phyſician to the Heſſian troops employed in that country.

24. At Saliſbury, Henry Hele, M. D.

July 17. At Canterbury, Mr. Edward Scudamore, ſen. Apothecary.

Auguſt 7. At Glaſgow, George Montgomerie, M. D.

15. At Barham in Kent, Mr. Thomas Varham, Surgeon and Apothecary.

September, At Doncaſter in Yorkſhire, Mr. George Dixon, Surgeon and Apothecary.

October 7. Dr. Martin Eccles, Fellow of the Royal College of Phyſicians at Edinburgh.

28. Mr. Anthony Nelſon, Apothecary in Holborn.

29, Mr.

October 29, Mr. Steadman, Apothecary in Southwark.

November, Mr. Peter Mow, Surgeon to the Savoy.

24, At Tottenham in Middlesex, Dr. Matthew Clarke, Fellow of the Royal College of Physicians, London.

28, At Bamff in Scotland, Dr. James Saunders, a Physician of considerable eminence, and father of Dr. Saunders of London. The reader will find an ingenious paper by this Physician in the third volume of the Medical Commentaries of Edinburgh, entitled, "An Account of the Effects of Electricity in different Diseases."

December 15, Dr. Robert Ramsay, of Brackraig, Fellow of the Royal College of Physicians, and Professor of Natural History in the University of Edinburgh. Dr. Ramsay graduated at Edinburgh in 1757, and was the author of an inaugural dissertation, *De Bile*.

28, In Cavendish-row, Dublin, aged fifty-two years, the learned and justly celebrated Dr. David Macbride, Fellow of the Royal Society of Medicine at Paris. This ingenious Physician practised midwifery at Dublin with distinguished reputation, and was the author of the following works.

"Experimental Essays on Medical and Philosophical Subjects." London, 8vo. 1764, 1767.

Translations of this work have been published in the French, German, and Italian languages.

"A Methodical Introduction to the Theory and Practice of Physic." 4to. London, 1772.

A Latin Translation of this work has been published at Utrecht, by Dr. Cloffius, in 2 vols. 8vo.

"An Account of the Reviviscence of some Snails, preserved many Years in Mr. Simons Cabinet." Phil. Trans. vol. LXIV.

"An Account of two extraordinary Cases after Delivery." Med. Obs. and Inq. vol. V.

Dr. Michael Dickson, Physician at Taunton in Somersetshire. Dr. Dickson graduated at Edinburgh in 1740, and was the author of an inaugural dissertation, *De Purgantibus*.

Other Deaths in 1778, the exact Dates of which we are not able to ascertain.

At Canterbury, aged 78, Mr. William Loftie, sen. formerly in considerable practice as a Surgeon, Apothecary, and Man-midwife, but had retired from business some years before his death.

At Paris, the ingenious Bernard de Jussieu, Doctor Regent of the Faculty of Physic, Demonstrator of Botany, and Member of the Royal Academy of Sciences at Paris; and Fellow of the Royal Society of London. Dr. De Jussieu was a native of Lyons, but studied at Paris, where he took the degree of Doctor in 1725, and continued till his death. He was the author of several ingenious papers printed in the Me-

moirs of the Academy, and the public are likewiſe indebted to him for an improved edition of Tournefort's, "Hiſtoire des Plantes des Environs de Paris." 2 tomes, 12mo. 1741.

At Paris, Paul James Malouin, Doctor Regent of the Faculty of Phyſic, Phyſician in Ordinary to the Queen of France, Member of the Academy of Sciences at Paris, of the Royal Society of London, and Profeſſor of Chemiſtry in the College of France. Dr. Malouin was a native of Caen in Normandy, and author of the following works, beſides ſeveral articles in the Encyclopedie, and the Memoirs of the Academy of Sciences:

"Traité de Chymie." Paris, 1734, 12mo.
"Chymie Medicinale." Ibid. 1755, 12mo. 2 tomes.
"L'Art du Boulanger" with Plates, Folio.

At Paris, Charles Francis Boutigny Deſpreaux, Doctor Regent of the Faculty of Phyſic.

——— Lewis Pathiot, Doctor Regent of the ſame Faculty.

At Brunſwick, Dr. Wagler, Firſt Phyſician to her Royal Highneſs the Ducheſs of Brunſwick. He had been long employed in a work on the gravid uterus, and had prepared a ſet of engravings on that ſubject, which are ſaid to be executed with the utmoſt accuracy and elegance.

1779.
February 16, At Greenwich, § Mr. Auſtin Mills, Surgeon.
March 14, At York, Mr. Thomas Brookes.
April 3, At Portſmouth, John Bowes, M. D.
